**Economic Commission for Europe**

Inland Transport Committee

**Working Party on Customs Questions affecting  
Transport**

**Informal Ad hoc Expert Group on Conceptual and  
Technical aspects of Computerization of the TIR Procedure**

**Eighteenth session**

Geneva, 9–10 March 2011

Item 3.c of the provisional agenda

**Reference Model of the TIR Procedure**

**eTIR Reference Model - Version 3.0**

**Note by the secretariat\***

**Background**

This document presents the reference model for the TIR Procedure Computerization Project in accordance with the UN/CEFACT Modelling Methodology. The Reference Model will be expanded and refined as the work progresses and as feedback is received from modelling work carried out by the Informal ad hoc Expert Group on Conceptual and Technical Aspects of Computerization of the TIR Procedure (GE.1) and the network of eTIR focal points. The GE.1 is requested to consider and, possibly, validate version 3.0 of the Reference Model.

---

\* This document was submitted late due to the timing of the session.

<b>Introduction</b>	<b>10</b>
<b>a. Background to the document</b>	<b>10</b>
<b>b. Introduction to the reference model</b>	<b>17</b>
b.1. Phases and Workflows	18
b.2. Step by step approach applied to the UMM	19
b.3. Structure and updating of the document	20
b.4. Stakeholders responsibility chart	21
b.5. Review and validation status	22
<b>1. Business domain modelling</b>	<b>24</b>
<b>1.1 Vision</b>	<b>24</b>
1.1.1 Project title and abbreviation	24
1.1.2 Objectives	25
1.1.3 Boundary of the eTIR Project	25
1.1.3.1 Stakeholders	25
1.1.3.2 Information	26
1.1.4 Business Opportunity and Problem Statement	26
1.1.4.1 Technological developments in international transport, trade and Customs procedures	26
1.1.4.2 Efficiency of the TIR Customs transit procedure	27
1.1.4.3 The fight against fraudulent activities	28
1.1.5 References	29
1.1.6 Scope of the project	29
1.1.7 Constraints	30
1.1.7.1 Technical constraints	30
1.1.7.2 Political/legal constraints	31
1.1.7.3 Financial / Economic constraints	31
1.1.7.4 Other constraints	31
1.1.8 Stakeholders' needs	31
1.1.8.1 Needs of Customs administrations	31
1.1.8.2 Needs of the transport industry	32
<b>1.2 TIR procedure domain</b>	<b>32</b>
1.2.1 TIR Procedure package diagram	33
1.2.2 TIR Procedure package diagram description	33

---

<b>1.3 TIR Carnet life cycle use cases</b>	<b>34</b>
1.3.1 Actors of the TIR Carnet life cycle	34
1.3.1.1 International organizations and national associations	35
1.3.1.2 Competent authorities	36
1.3.1.3 TIR Carnet holder	37
1.3.1.4 Administrative Committee of the TIR Convention (AC.2)	37
1.3.2 TIR Carnet life cycle use case diagram	38
1.3.3 TIR Carnet life cycle use case description	38
1.3.4 High-level activity diagram of the TIR Carnet life cycle	39
<b>1.4 Elaboration of use cases</b>	<b>40</b>
1.4.1 Issuance and distribution use case	40
1.4.1.1 Issuance and distribution use case diagram	40
1.4.1.2 Issuance and distribution use case description	40
1.4.1.3 Activity diagram of the issuance and distribution use case	42
1.4.2 TIR transport use case	43
1.4.2.1 TIR transport use case diagram	43
1.4.2.2 TIR transport use case description	44
1.4.2.3 Activity diagram of the TIR transport use case	46
1.4.2.4 Structured description of activity diagrams of the TIR transport use case	47
1.4.3 Return and repository use case	48
1.4.3.1 Return and repository use case diagram	48
1.4.3.2 Return and repository use case description	48
1.4.3.3 Activity diagram of the return and repository use case	50
1.4.4 Discharge procedure use case	51
1.4.4.1 Discharge procedure use case diagram	51
1.4.4.2 Discharge procedure use case description	51
1.4.4.3 Activity diagram of the discharge procedure use case	52
1.4.4.4 Structured description of the activity diagram of the discharge use case	53
1.4.5 Start TIR operation use case	54
1.4.5.1 Start TIR operation use case diagram	54
1.4.5.2 Start TIR operation use case description	55
1.4.5.3 Activity diagram of the start TIR operation use case	57
1.4.5.4 Structured description of the activity diagram of the start TIR operation use case	58
1.4.6 Terminate TIR operation use case	59
1.4.6.1 Terminate TIR operation use case diagram	59
1.4.6.2 Terminate TIR operation use case description	60
1.4.6.3 Activity diagram of the terminate TIR operation use case	63
1.4.6.4 Structured description of the activity diagram of the terminate TIR operation use case	64
<b>1.5 Entry classes</b>	<b>65</b>

<b>1.6 High-level class diagram</b>	<b>65</b>
1.6.1 High-level class diagram description	65
1.6.1.1 International organization	65
1.6.1.2 Association	66
1.6.1.3 Road vehicle	67
1.6.1.4 Sealed loading unit	68
1.6.1.5 TIR transport	69
1.6.1.6 TIR operation	70
1.6.1.7 Goods Manifest Line Item	71
1.6.1.8 Customs office	72

## Introduction

### a. Background to the document

At its ninety-fifth session, the Working Party expressed the view that, following the conclusions of Phases I and II of the TIR revision process, the next logical step was to provide the TIR regime with the legal and administrative basis to allow for the use of modern information, management and control technology based on highly automated and secured electronic procedures. The Working Party recognized that computerization of the TIR procedure was inevitable (a) in the light of today's extremely rapid technological developments, based on Internet and Smart Card technologies, particularly affecting international transport and trade, (b) the ever increasing need for improved efficiency of Customs transit procedures and (c) the fight against fraudulent activities which must be conducted with the most appropriate and effective means (TRANS/WP.30/190, para. 26).

The Working Party felt that the existing and widely varying national Customs procedures, administrative practices and legal requirements in the Contracting parties to the Convention should be taken into account during this process. Computerization of the TIR procedure, based on the TIR regime as revised during Phases I and II of the TIR revision process, would therefore have to focus on the possibility of linking national Customs transit procedures via a standard electronic and/or paper-based data file containing all information of the TIR Carnet. The newly to be created electronic data file would need to be compatible with most if not all possible technical EDI solutions applied or yet to be applied in the Contracting Parties (TRANS/WP.30/190, para. 27).

The link between national Customs procedures and the transfer of data files should be possible via (a) international EDI systems, as is being done in the New Computerized Transit System (NCTS), (b) Smart Cards that could be filled-in and carried along by the transport operator as well as filled-in, read and validated by Customs authorities or (c) the present paper-based TIR Carnets, possibly supplemented by bar-code and TIR Carnet holder identification system (TRANS/WP.30/190, para. 28).

The Working Party was of the view that, whatever system is to be used, the approach taken in computerization of the TIR regime must be courageous and forward looking and should be able to accommodate all possible technological solutions likely to be implemented in the years ahead (TRANS/WP.30/190, para. 29).

In order to make solid progress in this complex field, the Working Party decided to follow established practice and to establish an ad hoc group of experts on the computerization of the TIR regime which should be composed of experts from interested countries and industry groups (TRANS/WP.30/190, para. 30).

The Working Party, at its ninety-sixth session, felt that the expert Group, after having highlighted weaknesses and limitations of the current system, should, in particular:

- identify the objectives, procedures and required resources for the computerization of the TIR procedure and determine the role of the various actors (secretariat, Governments, IRU, etc.) in this process;
- analyze all administrative and legal requirements relevant for the computerization of the TIR regime;
- study suitable technological solutions in this respect, and
- take account of experiences made with similar automated systems at the national as well as at subregional levels, such as the NCTS, with a view to preparing possible

alternative solutions and scenarios, specifying the benefits as well as the disadvantages of the various approaches (TRANS/WP.30/192, para. 37).

The ad hoc Expert Group (hereafter referred to as “Ad hoc Group”) met twice in 2001, on 19 February and on 21 June.

With regard to the objectives of the computerization process, the Ad hoc Group decided that those identified by the Working Party at its ninety-fifth session had kept their validity TRANS/WP.30/2001/13, paras. 13-14).

The Ad hoc Group reconsidered the fundamental approaches for computerization of the TIR procedure and agreed that, knowing that computerization of the TIR procedure was a continuing process, involving various stages of development, none of the options could be excluded for the time being. Efforts should be pursued at the national level to prepare the national Customs legislation for the acceptance of electronic data processing and interchange techniques and the electronic signature (TRANS/WP.30/2001/13, paras. 18-19).

The Ad hoc Group acknowledged that, regardless of the finally selected approach, from a legal point of view, the amount of changes to be made to the TIR Convention could be limited and that it would basically be sufficient to amend the Convention with either a definition of the TIR Carnet, that would include the use of portable electronic files or introduce one new article which would allow for the use of new technologies in general, including the acceptance of electronic signatures, leaving the existing text of the Convention as it stands. Special provisions dealing with the legal and technical specification of the accepted new technologies could be inserted into a separate, newly to be created Annex (TRANS/WP.30/2001/13, para. 23).

With regard to the role played by the various actors in the computerization process, the Ad hoc Group agreed that the computerization process would have consequences for the persons and organizations dealing with the issuance and organization and functioning of the guarantee system, as well as for Customs authorities, whose task it is to check and process the provided data and ensure the goods’ unaltered arrival at the Customs office of destination. In addition, the use of automated risk management would influence the work of Customs authorities and associations at the national level, as well as the work of the international organization, the insurers and the TIRExB. However, the Ad hoc Group felt that at that time it was not appropriate to pursue this subject, as it depended on a variety of, as yet unknown, factors (TRANS/WP.30/2001/13, paras. 26-27).

On the basis of the outcome of the work performed by the Ad hoc Group, the Working Party mandated the secretariat to convene meetings of special expert groups. These special groups should address the two major problems the Ad hoc Group had encountered in the pursuit of its work:

- To study the conceptual and technical aspects of the computerization process of the TIR Procedure, including the financial and administrative implications of its introduction, both at the national and at the international level, and prepare a draft of electronic messages to allow for an interchange of electronic data, nationally, between Contracting Parties and with international organizations;
- To study in detail the impact of the various approaches that had been identified by the Ad hoc Group on the existing legal text of the TIR Convention as well as the repercussions it could have on international private law, national administrative procedures and to draft a description of the role that the various actors (in particular: national associations, international organization, insurers and TIRExB) could play in the TIR Convention, once the paper-based system would be complemented and/or

replaced by a system functioning on the basis of the electronic interchange of information (TRANS/WP.30/2001/13, para. 31).

On the basis of this mandate, the Informal ad hoc Expert Group on Conceptual and Technical Aspects of Computerization of the TIR Procedure (hereafter referred to as "Expert Group"), at its first session, adopted its Terms of Reference, which stipulate that the Expert Group shall:

- List and analyse the data elements required for the operation of a TIR transport at the national and international level, as stipulated in the TIR Convention as well as in resolutions and recommendations, adopted by the Administrative Committee (in particular Annexes 1,4, and 9 of the TIR Convention) and make an inventory of possible new features which could be included into the electronic version of the TIR procedure. On that basis, the group shall draw up flow charts, reflecting the actual and future stages of the TIR procedure. Within the context of its work, the group shall also study the use of standardized codes, ensuring a uniform understanding and interpretation of the data elements in the TIR Carnet.
- List and analyse the existing information and telecommunication systems and study to what extent the experiences gained at the national and international level can be included in the development of a computerized TIR procedure.
- Prepare conclusions with regard to the computerization of the TIR procedure, reflecting the results of the work under (a) and (b) and taking account of the financial implications they might have on the national and international level (TRANS/WP.30/2002/11, annex 1)

The Informal ad hoc Expert Group on the Legal Aspects of Computerization of the TIR Procedure shall:

- Study in detail the impact of the various approaches of the computerization process on the existing legal provisions of the TIR Convention as well as the repercussions it could have on national administrative procedures;
- Draft a description of the role the various actors (in particular: national association, international organization, insurers and TIRExB) could play in the TIR Convention, once the paper based system would be complemented and/or replaced by a system functioning on the basis of the electronic interchange of information (Terms of reference still to be adopted).
- Both informal ad hoc Expert Groups shall report to the Working Party on the progress of their work. At the completion of its work, each ad hoc Expert Group shall draw up a working document containing concrete proposals for further action, to be discussed and approved by the Working Party.

At its second meeting, the informal ad hoc Expert Group on Conceptual and Technical Aspects of Computerization of the TIR Procedure discussed at length the conceptual and hierarchical data models, describing the information contained in the TIR Carnet, but felt it could not reach agreement on any of them. Some experts questioned the usefulness of such complex models, whereas others expressed the view that they were not in a position to judge to what extent the models actually represented the structure of information in the current TIR Carnet. For these reasons, the Expert Group decided to revert to this matter at a later stage and mandated the secretariat to organize a meeting with some IT specialists to study which model is best suited for the purposes of the Expert Group. The Expert Group further welcomed the secretariat's proposal to use in the future the Unified Modelling Language-standard (UML) (ExG/COMP/2002/10, paras. 11 and 12).

At their meeting, which took place on 3 July 2003, the IT specialists held an extensive exchange of views on the suitability of the, UML based, UN/CEFACT Modelling Methodology (UMM) as a methodology to model business processes like the TIR procedure. As such, UMM provides a procedure for specifying, in an implementation-independent manner, business processes involving information exchange. Although the IT specialists noted that it could be worthwhile to study other methodologies, they recognized that the process of selecting a methodology is very complex and time consuming. They agreed that this work has already been done by the UN/CEFACT team in the elaboration of UMM and that UMM offers the necessary tools to describe the TIR business process, a uniform approach for the work of the Expert Group and a valuable base for future improvements in the TIR procedure. Seeing that the activities, undertaken by the Expert Group so far, fitted well into UMM, and that the approach endorsed by the Expert Group in the project overview was in line with the UMM, they invited the secretariat to prepare a first draft document for discussion by the Expert Group at its forthcoming meeting. The scope of the first phase of the work of the Expert Group being the analysis of the current system - the 'as-is' description of the TIR procedure - the IT specialists decided to limit this first document to the Business Domain Modelling, the first step in UMM. Furthermore, the IT specialists recommended having a full implementation of the methodology, including a first descriptive part describing the so-called 'vision' of the project. Moreover, they emphasized the necessity to adapt UMM, as it would be necessary with any other methodology, to the particulars of the TIR business process (ExG/COMP/2003/2, para. 6).

