D16B Schema Production Notes

The UN/CEFACT D16B schemas follow the Naming and Design Rules v2.1

As a result the following production changes have been made:

a. The relative path schemas are published but the absolute path schemas are not published

b. The unqualified data type schema no longer includes embedded codes

c. The qualified data type schema module continues to include embedded code and identifier lists

d. However, the codes and identifiers previously embedded in the unqualified data type schema are now included in the qualified data type schema

e. These code list and identifier list schema modules can still be found in the code list and identifier schema folders
