

D16A Schema Production Notes

The UN/CEFACT D16A schemas follow the Naming and Design Rules v2.1

As a result the following production changes have been made:

- a. The relative path schemas are published but the absolute path schemas are not published
- b. The unqualified data type schema no longer includes embedded codes
- c. The qualified data type schema module continues to include embedded code and identifier lists
- d. However, the codes and identifiers previously embedded in the unqualified data type schema are now included in the qualified data type schema
- e. These code list and identifier list schema modules can still be found in the code list and identifier schema folders