At its one-hundred-and-fifth session, the Working Party was informed orally of the progress made by the Expert Group at its third meeting, which took place on 1 and 2 September 2003 in Budapest. The Working Party endorsed the work undertaken by the Expert Group and took particular note of three issues, where the Expert Group had expressed that it needed further guidance from the Working Party. These issues were:

(a) the definition of the scope of the project, which had been formulated by the Working Party as being "the computerization of the TIR Procedure". The Expert Group felt that the Working Party should clarify in more detail what was meant exactly by this wording. Within this context, the Expert Group also noted that the term "TIR Procedure" was an undefined term, making it impossible to describe exactly the boundaries of the project;

(b) The description of the approach on how to achieve the computerization of the TIR Procedure. In view of political and technical developments, having taken place over the last few years, the Working Party was requested to provide a more detailed guidance to the Expert Group on which approach the computerization project should pursue;

(c) The title of the project. For practical reasons, the secretariat had proposed to refer in the future to the "eTIR Project" as a short name for the project to computerize the TIR Procedure. The Expert Group felt it was not in a position to decide on this issue and decided to refer the matter to the Working Party for further discussion (TRANS/WP.30/210, paras 27-31)

At its one-hundred-and-sixth session, the Working Party confirmed that:

(a) the final objective of the computerization of the TIR procedure encompasses the computerization of the whole TIR Carnet life cycle from distribution issuance and via the TIR transport to return and repository and that it should, ultimately be aimed at replacing the current paper TIR Carnet. The Working Party agreed that the process to achieve this objective may be challenging, requiring the input of considerable human and financial input, both at the international and the national level. Therefore, the Working Party agreed that a step-by-step approach seemed the only feasible alternative to achieve any tangible results in the near future. To that end, it mandated the secretariat, as a first

step, in cooperation with the Expert Group (a) to work out concrete proposals on how to exchange the so-called 'static' data-elements contained in the TIR Carnet (data elements which remain unchanged throughout the TIR Transport) between the competent authorities of Contracting Parties, possibly also including the data contained in the ITDBOnline as a preliminary step, (b) to conduct a feasibility study on the practicability of such proposals and, ultimately, (c) to propose a pilot along one of the major transit corridors to implement them.

The Working Party agreed that, as a next step, the integration of the so-called 'dynamic' data elements (data elements which may be amended or updated in the course of the TIR Transport) should be considered. Further steps should then address the issue of inclusion of additional features, such as security related information and advance cargo information.

Once these tangible steps had been achieved, the Expert Group could focus its attention on further, outstanding, issues in relation to the computerization of the TIR procedure.

(b) The Working Party agreed that the approach of the computerization process should, until further notice, be focused on the establishment of an international, centralized database, whose aim it should be to facilitate the secure exchange of data between national Customs systems. At a later stage, the sharing and exchange of data with other bodies concerned (such as TIRExB, international organizations, national associations and the international guarantee), should not be excluded.

(c) The Working Party agreed that the Project to Computerize the TIR Procedure could, in future, be referred to as "eTIR-project" (TRANS/WP.30/212, para. 26).

At its thirty-sixth session, the Administrative Committee was informed about progress made in the preparation of Phase III of the TIR revision process within the UNECE Working Party (WP.30) and its Ad hoc Group of Experts on Computerization of the TIR Procedure. The Committee endorsed the mandate given by the Working Party to the Informal Ad hoc Expert Group (a) to work out concrete proposals on how to exchange the so-called 'static' data elements contained in the TIR Carnet (data elements which remain unchanged throughout the TIR Transport) between the competent authorities of Contracting Parties, possibly also including the data contained in the ITDB Online as a preliminary step, (b) to conduct a feasibility study on the practicability of such proposals and, ultimately, (c) to propose a pilot along one of the major transit corridors to implement them. As a next step, the integration of the so-called 'dynamic' data elements (data elements which may be amended or updated in the course of the TIR Transport) should be considered. Further steps should then address the issue of inclusion of additional features, such as security and advance cargo information.

Once these tangible steps have been achieved, the Expert Group could focus its attention on further outstanding issues in relation to the computerization of the TIR procedure.

The Administrative Committee endorsed the opinion of the Working Party that the approach of the computerization process should, until further notice, be focused on the establishment of an international, centralized database, whose aim it should be to facilitate the secure exchange of data between national Customs systems. At a later stage, the sharing and exchange of data with other bodies concerned (such as TIRExB, international organizations, national associations and the international guarantee), should not be excluded.

The Administrative Committee endorsed the Working Party's decision that the Project to computerize the TIR Procedure could, in future, be referred to as "eTIR-project" (TRANS/WP.30/AC.2/73, paras 38–41).

At its sixth session, the Expert Group established that, with the exception of Chapters 1.1.7 and 1.1.8, it had completed its work on Chapter 1 of the Reference Model and that it would dedicate its future work to the remaining Chapters, unless new, as yet unknown, information would require a re-assessment of Chapter 1 (ExG/COMP/2004/24, para. 15).

At its one-hundred-and-tenth session, the Working Party took note that the first part of the work of the Expert Group, encompassing the description of the current TIR procedure, had been finalized (TRANS/WP.30/220, para. 30).

At its one-hundred and thirteenth session, the Working Party adopted document TRANS/WP.30/2005/32-TRANS/WP.30/AC.2/2005/18, containing Chapter 1 of the Reference Model for the eTIR Project, with the understanding that further chapters will be included at a later stage of the project, subject to approval by the Working Party, and that a number of points of the document will be updated to reflect recent developments and as the eTIR Project develops over time.

The Working Party was of the opinion that there was no reason to review the mandates and opinions provided, so far, by the relevant TIR bodies in the computerization process. The Working Party felt that the mandate should remain dynamic, thus providing full freedom to the Expert Group to analyze and develop its ideas on a technical level and to take into account technical innovations that could be advantageous for the development of the project.

The Working Party confirmed that the eTIR Project should evolve around the establishment of an international centralized database in order to facilitate the secure exchange of data between national Customs systems. Furthermore, Contracting Parties agreed that the management of data on guarantees, once the guarantor had issued a guarantee to an operator, should lie with Customs (ECE/TRANS/WP.30/226, paras. 34, 35 and 41).

At its forty-second session, the Administrative Committee considered document ECE/TRANS/WP.30/AC.2/2006/13, containing an overview of the mandates and opinions provided, so far, by the relevant TIR bodies in the computerization process. The Administrative Committee noted the concerns of some Contracting Parties with regard to the legal and financial aspects linked to the introduction of the eTIR system and the differences in technological development between countries, which might lead to possible complications and delays at the time of implementation at the national level. The Committee also noted the concerns by the international organization and its member associations with regard to their role in the eTIR system. The Administrative Committee stressed that the eTIR system should meet the requirements of all Contracting Parties to the Convention. The Committee decided to include in the guidelines for the computerization of the TIR system the part of the statement of the UNECE Executive Secretary at the opening of the present session referring to the computerization of the TIR system. The Committee endorsed the document and the following list of guidelines:

- Maintenance of the basic philosophy and structure of the TIR procedure, safeguarding and, possibly, strengthening the provisions of the TIR Convention, particularly those prepared under Phases I and II of the TIR revision process (TRANS/WP.30/194, para. 36);

- Computerization of the whole TIR Carnet life cycle from distribution, issuance and via the TIR transport to return and repository, aimed at, ultimately, replacing the current paper TIR Carnet (TRANS/WP.30/212, para. 26);
- The establishment of an international, centralized database, the aim of which should be to facilitate the secure exchange of data between national Customs systems (TRANS/WP.30/212, para. 26);
- The management by Customs of data on guarantees, once the guarantor has issued a guarantee to an operator (ECE/TRANS/WP.30/226, para. 41);
- The development of the eTIR system, which connects existing and future Customs IT systems, should be realized with an appropriate level of connectivity with the existing TIR related IT systems (ECE/TRANS/WP.30/AC.2/85, para. 38).

At its one-hundred-and-seventeenth session, the Working Party considered document ECE/TRANS/WP.30/2007/16-ECE/TRANS/WP.30/AC.2/2007/15, submitted by the secretariat, containing Chapter 2 of the eTIR Reference Model and adopted the document, subject to the deletion of the asterisks and corresponding footnotes in Chapter 2.1.2.2.3. and 2.1.2.4.2. The Working Party decided that the adopted Chapter 2 could be revised at any time (see ECE/TRANS/WP.30/234, para. 22). The Administrative Committee, at its forty-fourth session, endorsed the Working Party's decision (see ECE/TRANS/WP.30/AC.2/91, para. 19).

At its 116<sup>th</sup> session, the Working Party requested the Informal Ad hoc Group on Conceptual and Technical aspects of Computerization of the TIR Procedure (further referred to as "the Expert Group") to start working on Chapter 3 of the Reference Model, dedicated to the analysis of the e-Business-Requirements as contained in Chapter 2 (see ECE/TRANS/WP.30/232, paragraph 32).

At its thirteenth session, the Expert Group welcomed a first draft of Chapter 3 of the Reference Model as contained in document ECE/TRANS/WP.30/GE.1/2007/13. After an in-depth discussion, the Expert Group mandated the secretariat to align draft Chapter 3 with its findings, to propose data elements and a structure for the identified electronic messages and to draft the fall-back scenarios sequence diagram, for consideration at its next meeting (ECE/TRANS/WP.30/GE.1/2007/16, paras. 7-9).

At its fourteenth session, the Expert Group welcomed the revised Chapter 3, contained in document ECE/TRANS/WP.30/GE.1/2007/13 Rev.1 as well as the proposals for additional security elements in Informal Document GE.1 No.2 (2008). It reviewed the draft fall-back scenarios and the messages. It also mandated the secretariat to align Chapter 3 with its findings, to propose code lists for messages and to amend the class diagrams and messages with security data elements in a revised Chapter 3, for consideration at its next meeting (ECE/TRANS/WP.30/GE.1/2008/3, paras. 8-9).

At its fifteenth session, the Expert Group mandated the secretariat to organize a drafting group whose task would be to finalize the draft of Chapter 3, taking into account the findings of the Expert Group. At the kind invitation of Serbian Customs, the drafting group met in Belgrade on 28-29 January 2009. The drafting group reviewed each and every UML diagram, revisited the fall-back procedure and revised the messages. It provided the secretariat with clear instructions on how to further revise document ECE/TRANS/WP.30/GE.1/2007/13 Rev.2.

At its 121<sup>th</sup> session, the Working Party considered document ECE/TRANS/WP.30/2008/8/Rev.2, containing clarifications on the method of submission of the Customs declaration as described in Chapter II of the eTIR Reference Model, prepared by the secretariat on instructions from GE.1 at its fifteenth session. There was general consensus that the document provided the necessary clarifications. At the request of

Formatted: Indent: First line: 1 cm

the Working Party, these clarifications will be added as Annex to the eTIR Reference Model (See ECE/TRANS/WP.30/242, paragraph 27).<sup>1</sup>

At its sixteenth session, the Expert Group revised documents ECE/TRANS/WP.30/GE.1/2007/13 Rev.3, ECE/TRANS/WP.30/GE.1/2009/3 and informal document GE.1 No. 1(2009), containing the various parts composing Chapter 3 of the Reference Model. It also requested experts to provide further inputs to the secretariat after the meeting and before a new revision of Chapter 3 would be issued.

At its 122nd session, the Working Party was informed that GE.1 was of the firm opinion that the so-called “push approach was the only viable solution to ensure that the information exchange with and within the eTIR international system takes place in real time. Only the “push” approach would allow that information is sent in real time from one system to another with a direct and traceable acknowledgement of receipt. The Working Party endorsed this opinion, thus ensuring that the information sent in real by the Customs office of departure, after it has accepted the Customs declaration, will be duly acknowledged upon receipt of the advance cargo information, by all Customs authorities involved in the TIR transport (See ECE/TRANS/WP.30/244, paragraph 28).

At its seventeenth session, the Expert Group welcomed the final version of Chapter 3 of the eTIR Reference Model, contained in document ECE/TRANS/WP.30/GE.1/2010/2, and took note of the amendments brought to the messages thanks to the kind assistance of Mr. Hans Greven from the Dutch Customs authorities, thus ensuring full alignment with version 3 of the WCO transit data model.

On the basis of document ECE/TRANS/WP.30/GE.1/2010/2 and the assistance of Dutch Customs, the secretariat prepared the version of chapter 3 contained in this document. It contains a few additional amendments, mainly those presented in Chapter 3.2.7, introduced to solve issues unveiled while preparing Chapter 4 of the reference model.

## **b. Introduction to the reference model**

Just as it is not possible to build a decent and secure house without a proper plan, which has been drawn up by a qualified architect, it is not possible to computerize a system without first designing the necessary models, outlining all the elements and procedures of which it consists. And just as the construction of a small garden shed does not require the same planning as the construction of a hundred storey high commercial building, different systems will require different modelling techniques, in function of their aim and complexity.<sup>2</sup>

This document contains the full description of the TIR Procedure Computerization Project.

The business process modelling methodology applied to draw up this document is based on the UN/CEFACT Modelling Methodology (UMM). UMM in its turn is based on the Unified Modelling Language (UML) from the Object Management Group (OMG) and is derived from the Rational Unified Process (RUP) developed by Rational Corporation. As such, UMM provides a procedure for specifying/modelling business processes in a protocol-neutral, implementation-independent way.

Business Modelling provides a formalized way to describe how the TIR procedure operates and thus enables a common understanding of its key features and requirements. It

<sup>1</sup> See Annex VI.

Formatted: French (Switzerland)

Formatted: No widow/orphan control, Tab stops: 1.8 cm, Right + Not at 1.8 cm

can be used as a tool to provide a range of e-business solutions covering all or part of the TIR procedure and based on a variety of technologies. The models also facilitate the detection of opportunities for simplification and harmonization.

This document is first intended to facilitate the work of the Informal ad hoc Expert Group on Conceptual and Technical Aspects of Computerization of the TIR Procedure and to provide modelling support. In addition, it should facilitate the future work to be undertaken by the Informal ad hoc Expert Group on Legal Aspects of Computerization of the TIR Procedure. The final version of the Reference Model will be submitted to the Working Party on Customs Questions affecting Transport (WP.30) and the Administrative Committee for the TIR Convention (AC.2) for endorsement as well as being a reference for any future work in the eTIR Project. In addition, every single chapter of the Reference Model will, upon completion, be submitted for endorsement to the WP.30 (see Table 0.3).

#### b.1. Phases and Workflows

According to Rational Unified Process and UMM, every project passes through a series of standard phases. The phases are inception, elaboration, construction and transition. For each phase, a number of workflows is required. The workflows identified for computerization projects are: Business Domain Modelling, e-Business requirements, Analysis, Design, Implementation, Test and Deployment. The UMM focuses on the inception and elaboration phases and limits itself to the first four workflows, not encompassing the Implementation, Test and Deployment workflows. The description of the work during every phase, indication the main or 'high-level' activities, is shown in Table 0.1.

Table 0.1  
Activities associated with each phase

Phase	High-level activities
Inception	<ul style="list-style-type: none"> <li>○ Idea is conceived, and initially documented using the UMM.</li> <li>○ Main workflows are: 1) Business Domain Modelling, and 2) e-Business requirements.</li> </ul>
Elaboration	<ul style="list-style-type: none"> <li>○ Idea is further refined and expanded</li> <li>○ Main workflows are: 1) Analysis, and 2) Design</li> <li>○ The outcome – deliverables – is compared with the already defined models, requirements and references contained in the 'repository'</li> <li>○ New models or enhancements to existing models are incorporated into the repository</li> </ul>
Construction	<ul style="list-style-type: none"> <li>○ Messages are designed</li> <li>○ Software development</li> <li>○ Main workflows are: 1) Implementation, 2) Testing, and 3) Deployment</li> </ul>
Transition	<ul style="list-style-type: none"> <li>○ Testing</li> <li>○ Main workflow is Deployment</li> </ul>

In the Inception and Elaboration phases, the UMM concentrates on workflows needed to understand the business needs to produce business scenarios, business objects and areas of business collaboration. They are:

- Business Domain Modelling
- e-Business requirements
- Analysis
- Design

Within each of these workflows a set of deliverables is produced (see Table 0.2). The whole process is iterative so that additions and changes can be validated and incorporated into any of the workflows as they are discovered. Additions and changes should be a natural result of maintenance and enhancement.

