Dear Mr Waugh,

Re: Review of decision in response to request under SI 133 of 2007

This letter sets out the results of an internal review, conducted by myself, and is in response to your own request by letter dated 14th September that the decision of the Commission dated 10th September, 2010, be reviewed.

Your original request sought environmental information that supported the statement that “renewables will help to keep prices down” and that “renewables will give us security of supply”.

I have now had the opportunity to review the decision reached by the Commission. For this I have conducted a search of our records, requested relevant records from all relevant staff and specifically spoken to the Market Modelling Group responsible for the SEM pricing review who then conducted a search of their own physical files.

I can confirm from my review that the original decision issued on 10th September, 2010, constitutes the relevant records arising from the original request and that no further relevant records have been found on foot of my review.

Yours sincerely,

Paul McGowan