Table 0.2  
**Deliverables**

<i>Deliverables</i>	<i>Business Domain Modelling Workflow</i>	<i>e-Business requirements Workflow</i>	<i>Analysis Workflow</i>	<i>Design Workflow</i>
Package diagram	x			
Class diagram	x	x	x	x
Use case description	x	x	x	
Use case diagram	x	x	x	x
Sequence diagram			x	x
Collaboration diagram			x	x
Statechart (state machine) diagram			x	x
Activity diagram	x	x	x	x
Component diagram				x
Deployment diagram				x
Requirements list	x	x	x	
Glossary	x	x	x	

Every workflow focuses on specific aspects of the project. The Business Domain Modelling describes the scope of the project within the whole system, enabling a common understanding of the functioning of the current TIR procedure – the “as-is” situation – to all ‘stakeholders’ and defines the high-level business requirements. The e-Business requirements workflow captures the detailed user requirements in the computerized environment to be developed and further elaborates the use cases described in the previous phase of the work. The third workflow, the Analysis, translates the requirements identified in earlier phases into specifications that can be followed by software developers and message designers. Finally, in the Design workflow, the specification devised during the Analysis workflow will be used to develop the messages and the collaborations required to exchange these messages.

Each and every workflow will be terminated by a formal validation by the relevant bodies.

#### **b.2. Step by step approach applied to the UMM**

At its one-hundred-and-sixth session, the Working Party agreed that, in the light of the complexity of the project and in order to achieve tangible results in the near future, a step-by step approach was the only feasible way to address the eTIR Project.

Formatted: Space After: 2 pt

As stated in the introduction to Chapter b, the UMM methodology is mainly based upon the Rational Unified Process (RUP), which originally has been used in the field of software engineering. The eTIR Project, although not being a software engineering project, nevertheless is confronted with many similar problems with regard to the complexity of the issues at stake. In order to address complex problems, software engineers usually issue a first version of a software, tackling the main issues. With every new release, they add functionalities to the software with a view to advance towards reaching the final objectives of the project.

In the eTIR project, the various steps to be undertaken to achieve results in the project may be considered as being equivalent to the various releases of software. Therefore (and in accordance with the RUP), every single step, after it has been clearly defined, will be considered as a specific sub-project and will have to pass through all phases of a project lifecycle. All sub-projects share the same final objectives but each individual sub-project contains different elements to achieve them.

### **b.3. Structure and updating of the document**

The underlying document follows the methodology and structure presented above. The four main chapters correspond to the four workflows of the Inception and Elaboration phases. In addition, a number of annexes also forms part of the present Reference Model.

The requirements list and the glossary (TIR glossary) are two key cross-reference documents which are used throughout the process to ensure that all business requirements, terms, and definitions are recorded. These two documents are maintained as and recorded in Annexes 1 and 2 respectively.

Annex 3 contains the data elements records.

Annex 4 contains a UML Symbols Glossary, describing the specific terms and symbols of the language to allow non-UML literates to understand the numerous diagrams contained in this document.

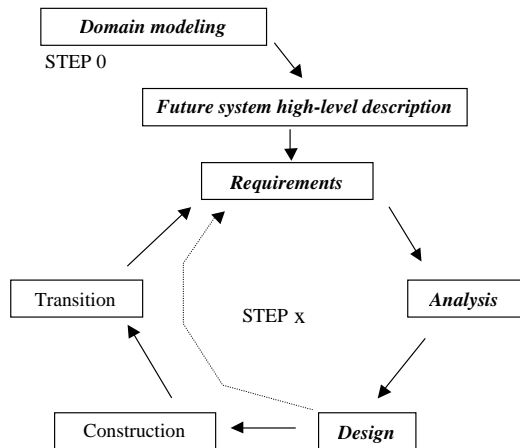

Annex 5 contains a UMM/UML Glossary, describing the specific terms used by the UMM methodology.

Annexes 6 and 7 contain the lists of, respectively, figures and tables contained in underlying document.

In Annex 8 the reader can find all references to the documents used to elaborate this document.

The Reference Model will contain the results of each work phase, in line with the description in Chapter b.1. and in accordance with the decisions by the Expert Group. In view of the step-by-step approach, described in Chapter b.2., the Reference Model will be amended by means of an iterative process, as shown in Figure 0.1.

Figure 0.1  
Step-by-step iterative approach of UMM

Because UMM does not go beyond the design phase of projects, the actual construction and transition phases are beyond the scope of the eTIR Project. Thus, the Expert Group can already start drafting the requirements of the next step before the previous step will actually be in production (see dashed line in Figure 0.1.).

A step-by-step approach can only be successful if all steps, necessary to achieve the final goal, are well defined before starting the actual work. Therefore, the introduction to Chapter 2 contains the description of the different steps of the project and explains how these steps will complement each other in order to achieve the overall objectives of the eTIR Project.

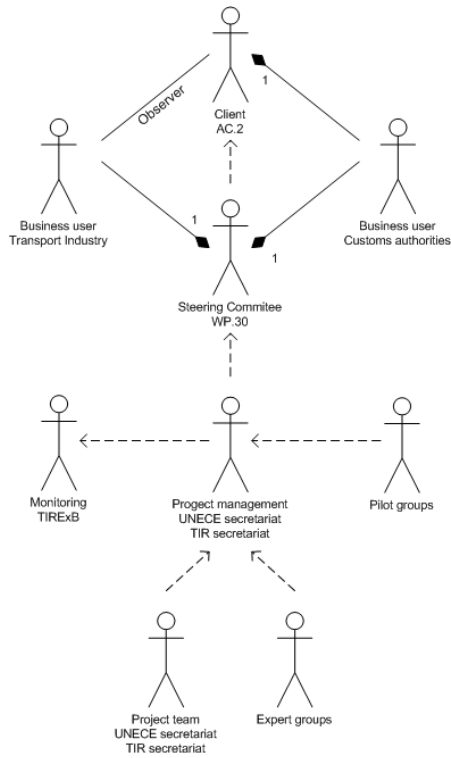

*In addition, some chapters or annexes may be added in the future to reflect the specificities of the TIR Procedure Computerization Project.*

*Moreover, the existing systems identified during the domain modelling phase will have to be taken into account during the Analysis and Design phases of every step to avoid superfluous or incompatible developments. It is important to recall that the eTIR project is not a so-called "Greenfield" project.*

#### b.4. Stakeholders responsibility chart

The computerization of the TIR Procedure is a project involving numerous stakeholders. Most of them have specific roles to play in the project and they are interdependent. Figure 0.2 shows the roles of the stakeholders and dependencies between them; dependency arrows also indicate the reporting directions, in other words, who reports to whom.

Figure 0.2  
Stakeholders responsibility chart

**b.5. Review and validation status**

The table below presents the revisions and the validation dates for the various parts and versions of the reference model.

Table 0.3

## 1. Business **d**Domain **m**Modelling

The purpose of the Business Domain Modelling workflow is:

- To present the scope of the project;
- To understand the structure and dynamics of processes within the current TIR procedure;
- To ensure that all stakeholders involved have a common understanding of the current TIR procedure;
- To understand the daily business in the TIR procedure, without reference to an electronic solution;
- To formulate the high-level business requirements which will serve as a basis for a subsequent detailed analysis.

In an international project such as the computerization of the TIR procedure, it is absolutely indispensable that every stakeholder involved has a common vision of the project. Therefore, the first part of the Business Domain Modelling describes this vision in light of the background and the mandates given to the various groups involved.

Once the vision is clearly defined, the high-level analysis of the TIR procedure domain can be undertaken, followed by a more detailed analysis enabling a deeper understanding of the functioning of the TIR procedure. To this end, the domain is divided into areas and a use case analysis is drawn up for each area of interest. Already at this level some areas will be left aside because they are not part of the scope of the project. The requirements list and the TIR glossary are also filled-in accordingly. The list of entity classes and the high-level class diagram, established during this workflow, contribute to the development of the TIR glossary.

Deliverables from the Business Domain Model workflow include:

- Scope of the Business Domain and the boundaries of the project;
- Business Domain use case diagram with its description and business domain activity diagram;
- Use case diagram, use case description and activity diagram for each area;
- TIR entity classes, definitions and a high-level class diagram;
- List of business requirements (including non-functional requirements);
- TIR glossary.

### 1.1 Vision

This first part of the work aims at reaching agreement on the objectives, the business needs and the scope of the business domain. This also involves identifying the business opportunities and specifying the boundaries of the business domain being modelled.

#### 1.1.1 Project title and abbreviation

The title given by the WP.30 to the project is:

**TIR Procedure Computerization Project**

The abbreviation used for the project is:

*eTIR***1.1.2 Objectives**

This chapter gives a brief description of the purpose of the project.

The final objectives of the eTIR Project are:

- Integrating the computerized TIR procedure in the overall process of technological development in international transport, trade and Customs procedures:
  - Simple and cost effective data capture and data transmission;
  - Facilitation of global intermodal application of the TIR Procedure;
  - Real time exchange of information among actors.
- Improving the efficiency and quality of the TIR procedure:
  - Reduction of processing times at border crossings and final destination;
  - Increased efficiency of internal administrative and control procedures;
  - Increased accuracy and reduction of errors;
  - Reduction of costs;
  - Progressive replacement of paper TIR Carnet;
  - Full use of international standard codes in order to eliminate language barriers;
  - Availability of advance cargo information.
- Reducing the risk of fraud and improving security:
  - Automatic generation of data for risk assessment;
  - Facility to implement early-warning system;
  - Easy access to information for control and risk management purposes.

**1.1.3 Boundary of the eTIR Project**

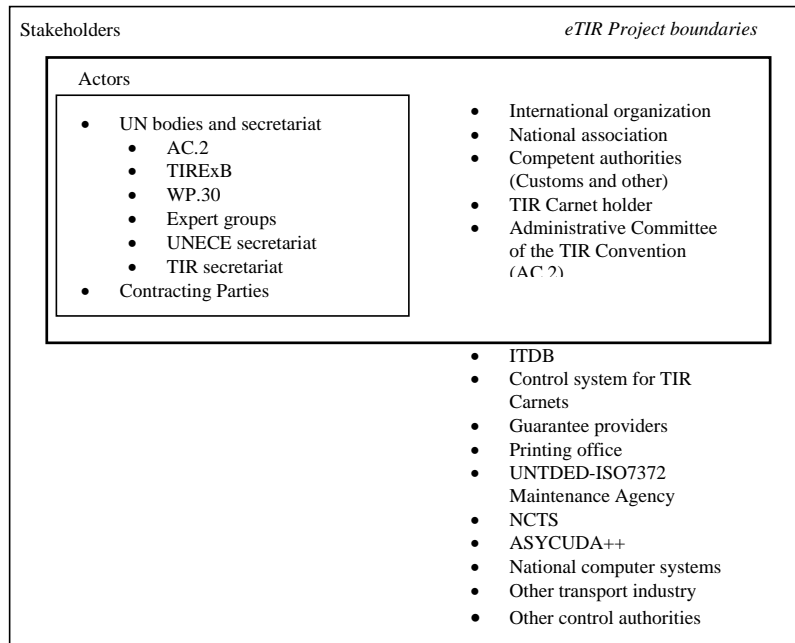

The final objective of the eTIR project encompasses the computerization of the whole TIR Carnet life cycle (from issuance and distribution via the TIR transport to return and repository) and is ultimately aimed at replacing the current paper TIR Carnet. However, the eTIR Project will inevitably have repercussions on other parts of the TIR Procedure. Therefore, it is important to identify the boundaries of the project in order to realize the full impact the project may have and to ensure that the views of all stakeholders are taken into due account. The boundaries are defined along two axes: stakeholders and information

*1.1.3.1 Stakeholders*

A stakeholder is defined as someone (or something) who is materially affected by the outcome of the system but may or may not be an actor of the system. Actors are stakeholders who are involved in the specific project as users and are thus part of the Reference Model. Stakeholders inside the boundary of the system are involved in the project as active participants in the work and/or members of decision-making bodies; those outside the boundary may participate in meeting to ensure any future compatibility where necessary.

Figure 1.1 shows the stakeholders inside and outside the boundaries of the project and emphasises those who are also actors.

Figure 1.1  
Stakeholders and actors

#### 1.1.3.2 Information

The data elements inside the boundaries have already been identified and are listed in Annex 3 of the Reference Model (source: the report of the Second meeting of the Expert Group (ExG/COMP/2002/10, Annex 4)). These data elements reflect the information contained in the current, paper-based, TIR carnet and provide the basis for the elaboration of a minimal set of data to be computerized. However, this set may need to be further amended in the course of the project, when the Group addresses other issues, such as, for example, security.

#### 1.1.4 Business Opportunity and Problem Statement

This section describes the initial considerations with regard to the development of the eTIR project. A ~~full~~ **complete** vision for the future ~~system will is be defined-presented~~ in Chapter 2.1 of this document.

##### 1.1.4.1 Technological developments in international transport, trade and Customs procedures

The extremely rapid technological developments in Internet applications, world-wide wireless communication systems and smart card technologies have led to simple and cost effective data transmission possibilities on a world-wide level with increasingly secure authentication procedures. These technologies have and increasingly will affect profoundly the way and means how international transport and trade operations as well as Customs procedures are carried out.

EDI technologies are today used by all major freight forwarding companies and by many road transport companies engaged in international transport. Also Customs

authorities increasingly use these technologies to enhance efficiency of internal administrative and control mechanisms and to improve service quality at border crossing points.

The reasons for such rapid introduction of EDI technologies – unthinkable only five years ago – are cost benefits and the superior service quality in terms of accuracy, speed, tracing, controlling, billing and other value-added features which are associated with the use of these computer-based technologies. Traditional paper-based documents and procedures no longer fit into such an environment unless they are accompanied or supported by computer readable data files. Any modern international Customs transit system with the objective of facilitating international transport and trade simply cannot ignore these rapid developments.

#### *1.1.4.2 Efficiency of the TIR Customs transit procedure*

Freight forwarding and transport companies as well as Customs authorities constantly have to improve the efficiency of their operations and to increase service quality. This will become increasingly important since international goods transport, particular road transport, is forecast to increase considerably in the coming years, also along the East-West European transport corridors (European Union – Russian Federation, CIS countries and beyond) and on the Southeast-European axis (European Union – Turkey –Iran (Islamic Republic)/Middle East). These trends, together with the tremendous growth of smaller and time-sensitive shipments, will substantially increase the volume of international shipments and thus the workload of Customs authorities. At the same time the resources allocated to Customs services, both in terms of manpower and installations, are decreasing in many countries.

Statistics show that there exist no alternatives to the TIR Customs transit procedure for international road transport. In 2000 more than 500,000 TIR operations were terminated in the Russian Federation. The CIS countries alone accounted for more than half a million of TIR Carnets issued. Bulgaria, Iran (Islamic Republic of), Romania and Turkey also issued more than 900,000 TIR Carnets to their transport operators in 2000. Even with the extension of the Community and Common Transit Systems to the EU accession countries in the coming years, the use of the TIR procedure will probably further increase, particularly once the countries in the Middle East, Northern Africa and Asia apply fully the TIR procedure and China accedes to the TIR Convention.

Thus, the TIR Customs transit regime will remain the backbone for efficient international road transport at the pan-European level and it seems thus indispensable to adapt it to the already existing and emerging needs of the transport industry and the Customs authorities involved.

In the 1970's, when the paper-based TIR Carnet was introduced in its present form, it not only provided proof of the required guarantee coverage, but it also constituted the administrative basis for further trade facilitation as well as effective Customs administration and control of transit operations. Today the TIR Carnet has lost this role to a large extent (apart from the fact that it is no longer in line with the format and layout of modern trade documents as recommended in the UN Layout key). In fact, there are even situations where the use of the TIR Carnet interferes with the concept of effective Customs transit administration and control, as the information contained in the TIR Carnets is often no longer used directly by Customs authorities, but has to be inserted manually into the various national computer systems which are increasingly used by Customs authorities. In some cases the white and green vouchers in the TIR Carnet are no longer used for Customs control, even though they still have to be filled-in by TIR Carnet holders. Apart from the risk of errors during repetitive data entry (ironically this had been one of the major advantages of the TIR Carnet replacing national Customs documents) these manual

procedures are time-consuming and require resources which Customs authorities should use more effectively for other purposes.

The TIR Carnet also seems to become a burden for TIR Carnet holders as it is difficult, expensive and time-consuming to be filled-in and requires tailor-made software and hardware solutions, while multiple data entries in the TIR Carnet vouchers are often no longer needed for Customs control purposes (see above). Furthermore, the use of TIR Carnets results in millions of physical handling and shipment operations between a centralized printer and the IRU in Switzerland, between national associations and TIR transport operators in more than 40 countries and vice versa, until their final storage at the IRU premises in Switzerland. All these physical movements are a potential source for errors and fraud. They also are reflected in the costs of TIR Carnets, not to mention those incurred by the international EDI Carnet control system.

In terms of Customs efficiency, the paper-based TIR Carnet therefore has already and will increasingly become the weakest link in the TIR transport chain, unless it is complemented and ultimately replaced by electronic procedures. The introduction of new Customs procedures, such as the New Computerized Transit System (NCTS), client-oriented automated Customs declarations systems already available or being installed in virtually all major ports and airports or the electronic Customs procedures applicable for land transport in North America support this view.

Experience shows that automated Customs transit systems do not only reduce processing times at border crossing and final destination, but also allow Customs authorities to offer value-added services to transport operators and freight forwarders, such as on-line information on the status of transit operations. There is no reason why only the road transport industry should not be allowed to benefit from the possibilities of modern technologies in dealing with Customs authorities.

#### *1.1.4.3 The fight against fraudulent activities*

The fight against misuse of Customs transit systems is of utmost importance to all parties, as the facilities of these procedures can only be granted if Customs duties and taxes at risk are not jeopardized or can be easily recovered in case of misuse.

In contrast to its modest origins, Customs transit systems involve today thousands of operations every day. In such an environment, individual and manual processing and control of documentation by Customs officers, as in the past, has become ineffective and is no longer possible without causing long delays. The visual checking of paper-based documents, Customs stamps, ID-numbers, etc. must be complemented and/or replaced by automated systems which can verify authenticity of persons and data (documents) and automatically generate data for risk assessment of sensitive cargoes, destinations, etc. Effective risk management systems with the capability to act in anticipation of emerging problems are not only indispensable at the national level (Customs authorities and national associations), but, as a result of the centralized TIR guarantee system and the increase in international organized crime, also at the international level (international insurers, IRU, TIR Executive Board (TIRExB)). The revised TIR Convention (Phase I) has provided the legal and administrative means to establish such a coordinated approach and modern EDI technologies allow its efficient functioning.

The IRU, acting in accordance with Article 6 of the TIR Convention, maintains data banks with commercial information of their member associations and on the TIR Carnet users as well as information on stolen, misused or otherwise risk-prone TIR Carnets. By means of the SafeTIR system, the IRU also obtains from Customs authorities on-line information on terminated TIR Carnets covering more than 80 per cent of all TIR transports.

The international insurers certainly also have detailed information available on all Customs claims lodged in the framework of the TIR Convention which should comprise information on the reasons for such claims, countries, operators and types of goods involved as well as the amount of duties and taxes thereon.

The TIRExB, as a governmental organ, also has detailed information on all TIR Carnet holders as well as on their status (authorized, excluded or withdrawn). It also has detailed information on approved Customs seals and stamps as well as on the numerous legal arrangements made between national associations and Customs authorities in the Contracting Parties to the Convention.

Some of this information is already today available to Customs authorities or to the private sector, but no concerted efforts have yet been made to share or combine this information neither at the national and international levels nor between these levels. With a view to enhancing pro-active risk management capabilities by Customs authorities, private associations and the international guarantee providers of the TIR system, it seems therefore indispensable that Customs enforcement authorities, the TIRExB as well as the international TIR guarantee providers pool their knowledge and data. In line with national data protection laws, such information could, in the future, be made available on-line and on the basis of well-defined criteria. An integrated information system would not only provide for systematic information about trends in criminal activities, but could also allow automated risk assessment on a case by case basis, thus speeding-up border crossing and termination procedures for the very large majority of transport operators (TRANS/WP.30/2001/5, paras. 15-30).

The Expert Group, when validating the Business Opportunity and Problem Statement at its fourth session on 1-2 March 2004, fully recognized the fact that the statement as reflected in underlying Chapter should be judged and analyzed within the context of its historical setting. In 2001, when identifying the existing problems and formulating the challenges/opportunities ahead in the field of computerization of the TIR Procedure, the Ad Hoc Expert Group on Computerization was not in a position to judge a number of developments which would take place in the course of time, which would put some of the issues raised in a different light. In particular, the Expert Group stressed that major achievements had already been obtained with regard to the implementation of a control system for TIR Carnets, where considerable concerted efforts had been undertaken by Customs authorities and the private sector to exchange and share information.

### 1.1.5 References

~~This item contains the references to documents that relate directly to the scope of the Business Domain, that is the computerization of the TIR procedure. Other references are contained in Annex 7-IX of the Reference Model.~~

#### 1.1.6 Scope of the project

The scope of the project is to allow for the use of electronic data interchange in the so-called “TIR Carnet life cycle” without changing its basic philosophy.

The following elements of the TIR procedure are inside the scope of the project:

- TIR Carnet life cycle:
  - Issuance and distribution of TIR Carnets;
  - TIR Transport;
  - Return and repository of the TIR Carnets;

The following elements of the TIR procedure are outside the scope of the project:

- Approval of the guarantee chain;
- Approval of the association;
- Approval of transport operators;
- Approval of vehicles;
- Management of a control system for TIR Carnets (~~Recommendation of 20 October 1995~~ [Annex 10 of the TIR Convention](#));
- Administration of the TIR Convention;
- Organization and functioning of the guarantee system.

When outlining the contents of the eTIR Project, the WP.30 and the Expert Group have already identified a number of tasks which shall be included. The key statements are reproduced here after:

- Analysis of the actual and future functioning of the TIR procedure ([TRANS/WP.30/2002/5](#); [ExG/COMP/2002/7](#));
- Development of a standard set of messages allowing for an effective communication between parties involved ([ExG/COMP/2002/5](#));
- Preparation of the required amendments to the TIR Convention ([TRANS/WP.30/2002/5](#); [ExG/COMP/2002/7](#));
- Description of roles and responsibilities of all actors involved in an electronic environment ([TRANS/WP.30/2002/7](#));

- Estimation of the costs generated by a computerized environment (cost/benefit analysis) (TRANS/WP.30/2002/5; ExG/COMP/2002/7);
- Inventory of impact on national administrative procedures and national infrastructure (TRANS/WP.30/2002/7);
- Step-by-step approach to achieve tangible results in the computerization of the TIR procedure (TRANS/WP.30/212);
- Establishment of an international centralized database (TRANS/WP.30/212);
- Management by Customs of data on guarantees, once the guarantor has issued a guarantee to an operator (ECE/TRANS/WP.30/226).

### 1.1.7 Constraints

This Chapter describes which issues of a technical, political, economical or other nature have to be taken into account when designing and describing the eTIR Project. Some such issues may limit the possibilities for the project, whereas others may represent dependencies or even create opportunities.

The Requirement List of Annex I specifies how each of these constraints has to be addressed.

#### 1.1.7.1 Technical constraints

- Data protection
- Security
- Compatibility, interoperability or interfacing with the following projects
  - NCTS
  - National Customs systems
  - SafeTIR/Cutewise
  - ITDB
  - ASYCUDA, ASYCUDA <sup>++</sup>, ASYCUDA WORLD
  - UNTDED/ISO7372
  - UNeDocs (project)
  - WCO data sets ~~and data model (project)~~
- A complete migration overnight towards a computerized environment is not realistic (~~paper based systems will have to be interoperable with computerised systems a step by step implementation is required~~).
- Use only future-proof systems and standards
- Character set and coding management

#### 1.1.7.2 Political/legal constraints

- The TIR Convention should be changed as little as possible.
- Certain Contracting Parties may not want to directly exchange information with other Contracting Parties.
- The computerisation should not result in the exclusion of Contracting Parties from the TIR system.

- Data protection laws (e.g. business secrecy, privacy of physical persons law, governmental data protection)
- It may be a legal requirement that the national language of the country of departure is used.

*1.1.7.3 Financial / Economic constraints*

- Limited resources available at the national and international level, both at the private and the public sector.
- Budgeting procedure might take up to 50 months in certain countries. National investments should be planned long in advance.
- Financial support necessity

*1.1.7.4 Other constraints*

- Prioritisation and timing
- IT knowledge in countries (human constraints)

**1.1.8 Stakeholders' needs**

*1.1.8.1 Needs of Customs administrations*

Functional needs of Customs

- Real time information
- Advance cargo information
- International Guarantee management for Customs
- International validation of the authorisation of the TIR Carnet holders against the ITDB (Authorisation, Withdrawal, ...)
- Reports with statistical information
- Status of the TIR transport to be available

Functional needs of guarantors (in the view of Customs)

- Termination notification
- Discharge notification
- Status of the TIR transport to be available

Functional needs of the private sector (in the view of Customs)

- Status of the TIR transport to be available

Additional data needs for Customs

- Consignee
- EU: need of consignor data

*1.1.8.2 Needs of the transport industry*

- Keep the TIR System accessible for new Contracting Parties and small transporters meeting the requirements of Annex 9;

- Ensure the TIR system to be easy to use and competitive in comparison with another means of guaranteeing the delivery of goods to customs office of destination;
- Develop standardized instructions for all the participants of the TIR System with the aim to eliminate disconnected actions and human element causing mistakes while working with the system;
- Facilitate the movement of goods through faster and more standardized Customs procedures;
- Reduce the risk of providing the guarantee by rapidly securing termination and making data timely and available 100%;
- Quickly identify and eliminate from the system those who perpetrate fraud;
- Safeguard data from unauthorized access and occasional damage or loss;
- Increase the level of transparency and confidence between the industry and competent authorities.
- Standard declaration mechanism
- Status of the TIR transport to be available

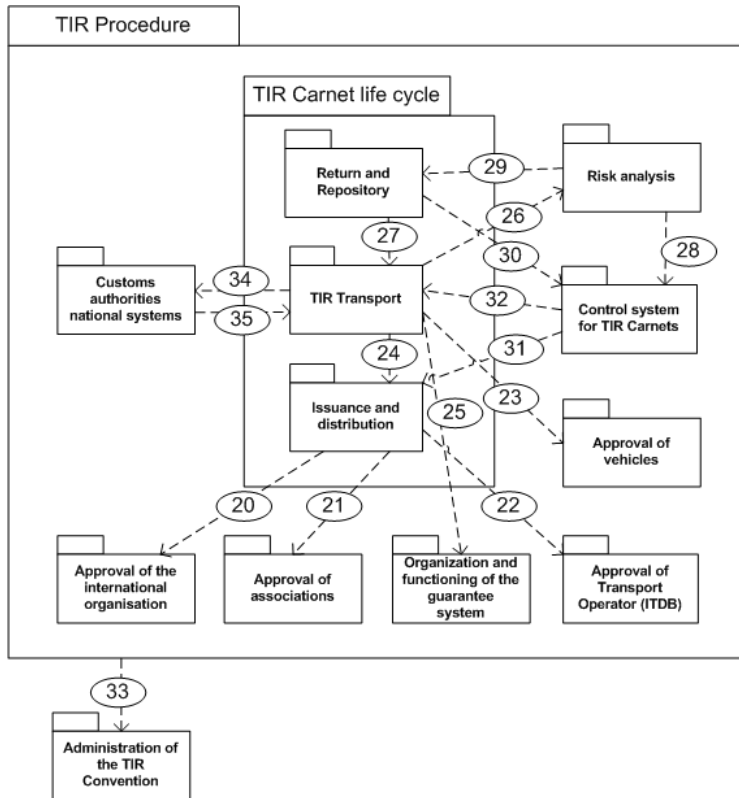

## **1.2 TIR procedure domain**

The TIR procedure is a very wide domain, composed of numerous interconnected systems. As seen under 1.1.5, the current project is limited in its scope to a part of the overall TIR procedure: the TIR Carnet.

### **1.2.1 TIR Procedure package diagram**

The following package diagram is intended to show the division of the domain into systems and the dependencies among those systems.

Figure 1.2  
**TIR procedure package diagram**

**1.2.2 TIR Procedure package diagram description**

Table 1.1  
**TIR procedure package diagram description**

Name	TIR procedure package diagram
Description	<p>The TIR procedure is an International Customs Procedure governed by the TIR Convention, 1975. A detailed description of the procedure can be found in the introduction of the TIR Handbook distributed by the TIR Secretariat.</p> <p>The TIR procedure is composed of numerous interconnecting systems to allow for the functioning of the procedure. The system we are most interested in for the current project is the TIR Carnet system. It can be defined by listing all functions and uses of the TIR Carnet. It is composed of sub-systems, namely: the issuance and distribution system, the TIR transport system and the return and repository.</p> <ul style="list-style-type: none"> <li>The function of the issuance and distribution sub-system by the international organization and the national associations is to provide transport operators with TIR Carnets in order to allow them to perform TIR</li> </ul>

transports;

- The TIR transport sub-system is the central system of the TIR procedure. It links the transport industry to the customs offices involved in a TIR transport and allows them to exchange the necessary information;
- The transport operators, the associations and the international organization manage the return and repository sub-system. Its function is to centralize the storage of the used TIR Carnet and to check that no problems have occurred during the TIR transport;

Other systems outside the scope of the current project but of importance for the well functioning of the TIR procedure are:

- Customs authorities national systems;
- Approval of the guarantee chain;
- Approval of the association;
- Approval of transport operators;
- Approval of vehicles;
- Control system for TIR Carnets;
- Organization and functioning of the guarantee system;
- Risk analysis system;
- Administration of the TIR Convention.

In the package diagram, the dependencies between all systems are indicated with dashed arrows. The dependencies are numbered according to the Requirements 20 to 35 of which they are the consequences.

Actors	Transport industry, Customs, Guarantee chain.
Performance Goals	Facilitate border crossing in international transport of goods.
Preconditions	Ratification of the TIR Convention by Contracting Parties and implementation of the TIR system.
Requirements Covered	20-35

### 1.3 TIR Carnet life cycle use cases

Now that we have described the domain, we can concentrate on the scope of the eTIR Project, the TIR Carnet system.

#### 1.3.1 Actors of the TIR Carnet life cycle

Before describing the use cases of the TIR Carnet life cycle, we will identify all the actors who play a role in the course of the TIR Carnet life cycle. By definition any person, entity or system playing a role in the TIR Carnet life cycle is an actor. The actors have already been identified when setting the boundaries of the project and they are:

- International organization,
- National association,
- Competent authorities (Customs and other),
- TIR Carnet holder,

- Administrative Committee of the TIR Convention (AC.2).

Each actor plays one or more roles in the course of the TIR Carnet life cycle. Therefore, the actors are often considered and defined according to one of the roles they play. For example, the actor “Customs authority” can play the role of Customs office of entry (en route) for incoming TIR transports but it can also play the role of Customs office of exit (en route) for outgoing TIR transports.

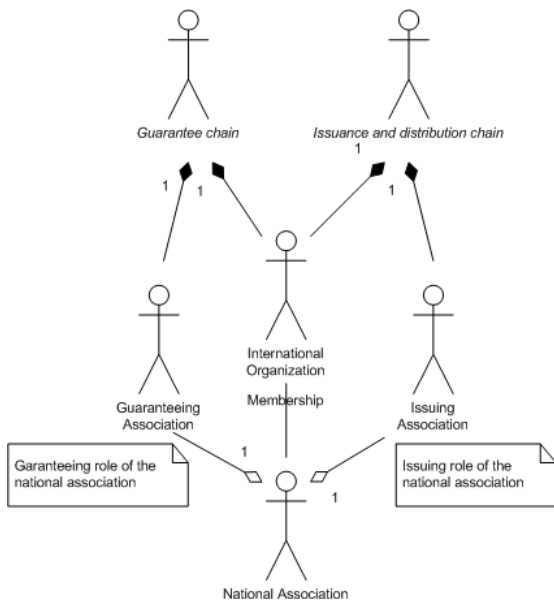

As a consequence, we will identify all aspects of each actor through the roles he performs within the context of the TIR Convention. The following description of the actors by means of the role they play is essential for understanding the rest of the chapter.

1.3.1.1. *International organizations and national associations*

International organizations and national associations can be described according to their two main roles in the TIR Carnet life cycle: the guaranteeing role and the issuing role. Figure 1.5 shows the relation between the international organizations and national associations, taking account of these roles.

Figure 1.35

**International organizations and national associations**

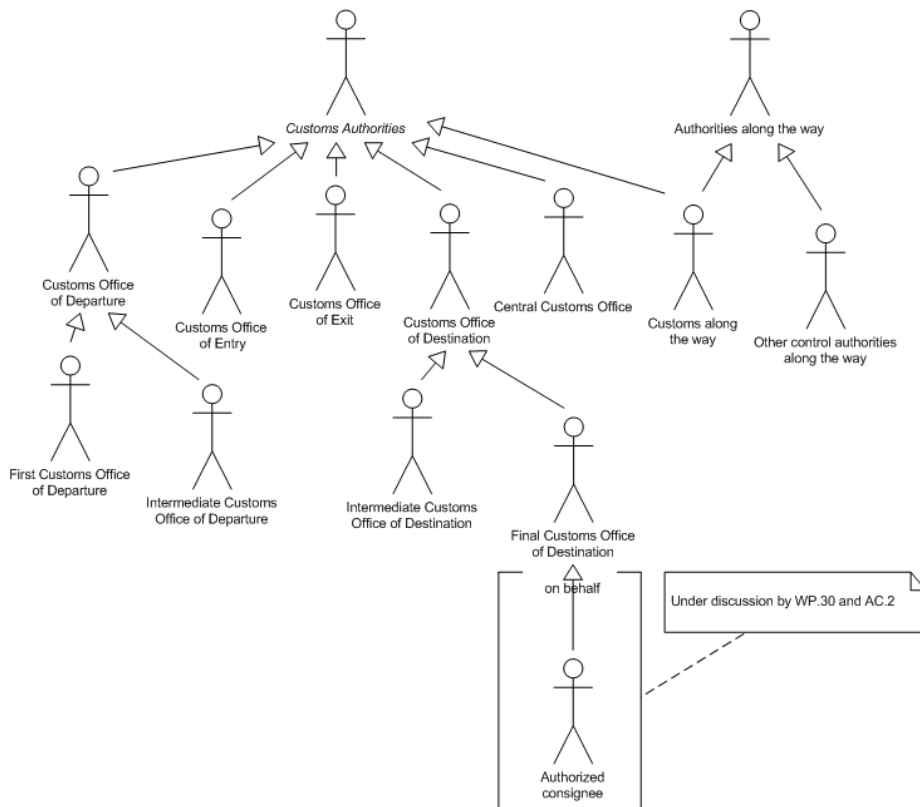

### 1.3.1.2 Competent authorities

The various competent authorities (Customs and other) can be structured in such a way that they reflect the generalization of the roles they have in common. Figure 1.4 reflects the various aspects of the competent authorities (mainly Customs authorities) in the course of the TIR Carnet life cycle.

Figure 1.4

#### Customs authorities and other authorities

1.3.1.3 *TIR Carnet holder*

The TIR Carnet holder fulfils a central role in the TIR Carnet life cycle. This role is reflected in various use cases. Among these, the use case in which he provides data on the TIR transport and certifies them is certainly a crucial one. It can also happen that other persons, on his behalf, fill-in and certify the information that he must provide. Figure 1.6 shows the TIR Carnet holder and the agents who may provide data on his behalf.

Figure 1.65

**TIR Carnet holder and agents**

1.3.1.4 *Administrative Committee of the TIR Convention (AC.2)*

The AC.2 has a supervisory role with regard to the TIR Carnet life cycle. We will see in the detailed analysis of the use cases that some use cases in connection with that role are performed by the TIRExB.

### 1.3.2 TIR Carnet life cycle use case diagram

Figure 1.36

#### TIR Carnet life cycle use case diagram

### 1.3.3 TIR Carnet life cycle use case description

Table 1.2

#### TIR Carnet life cycle use case description

Name	TIR Carnet life cycle use case
Description	High-level view of all activities related to the paper TIR Carnet and the actors involved.
Actors	Guarantee chain, Customs authorities, Holder, Authorities along the way
Performance Goals	Allows the exchange of information between parties involved.
Preconditions	<ul style="list-style-type: none"> <li>• Approval of the guarantee chain;</li> <li>• Approval of the association;</li> <li>• Approval of transport operators;</li> <li>• Approval of vehicles;</li> <li>• Management of the guarantee chain;</li> <li>• Administration of the TIR Convention.</li> </ul>
Postconditions	-
Scenario	An international organization prints (organizes the printing) of TIR Carnets and distributes them to the authorized national associations. An authorized transport operator (TIR Carnet Holder) can then request a TIR Carnet from his national association. The national association issues the TIR Carnet to the TIR Carnet Holder. The national association may in certain cases

return the TIR Carnet to the international organization instead of issuing it to a TIR Carnet holder.

The TIR Carnet is then presented to the Customs office of departure within the limits of its validity by the holder to perform a TIR Transport. The TIR Carnet does not only represent the international Customs document, but also the guarantee.

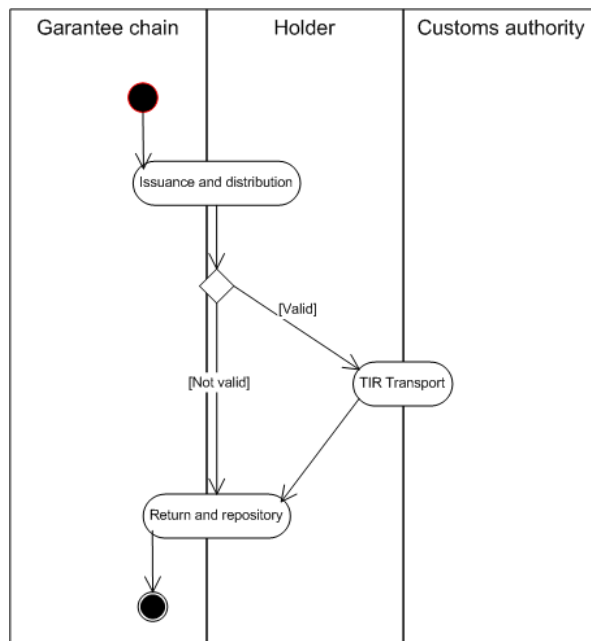

Once the TIR Transport has ended, the TIR Carnet is returned to the holder, then to the association and finally to the international organization. In case the validity of a TIR Carnet has expired before it is presented to the Customs office of departure by the TIR Carnet holder, he must return it unused to the national association, which sends it back to the international organization.

Alternative Scenario	In case of fraud, Customs authorities may keep the TIR Carnet until the case is solved.

Extension Points	-
Requirements Covered	-

**1.3.4 High-level activity diagram of the TIR Carnet life cycle**

Figure 1.47

**TIR Carnet life cycle activity diagram**

## 1.4 Elaboration of use cases

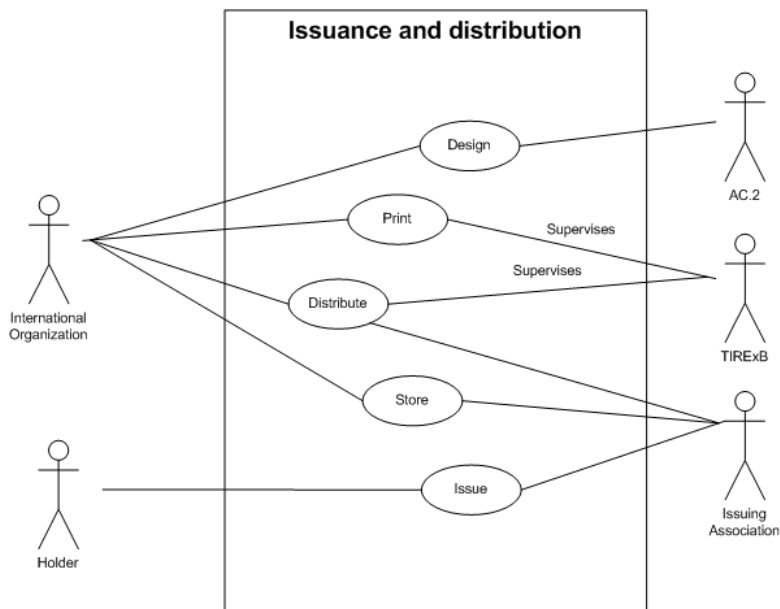

This chapter aims at providing a detailed view of the procedural aspects of the TIR system. It focuses on the most common procedure and does not describe in details occasional procedures. These latter are only identified as alternative scenarios and not dealt with in more details.

### 1.4.1 Issuance and distribution use case

#### 1.4.1.1 Issuance and distribution use case diagram

Figure 1.58

Issuance and distribution use case diagram

1.4.1.2 *Issuance and distribution use case description*

Table 1.3

**Issuance and distribution use case description**

Name	Distribution and issuance use case
Description	In the course of this use case, the TIR Carnet is produced (printed, stored), distributed and issued to authorized transport operators.
Actors	AC.2, international organization, issuing association, holder of TIR Carnet, TIRExB
Performance Goals	To provide authorized TIR Carnet holders with TIR Carnets, the TIR Carnet being a Customs declaration to place goods under the TIR procedure (transit procedure) and representing an internationally recognized financial guarantee to Customs authorities of Contracting Parties with which a TIR operation can be established, in accordance with the provisions of the TIR Convention
Preconditions	<p>The international organization is authorized by AC.2 to centrally print and distribute TIR Carnets in accordance with Art. 6.2bis of the TIR Convention and Annex 8, Article 10 (b) of the TIR Convention under the supervision of the TIR Executive Board</p> <p>The national association is authorized by its national Customs authorities, according to Art. 6.1 of the TIR Convention and Annex 9, Part I of TIR Convention, to issue TIR Carnets and to act as guarantor. The national association should be affiliated to an international organization.</p> <p>Transport operators have to be authorized by competent Customs authorities, according to Art 6.4 and 6.5 of the TIR Convention and Annex 9, Part II of TIR Convention, in order to obtain TIR Carnets from their issuing association and to utilize TIR Carnets, according to Art. 6.3.</p>
Postconditions	<p>In accordance with the TIR Carnet life cycle use case, this use case can be followed by:</p> <ul style="list-style-type: none"> <li>- the TIR transport use case;</li> <li>- the Return and repository use case.</li> </ul>
Scenario	<p>While respecting the design, elaborated under the auspices of the United Nations Economic Commission for Europe and endorsed by AC.2, the international organization is responsible for printing TIR Carnets. The TIR Carnets are stored temporarily before being distributed by the international organization to its affiliated national issuing associations.</p> <p>The issuing association, possibly after another storage period, fills-in fields 1 to 4 of the TIR Carnet cover page and issues the TIR Carnet to authorized TIR Carnet holders, according to Art.6.3 of the TIR Convention (to national or, in some situations, to foreign TIR Carnet holders, respecting, in such case, special requirements) within the quota fixed by the association.</p> <p>The TIRExB supervises the centralized printing and distribution in accordance with Annex 8, Article 10 (b) of the TIR Convention.</p>

---

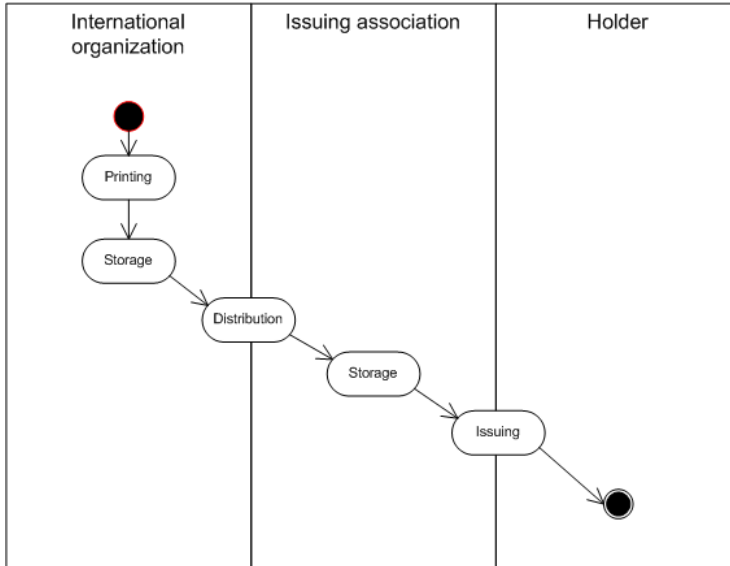

Alternative Scenario	<p>The main scenario does not take into account that the TIR Carnet may be stolen, lost or not valid. The following scenarios are possible:</p> <ol style="list-style-type: none"> <li>1. The TIR Carnet is lost/stolen/not valid after printing but before being stored at the premises of the international organization;</li> <li>2. The TIR Carnet is lost/stolen/not valid while still stored at the premises of the international organization;</li> <li>3. The TIR Carnet is lost/stolen/not valid during transport between the international organization and the national association;</li> <li>4. The TIR Carnet is lost/stolen/not valid, while in possession of the national association, before being issued;</li> <li>5. The TIR Carnet is lost/stolen/not valid after having been issued to the authorized TIR Carnet holder;</li> <li>6. The TIR Carnet is returned by the national association to the international organization before being issued.</li> </ol>
Special requirements	<p>Data on authorized TIR Carnet holders are stored in the International TIR Database (ITDB) maintained by the TIR Executive Board and TIR Secretariat.</p> <p>Data on lost/stolen TIR Carnets is maintained by the international organization in an electronic control system.</p>
Extension Points	<p>During the distribution and issuance, information will be sent to the electronic control system maintained by the international organization.</p>

1.4.2.1 TIR transport use case diagram

Figure 1.710

TIR transport use case diagram

## 1.4.2.2 TIR transport use case description

Table 1.4

**TIR transport use case description**

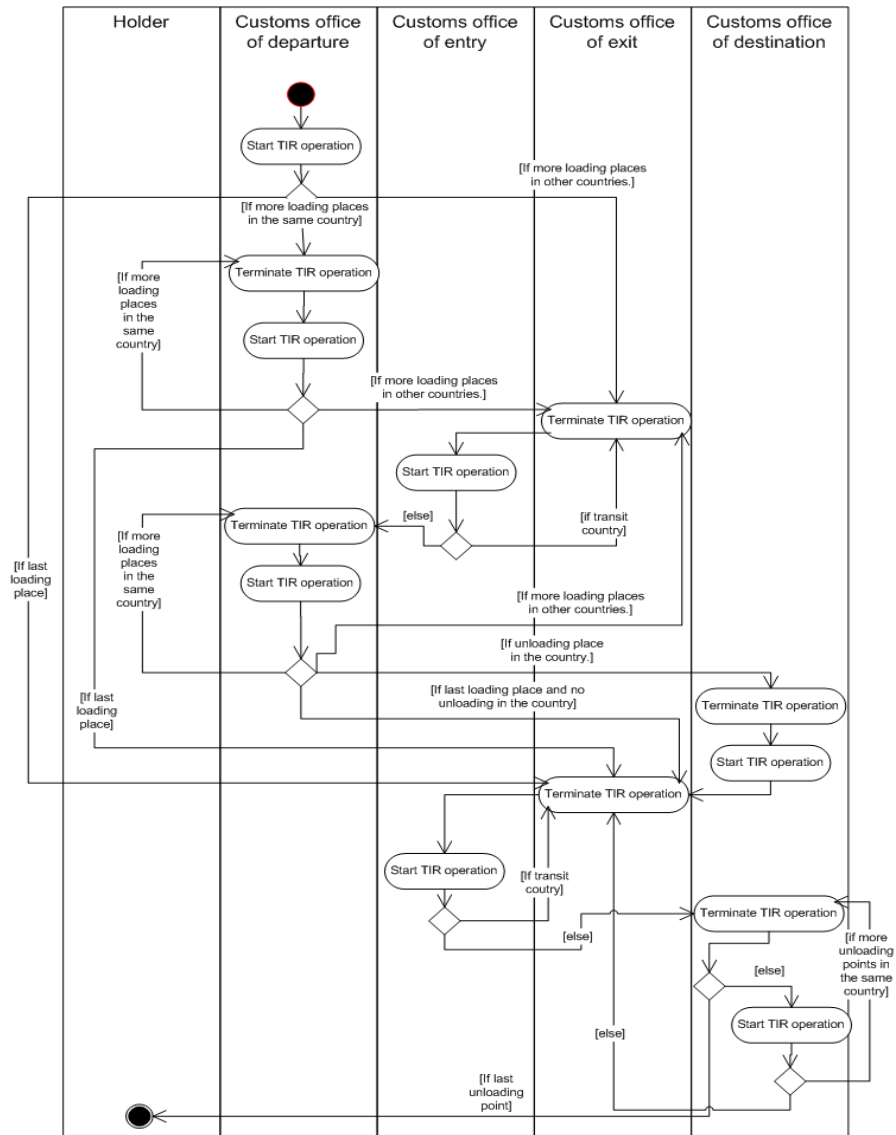

Name	TIR Transport Use Case
Description	This use case describes the transport of goods from the first Customs office of departure to the final Customs office of destination under the TIR procedure, where borders between countries (Customs territories) are crossed.
Actors	Customs authorities, Guarantee chain, TIR Carnet holder
Performance Goals	Reduce the time spent at all concerned Customs offices during international transport of goods performed under cover of a TIR Carnet in accordance with the provisions of the TIR Convention
Preconditions	<p>The authorized TIR Carnet holder must be issued with a valid TIR Carnet to begin the transport. The applicability of the TIR Carnet may depend on the type of the goods to be shipped (e.g. tobacco and alcohol require "Tobacco and Alcohol" TIR Carnets). For the transport of heavy or bulky goods, the TIR Carnet should bear the relevant inscription.</p> <p>The TIR transport has to be performed with an approved vehicle and/or container unless heavy or bulky goods are transported.</p> <p>The TIR transport must be guaranteed by associations approved in accordance with the provisions of Article 6 of the TIR Convention.</p>
Postconditions	<p>In accordance with the TIR Carnet life cycle use case, this use case shall be followed by:</p> <ul style="list-style-type: none"> <li>- The Return and repository use case</li> </ul> <p>After the TIR transport, the goods shall be placed under another Customs regime.</p>
Scenario	<p>Because the TIR transport is a sequence of TIR operations, the scenario of a TIR transport is represented here as a succession of TIR operations, each one being described in two steps. Each step 1-step 2 sequence constitutes a single TIR operation.</p> <p><u>Step 1:</u> Start of the TIR operation at the first Customs office of departure. The Customs officers check the conformity of the TIR Carnet, the goods, the loading compartment, as well as the approval certificates for vehicle and/or container and the commercial and transport documents. Seals are affixed to the loading compartment. The Customs officer fills-in and stamps all the relevant parts of the TIR Carnet pages including counterfoil No. 1. Upon acceptance of the TIR Carnet by the first Customs office of departure, the guarantee is activated (Art. 8, 4).</p> <p><u>Step 2:</u> Termination of the TIR operation at the Customs office of exit <u>en route</u>. The Customs officer stamps counterfoil No. 2, takes out voucher No. 2 and sends it to the Customs office of departure.</p> <p>Steps 1 and 2 are repeated if there are several Customs offices of departure (maximum 3 in one or several countries (Customs territories). In such case, in every consecutive Contracting Party <u>en route</u> transited by the TIR transport, steps 1 and 2 are repeated with the following differences: the Customs office which carries out step 1 is called Customs office of entry <u>en route</u>. It checks the seals, the loading</p>

	<p>compartment and fills-in the relevant fields of vouchers 1 and 2 and counterfoil No. 1.</p> <p>Step 2 is equal to the previous step 2 at the Customs office of exit <u>en route</u>.</p> <p>In the country (Customs territory) of destination, step 1 is identical to the previous step 1 at the Customs office of entry <u>en route</u>. The Customs office which carries out step 2 is called the Customs office of destination. In step 2, Customs officers take off the seals, stamp counterfoil No. 2, take out voucher No. 2 and send it to the Customs office of entry <u>en route</u>. Step 2 encompasses the termination of the TIR operation for this country (Customs territory) as well as the certification of termination for the goods arrived at the Customs office of destination.</p> <p>The validity of the TIR Carnet can be checked by any Customs office of departure, exit <u>en route</u>, entry <u>en route</u> and of destination, using, for example, CUTE-Wise. All Customs offices have the right to remove the seals and to check the goods (see Article 5). In such case, new seals have to be affixed and the appropriate fields of the TIR Carnet have to be filled-in accordingly (box 16, box 3 of counterfoil 1 or box 4 of counterfoil 2).</p>
Alternative Scenario	<p>The main scenario does not take account of the following scenarios:</p> <ol style="list-style-type: none"> <li>1. Falsified acceptance of a TIR Carnet: fraudsters may attempt to falsify the acceptance of a genuine TIR Carnet by using false Customs stamps and seals;</li> <li>2. Incident or accident <u>en route</u>: in such case, the so-called "certified report" should be filled-in by the competent authorities. In case the vehicle can no longer be used, the goods may be reloaded on a different truck and a new TIR Carnet is opened. If the goods are destroyed, competent authorities should state this fact. In this case, the TIR transport cannot be terminated at the intended Customs office(s) of destination but has to be terminated at the nearest Customs office <u>en route</u>. The TIR Carnet may also be amended by competent authorities so that the TIR Transport can continue with the same TIR Carnet;</li> <li>3. Under some conditions, the TIR Transport can be suspended (Art. 26).</li> </ol>

1.4.2.3 Activity diagram of the TIR transport use case

Figure 1.811

TIR transport activity diagram

#### 1.4.2.4 Structured description of activity diagrams of the TIR transport use case

The TIR transport is a sequence of TIR operations that shall start at the first Customs office of departure and terminate at the final Customs office of destination.

The TIR Transport **BEGINS** when the first Customs office of departure starts the first TIR operation.

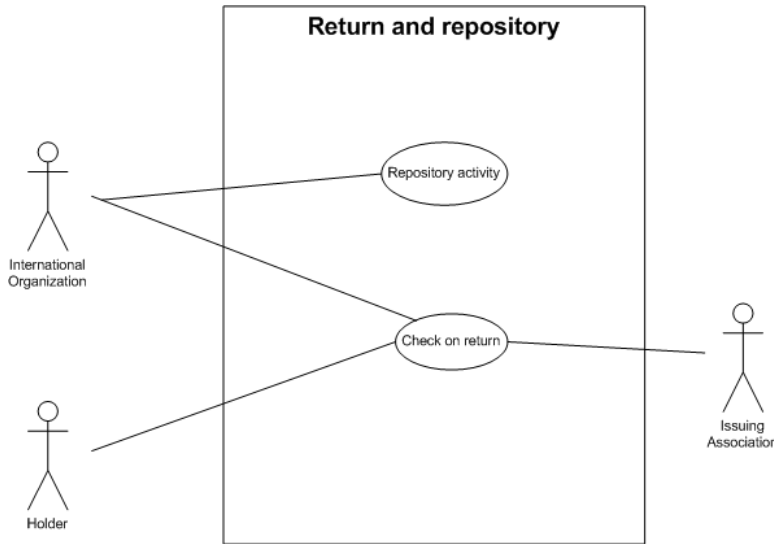

- If other loading point in the same country (Customs territory): **go to 1**;
  - If additional loading will take place in other countries (Customs territories): **go to 2**;
  - If the loading phase is terminated: **go to 3**;
1. At the next loading point, the intermediate Customs office of departure will terminate the current TIR operation (acting as Customs office of destination) before starting a new TIR operation.
    - If there is another loading point in the same country (Customs territory) and if the number of loading points is still inferior to 3: **repeat 1**;
    - If additional loading will take place in other countries (Customs territories) and if the number of loading points is still inferior to 3: **go to 2**.
    - If the loading phase is terminated: **go to 3**.
  2. The Customs office of exit (en route) of the country (Customs territory) will terminate the current TIR operation and the Customs office of entry (en route) of the following country (Customs territory) will start a new TIR operation.
    - If it is a transit country (Customs territory): **repeat 2**.
    - If it is a country (Customs territory) where a loading will take place if the number of loading points is still inferior to 3: **go to 2.1**.
  - 2.1. At the next loading point, the intermediate Customs office of departure will terminate the current TIR operation (acting as Customs office of destination) before starting a new TIR operation.
    - If there is another loading point in the same country (Customs territory) and if the number of loading points is still inferior to 3: **repeat 2.1**;
    - If additional loading will take place in other countries (Customs territories) and if the number of loading points is still inferior to 3: **go to 2**;
    - If the loading phase is terminated and there is no unloading in the current country (Customs territory): **go to 3**;
    - If the loading phase is terminated and there is an unloading point in the current country (Customs territory) and if the number of loading points is still inferior to 3: **go to 2.1.1**.
  - 2.1.1. At the first unloading point, the intermediate Customs office of destination will terminate the current TIR operation before starting a new TIR operation (acting as Customs office of departure).
    - The maximum number of loading and unloading places is limited to 4 and when reaching 2.1.1 the number of loading and unloading is already 3. Thus, only one more unloading point is possible. The goods loaded in one country (Customs territory) cannot be unloaded in the same country (Customs territory). Therefore, the next step has to be the border: **go to 3**.
  3. The Customs office of exit (en route) of the country (Customs territory) will terminate the current TIR operation and the Customs office of entry (en route) of the following country (Customs territory) will start a new TIR operation.
    - If it is a transit country (Customs territory): **repeat 3**.
    - If it is a country (Customs territory) where an unloading will take place if the number of loading + the number of unloading points is still inferior to 4: **go to 3.1**.
  - 3.1. At the unloading point, the Customs office of destination will terminate the current TIR operation.
    - If it is the last unloading point: **END**.
    - If there are other unloading points: **go to 3.1.1**.
  - 3.1.1. At the unloading point, the Intermediate Customs office of destination will start a new TIR operation (acting as Customs office of departure).
    - If there are other unloading points in other countries (Customs territories) and if the number of loading + the number of unloading points is still inferior to 4: **go to 3**.
    - If there are other unloading points in the same country (Customs territory) and if the number of loading + the number of unloading points is still inferior to 4: **go to 3.1**.

**1.4.3 Return and repository use case**

*1.4.3.1 Return and repository use case diagram*

Figure 1.912

**Return and repository use case diagram**

*1.4.3.2 Return and repository use case description*

Table 1.5

**Return and repository use case description**

Name	Return and repository use case
Description	The TIR Carnet is sent back by the TIR Carnet holder to the international organization, via his national association, to centrally store the used or unused TIR Carnets.
Actors	TIR Carnet holder, national association, international organization.
Performance Goals	Store at a central point the evidence of the termination for the duration of the liability of the international guaranteeing chain.
Preconditions	In accordance with the TIR Carnet life cycle use case, this use case can be launched in two cases: <ul style="list-style-type: none"> <li>- The TIR Carnet was issued to a TIR Carnet holder, who used it for a TIR Transport;</li> <li>- The TIR Carnet was issued to but not used by a TIR Carnet holder (usually because the TIR Carnet expired)</li> </ul>
Postconditions	-
Scenario	After having checked the TIR Carnet, the TIR Carnet holder returns it to the national association that issued him the TIR Carnet (within the deadline fixed by the association).

---

	<p>The national association checks whether the TIR Carnet was used properly and whether it was terminated (check of stamps against the electronic control system maintained by the international organization). The national association returns the TIR Carnets to the international organization.</p> <p>The international organization checks the TIR Carnets and archives them. All returned TIR Carnets are physically stored at the international organization for at least the period during which its liability can be invoked according to the TIR Convention.</p>
Alternative Scenario	<p>The main scenario does not take account of the following scenarios:</p> <ol style="list-style-type: none"> <li>1. The TIR Carnet is lost/stolen after the TIR Transport has ended; at the premises of the holder, the national association or the international organization;</li> <li>2. It may happen that the TIR Carnet is kept by Customs authorities and not returned to the TIR Carnet holder. In such case, Customs are encouraged to provide the TIR Carnet holder with the return slip which he should return to the national association.</li> </ol>

#### 1.4.4 Discharge procedure use case

##### 1.4.4.1 Discharge procedure use case diagram

Figure 1.4.4.1

##### Discharge procedure use case diagram

##### 1.4.4.2 Discharge procedure use case description

Table 1.6

##### Discharge procedure use case description

Name	The discharge procedure for a TIR operation
Description	Evaluation of the data or information available at the Customs office of destination or exit ( <u>en route</u> ) and those available at the Customs office of departure or entry ( <u>en route</u> ).
Actors	Customs authorities, Holder, Guarantee Chain
Performance Goals	Determine whether a TIR operation has been terminated correctly, in order to release the holder of his responsibilities and the national association of its guarantee.
Preconditions	This use case is launched after the start of a TIR operation.
Postconditions	-
Scenario	Once the TIR operation has been terminated, the Customs office of destination or exit ( <u>en route</u> ) sends back voucher No. 2 to the Customs office of departure or entry ( <u>en route</u> ) or to a centralized Customs office. Customs authorities compare vouchers No. 1 and No. 2 in order to establish the discharge.
Alternative Scenario	The main scenario does not take account of the following scenarios: <ol style="list-style-type: none"> <li>1. Instead of sending vouchers by post, an exchange of electronic messages between different Customs offices may take place;</li> <li>2. In case the certificate of termination of the TIR operation has been obtained in an improper or fraudulent manner or in case no</li> </ol>

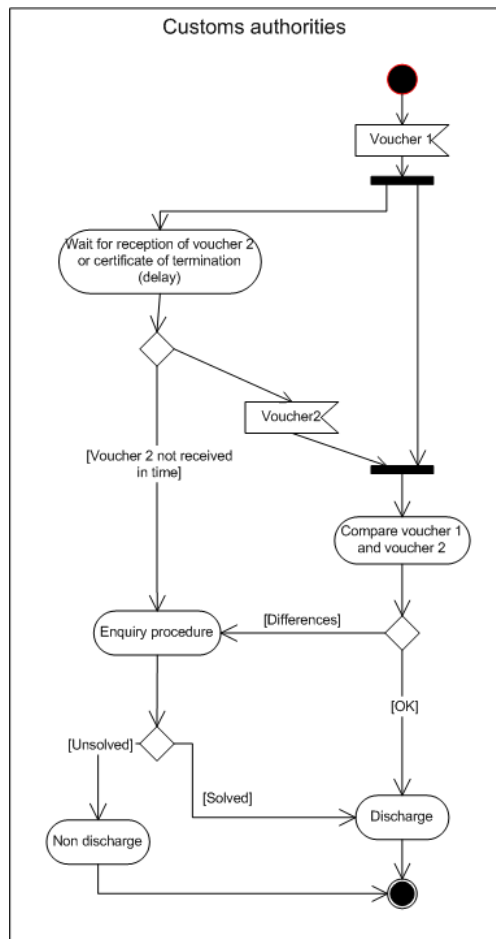

termination has taken place, neither the holder would be released of his responsibilities nor the national association of its guarantee;

- Points -
- Requirements -
- Covered -

1.4.4.3 Activity diagram of the discharge procedure use case

Figure 1.4.15

Discharge procedure activity diagram

#### 1.4.4.4 Structured description of the activity diagram of the discharge use case

---

Two major scenarios can be envisaged depending on the national practice:

a) The discharge procedure is performed by the Customs office that has started the TIR operation; in that case the Customs office that has terminated the TIR operation sends either voucher No. 2 or the certificate of termination to the Customs office having started the TIR operation.

b) The discharge procedure is performed by a central Customs office; in that case both the Customs office that has started the TIR operation and the Customs office that has terminated the TIR operation send respectively voucher No. 1 and voucher No. 2 or the certificate of termination to a central Customs office.

Except from these differences all three scenarios are mainly similar.

1. The discharge procedure **BEGINS** when the Customs office responsible for the discharge receives voucher no. 1 duly filled-in. A deadline for the reception of voucher No. 2 is then fixed.

- If voucher No. 2 arrives before the deadline: **go to 2**

- If voucher No. 2 does not arrive before the deadline: **go to 3**

2. The information between voucher No. 1 and voucher No. 2 (or the certificate of termination) is compared.

- If the comparison leads Customs to the assumption that a Customs infringement has taken place and taxes and duties are due: **go to 3**

- If the comparison does not lead Customs to the conclusion that a Customs infringement has taken place and taxes and duties are due: **go to 4**

3. Inquiry procedures are launched:

- If the inquiry procedure concludes that a Customs infringement has not taken place and taxes and duties are not due: **go to 4**

4. The TIR operation is discharged: **END**

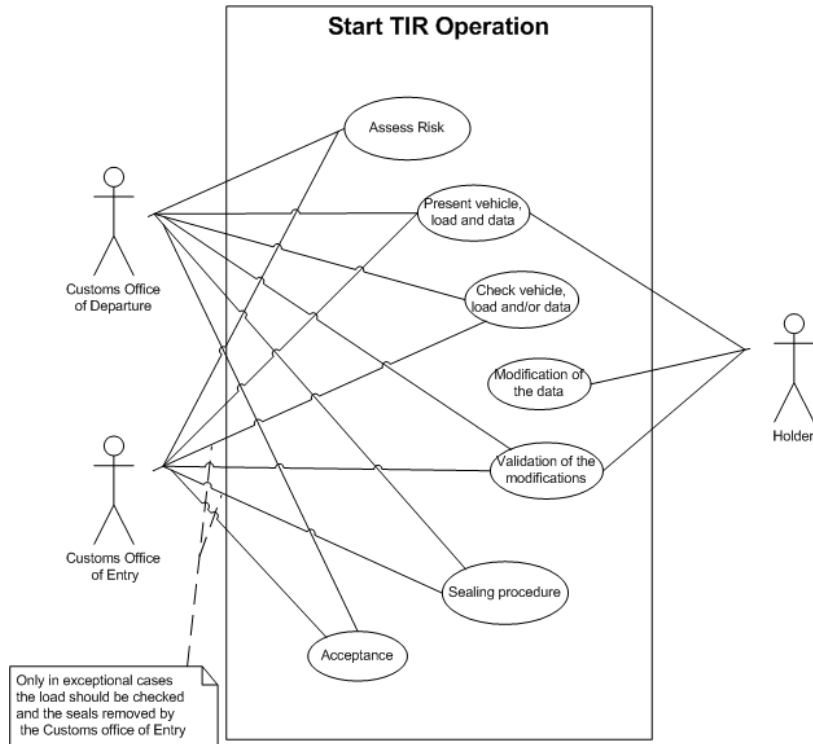

---

### 1.4.5 Start TIR operation use case

#### 1.4.5.1 Start TIR operation use case diagram

Figure 1.4.16

Start TIR operation use case diagram

1.4.5.2 *Start TIR operation use case description*

Table 1.7

**Start TIR operation use case description**

Use Case Name	Start TIR operation use case
Use Case Description	The TIR Carnet is filled-in by the TIR Carnet holder and presented with the vehicle and goods to the Customs office of departure; in continuation, TIR Carnet, vehicle and goods have to be presented at intermediate Customs offices of departure and/or Customs offices of entry ( <u>en route</u> ).
Actors	TIR Carnet holder, Customs authorities.
Performance Goals	Start a transit procedure in a given country (Customs territory) for a specific leg of the TIR Transport.
Preconditions	In accordance with the TIR Transport use case, this use case applies in one of the following situations: <ul style="list-style-type: none"> <li>- At the beginning of the TIR transport: The TIR Carnet holder has provided and validated all information for the TIR transport;</li> <li>- In all other cases: The preceding TIR operation has been terminated.</li> </ul>
Postconditions	In accordance with the TIR Carnet life cycle use case, this use case is followed by: <ul style="list-style-type: none"> <li>- The termination of the TIR operation.</li> </ul> In addition the discharge procedure is launched.
Scenario Customs office of Departure	An authorized TIR Carnet holder presents a valid and duly filled-in TIR Carnet, together with the goods and a TIR approved vehicle at the Customs office of departure. The Customs office of departure checks the data of the TIR Carnet and other accompanying documents with the load. The Customs office of departure seals the load compartment and validates the TIR Carnet by inserting the number and identification of the seals in field 16, and by applying the stamp, signature, date and name of the Customs office of departure in field 17 of all vouchers No. 1 and No. 2 of the TIR Carnet. The Customs officer completes fields 18 and 20 to 23 of the vouchers No. 1 and No. 2 corresponding to the TIR operation, completes counterfoil No. 1, removes voucher No. 1 and returns the TIR Carnet to the holder.
Scenario Customs office of entry	Upon presentation of the TIR Carnet by the holder, the Customs office of entry checks the seals and carries out a routine check of the truck and accompanying documents and may check the validity of the TIR Carnet in Cute-Wise. In exceptional cases, Customs authorities can require examination of road vehicle, combination of vehicles or containers and their load. <p>The Customs officer validates the TIR Carnet by completing fields 18 to 23 of vouchers No. 1 and No. 2 corresponding to the TIR operation, completes counterfoil No. 1, removes voucher No. 1 and returns the TIR Carnet to the holder.</p>
Scenario Intermediate	The holder presents the TIR Carnet, together with the goods, already loaded at a previous Customs office of departure, at the intermediate

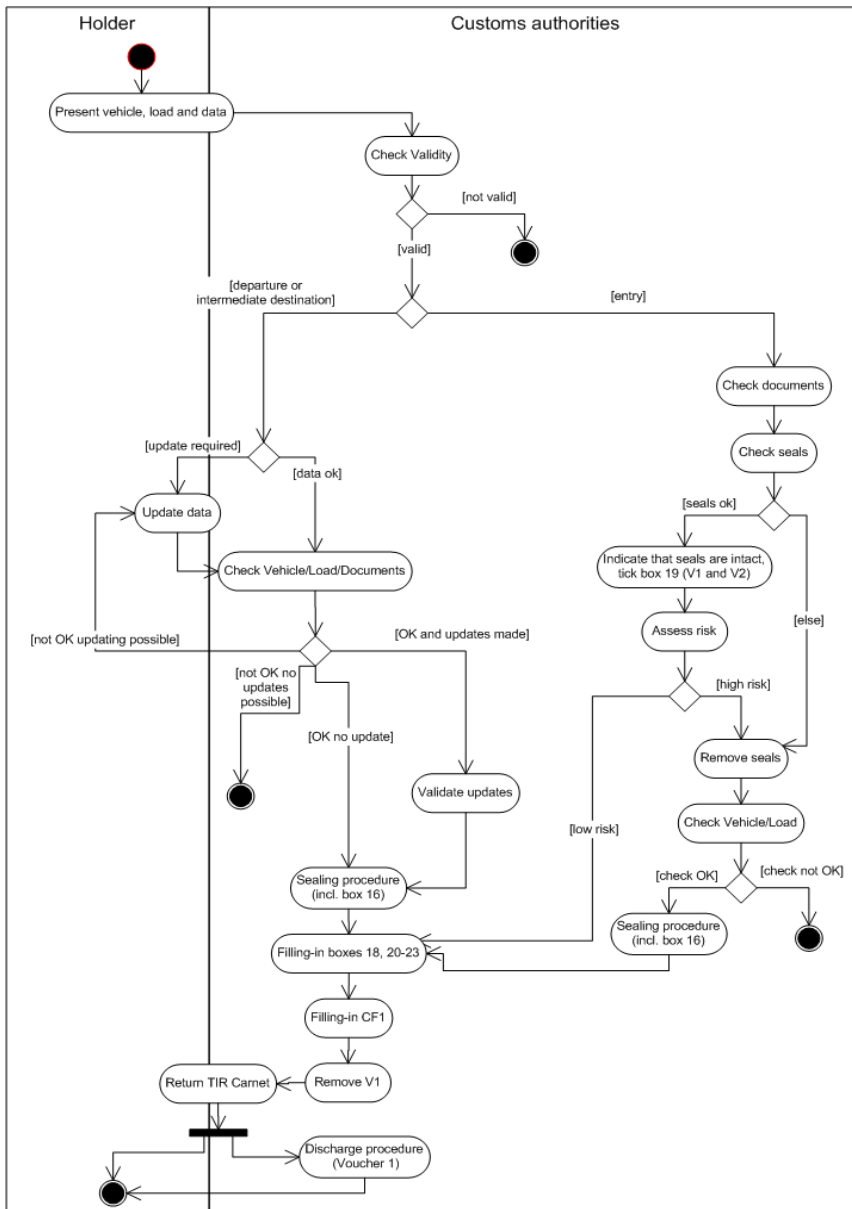

Customs office of departure	Customs office(s) of departure which acts in the same way as the Customs office of departure: the Customs officer checks the data of the TIR Carnet and other accompanying documents with the load. He affixes new seals to the load compartment and validates the TIR Carnet by inscribing the number, identification of the seals in field 16, and by applying the stamp, signature, date and name of the intermediate Customs office of departure in field 17 of all vouchers No. 1 and No. 2 remaining in the TIR Carnet. He completes fields 18 and 20 to 23 of vouchers No. 1 and No. 2 corresponding to the TIR operation, completes counterfoil No. 1, removes voucher No. 1 and returns the TIR Carnet to the holder.
Alternative Scenario	The main scenarios do not take account of the following scenarios: <ul style="list-style-type: none"> <li>a) Non validation of the TIR Carnet by Customs;</li> <li>b) Falsified acceptance of the TIR Carnet;</li> <li>c) Use of lost or stolen TIR Carnets.</li> </ul>
Special requirements	In case of heavy and bulky goods with own identification marks, neither sealing nor a TIR approved vehicle is required. Specific identification marks will be mentioned in the TIR Carnet.
Extension Points	In the process of checking the validity of the TIR Carnet, Customs authorities may make use of information stored in the electronic control system maintained by the international organization.
Requirements Covered	

---

1.4.5.3 Activity diagram of the start TIR operation use case

Figure 1.417

Start TIR operation activity diagram

1.4.5.4 Structured description of the activity diagram of the start TIR operation use case

---

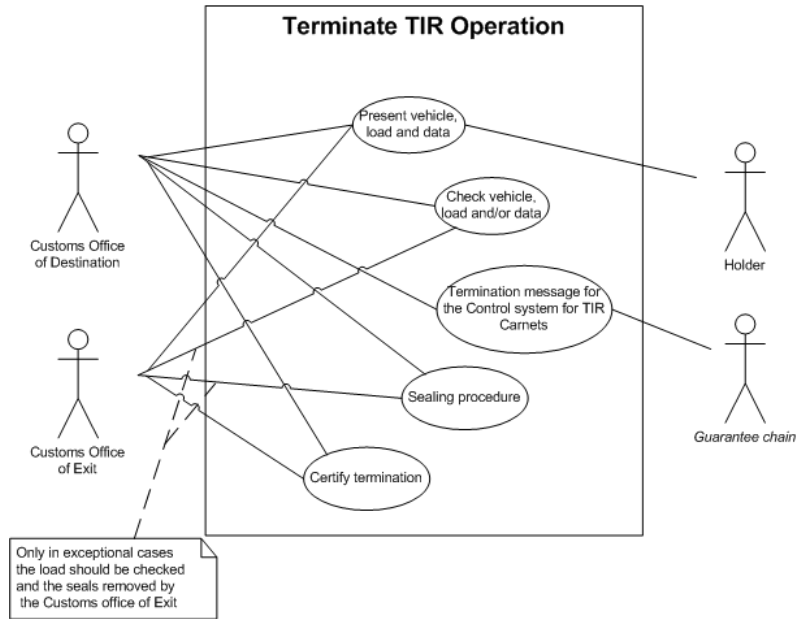

1. The start of a TIR operation **BEGINS** when the TIR Carnet holder presents a valid and duly filled-in TIR Carnet, together with the goods and a TIR approved vehicle at a Customs office. The Customs officer first checks the validity of the TIR Carnet and **ENDS** the procedure if the TIR Carnet is not valid.
    - If the vehicle is at a Customs office of departure or at an intermediate Customs office of destination: **go to 1.1;**
    - If the vehicle at a Customs office of entry: **go to 1.2.**
  - 1.1. If necessary, the TIR Carnet holder is requested to update the information in the TIR Carnet. The Customs office of departure checks the data of the TIR Carnet and other accompanying documents with the load.
    - If any problem is encountered: **go to 1.1.1;**
    - If checks are OK: **go to 1.1.2.**
  - 1.1.1. Update the information on the TIR Carnet.
    - If updating is possible: **go to 1.1.2.**
    - If no updating is possible: **END.**
  - 1.1.2. In case any updating in the TIR Carnet has taken place (goods, itinerary,...) the Customs officer validates those changes by applying the stamp, signature, date and name of Customs office in field 17 of all vouchers No. 1 and No. 2 remaining in the TIR Carnet. **Go to 1.1.3.**
  - 1.1.3. The Customs officer affixes (new) seals to the load compartment. He validates the TIR Carnet by inscribing the number and identification of the seals in field 16 of all vouchers No. 1 and No. 2 remaining in the TIR Carnet, **Go to 2.**
  - 1.2. The Customs officer checks the data of the TIR Carnet and other accompanying documents, as well as the seals and carries out a routine check of the truck.
    - If checks are OK: **go to 1.2.1;**
    - If checks are not OK: **go to 1.2.2**
  - 1.2.1. The Customs officer ticks box 19 on both vouchers 1 and 2 for the current operation and determines whether or not physical checking of the load is required.
    - If NO: **go to 2;**
    - If YES (exceptional cases): **go to 1.2.2.**
  - 1.2.2. The Customs officer removes the seals and checks the load and compares it with the data of the TIR Carnet and other accompanying documents.
    - If everything is OK: **go to 1.1.3;**
    - If any problem is encountered: **END.**
  2. - The Customs officer completes fields 18 and 20 to 23 of both vouchers No. 1 and No. 2 corresponding to the TIR operation,
    - he completes counterfoil No. 1,
    - he removes voucher No. 1,
    - he returns the TIR Carnet to the holder,
    - he keeps or transmits the voucher number 1 for the discharge procedure: **END.**
-

**1.4.6 Terminate TIR operation use case**

*1.4.6.1 Terminate TIR operation use case diagram*

Figure 1.4.6.1

**Terminate TIR operation use case diagram**

1.4.6.2 *Terminate TIR operation use case description*

Table 1.8

**Terminate TIR operation use case description**

Name	Terminate TIR operation use case
Description	The road vehicle, the combination of vehicles or the container with the goods and the TIR Carnet are presented for purposes of control to the Customs office of exit, destination or to the intermediate Customs office of departure (playing the role of a Customs office of exit or destination <sup>7</sup> ).
Actors	TIR Carnet holder, Customs authorities, Guarantee chain.
Performance Goals	Terminate the transit procedure in a given country (Customs territory) for a specific leg of the TIR Transport.
Preconditions	In accordance with the TIR Transport use case, this use case can be launched only after the start of the TIR operation.
Postconditions	A termination message is sent to the control system for TIR Carnets Voucher N°2 or the certificate of termination is sent to the office in charge of the discharge of the TIR operation
Scenario 1	<p><b>Terminate TIR operation at the Customs office of exit en route:</b></p> <p>The holder presents the road vehicle, the goods and the TIR Carnet to the Customs Office of exit (<u>en route</u>) for purposes of control. The Customs officer checks the validity of the TIR Carnet, checks the integrity of the sealing devices, seals and their number against the seals' number mentioned in the TIR Carnet.</p> <p>The Customs officer may also examine all parts of the vehicle in addition to the sealed load compartment (Explanatory Note 0.21-1 to Article 21 of the TIR Convention).</p> <p>The Customs officer may exceptionally carry out an examination of the goods, particularly when an irregularity is suspected (Art. 5 par. 2 of the TIR Convention). In case of examination of the load of a road vehicle, combination of vehicles or the container, the Customs Officer affixes new seals and records on the TIR Carnet vouchers used in that Contracting Party, on the corresponding counterfoils, and on the vouchers remaining in the TIR Carnet, particulars of the new seals affixed and of the controls carried out (Art. 24 of the TIR Convention).</p> <p>If the checks are not satisfactory to the Customs officer, because he notices any irregularity in connection with the TIR operation itself, he may certify the termination of this TIR operation with reservation. In this case, the Customs officer completes field 24 of the appropriate detachable green sheet of voucher No. 2 by inscribing the name of the Customs office of exit (<u>en route</u>), crosses out box 25 (or does not cross out box 25, if the reason for the reservation is that seals or identification marks were indeed not found to be intact), completes field 27 by placing an "R" and fills-in field 28 by putting a stamp, date and a signature. Then the Customs officer completes accordingly the corresponding green counterfoil namely by inscribing the name of the Customs office of exit</p>

<sup>7</sup> The procedure to terminate the TIR operation at an intermediate office of departure is slightly different than at Customs offices of exit or destination.

(en route) in field 1, crossing out box 2 (or does not cross out box 2, if the reason for the reservation is that seals or identification marks were indeed not found to be intact), repeating “R” under item 5 inscribing the reason why the TIR operation is terminated with reservation, and completing field 6 by putting the Customs stamp, date and signature.

If the checks are satisfactory to the Customs officer, he completes field 24 of the appropriate detachable green sheet of voucher No. 2 of the TIR Carnet by inscribing the name of the Customs office of exit (en route), crosses out box 25 and completes field 28 by putting a stamp, date and a signature. Then the Customs officer completes accordingly the corresponding green counterfoil namely by inscribing the name of the Customs office of exit (en route) in field 1, crossing out box 2 and completing field 6 by putting the Customs stamp, date and signature.

After completing voucher and counterfoil number 2 with or without reservation, the Customs officer removes the green voucher number 2 of the TIR Carnet, and returns the TIR Carnet to the holder. The TIR operation is now terminated (Art. 1 lit. d of the TIR Convention). The Customs officer further tears off the detachable green sheet of voucher No. 2 of the TIR Carnet.

#### Scenario 2

##### **Terminate TIR operation at the Customs office of destination:**

The holder presents the road vehicle, the goods and the TIR Carnet to the Customs Office of destination for purposes of control. The Customs officer checks the validity of the TIR Carnet, checks the integrity of the seals and their number against the seals’ number mentioned in the TIR Carnet.

The Customs officer may also examine all parts of a vehicle in addition to the sealed load compartment (Explanatory Note 0.21-1 to Article 21 of the TIR Convention).

The Customs officer takes the seals off and checks the goods.

If the checks are not satisfactory to the Customs Officer because he noticed some irregularities connected with the TIR operation itself, he may certify the termination of this TIR operation with reservation. In this case, the Customs officer completes field 24 of the appropriate detachable green sheet of voucher No. 2 of the TIR Carnet by inscribing the name of the Customs office of destination, crosses out box 25 (or does not cross out box 25, if the reason for the reservation is that seals or identification marks were indeed not found to be intact), inscribes the number of packages for which the termination of the TIR operation is certified in field 26, completes field 27 by placing an “R” and fills-in field 28 by putting a stamp, date and a signature. Then the Customs officer completes accordingly the corresponding green counterfoil namely by inscribing the name of the Customs office of destination in field 1, crossing out box 2 (or does not cross out box 2, if the reason for the reservation is that seals or identification marks were indeed not found to be intact), inscribing the number of packages for which the termination of the TIR operation is certified in field number 3, repeating “R” under item 5 inscribing the reason why the TIR operation is terminated with Reservation, and completing field 6 by putting the Customs stamp, date and signature.

If the checks are satisfactory to the Customs officer, he completes field 24 of the appropriate detachable green sheet of voucher No. 2 of the TIR Carnet by inscribing the name of the Customs office of destination, crosses out box 25, inscribes the number of packages for which the

	<p>termination of the TIR operation is certified in field 26 and completes field 28 by putting a stamp, date and a signature. Then the Customs officer completes accordingly the corresponding green counterfoil namely by inscribing the name of the Customs office of destination in field 1, crossing out box 2, inscribing the number of packages for which the termination of the TIR operation is certified in field number 3, and completing field 6 by putting the Customs stamp, date and signature.</p> <p>After completing voucher and counterfoil No. 2 with or without reservation, the Customs officer removes the green voucher No. 2 of the TIR Carnet and returns the TIR Carnet to the holder. The Customs officer further tears off the detachable green sheet of voucher No. 2 of the TIR Carnet, keeps the upper part of the green voucher number 2 at the Customs office of destination.</p> <p>The TIR operation is now terminated (Art. 1(d) of the TIR Convention). The Customs office of destination sends the SafeTIR message confirming the correct termination of the TIR operation at the Customs office of destination to the competent national guaranteeing association.</p> <p>The Customs officer sends the detachable green sheet to the Customs office of entry (en route).</p>
Scenario 3	<p><b>Intermediate Customs office of destination</b></p> <p>In case a TIR transport consists of various part loads, one or two TIR operations will be terminated at intermediate Customs offices of destination. Such Customs office will play both the role of Customs office of destination (see scenario 2) as well as of Customs office of departure (see also: Use Case 1.4.5.)</p>
Alternative Scenario	<p>The main scenarios do not take account of the following scenarios:</p> <ol style="list-style-type: none"> <li>1. Non validation of the TIR Carnet by Customs;</li> <li>2. Falsified acceptance of the TIR Carnet;</li> <li>3. Use of lost or stolen TIR Carnets</li> </ol>
Special requirements	<p>Goods which have arrived at their Customs office of destination are no longer under the TIR regime. Therefore, they are put under another Customs regime.</p>
Extension Points	<p>In the process of checking the validity of the TIR Carnet, Customs authorities may make use of information stored in the electronic control system maintained by the international organization.</p>
Requirements Covered	<p>-</p>

#### 1.4.6.4 Structured description of the activity diagram of the terminate TIR operation use case

1. The termination of a TIR operation **BEGINS** when the TIR Carnet holder presents a valid and duly filled-in TIR Carnet, together with the goods and a TIR approved vehicle at a Customs office (exit, destination or intermediate office of departure). The Customs officer may first check the validity of the TIR Carnet and **END** the procedure if the TIR Carnet is not valid.

The Customs officer may also examine all parts of the vehicle in addition to the sealed load compartment (Explanatory Note 0.21-1 to Article 21 of the TIR Convention).

- Customs of destination: **go to 1.1**;

- Customs of exit or intermediate departure: **go to 1.2**;

1.1. The Customs officer checks the integrity of all seals and their number against the seals' number(s) mentioned in the TIR Carnet

- If seals are OK: **go to 1.1.1**;

- If seals are not OK: **go to 1.1.2**.

1.1.1. Indicate that seals were intact by ticking box 25 in voucher N°2; **Go to 1.1.2**.

1.1.2. The Customs officer takes the seals off and checks the goods

- If checks are OK at intermediate Customs office of destination: **go to 1.2.2.1**;

- If checks are OK at final Customs office of destination: **go to 3**;

- If checks are not OK: **go to 2**.

1.2. The Customs officer checks the integrity of all seals and their number against the seals' number(s) mentioned in the TIR Carnet

- If seals are OK: **go to 1.2.1**;

- If seals are not OK: **go to 1.2.2**.

1.2.1. The Customs officer indicates that seals are intact by ticking box 25 in voucher N°2; he determines whether or not physical checking of the load is required:

- If YES: **go to 1.2.2**;

- If NO: **go to 3**.

1.2.2. The Customs officer removes the seals and checks the load and vehicle.

- If everything is OK at Customs office if exit: **go to 1.2.2.1**;

- If everything is OK at intermediate Customs office of departure: **go to 3**;

- If a problem is encountered: **go to 2**.

1.2.2.1. The Customs officer affixes new seals and records on the TIR Carnet vouchers used in that Contracting Party, on the corresponding counterfoils, and on the vouchers remaining in the TIR Carnet, particulars of the new seals affixed and of the controls carried out (Art. 24 of the TIR Convention): **go to 3**.

2. The Customs certifies the termination of the TIR operation with reservation. In this case, the Customs officer completes field 27 by placing an "R": **go to 3**.

3. - The Customs officer completes fields 24, 26 and 28 of voucher No. 2 corresponding to the TIR operation;

- he completes counterfoil No. 2;

- he removes voucher No. 2;

- he returns the TIR Carnet to the holder;

- he also should send an electronic message to the control system for TIR Carnets;

- and finally send a termination message to the discharge office (see discharge use case for details): **END**.

## 1.5 Entity classes

Entity classes describe “things” representing characteristics within the TIR procedure, which can take on a certain value or responsibility. Examples of entity classes are persons, places, concepts or situations.

In the TIR procedure, the following classes have been identified:

- International Organization
- Association
  - Issuing Association
  - Guaranteeing Association
- Road Vehicle
- Sealed loading unit
  - Load compartment
  - Container
- TIR transport
- TIR operation
- Goods Manifest Line Item
- Customs office
- Country
- TIR Carnet holder

## 1.6 High-level class diagram

### 1.6.1 High-level class diagram description

The following diagrams are sub parts of the complete high-level class diagram shown in Chapter 1. This subdivision aims at simplifying the explanation by focusing on a specific class at a time, describing its particularities and analyzing its relations with other classes.

In order to fully understand its complexity, the following diagrams reflect the various parts of the high-level class diagram of Figure 1.30, as seen from the perspective of its main classes.

#### 1.6.1.1 International organization

Figure 1.420

#### International organization class and its relationships

Formatted: Font: Not Bold

Formatted: Font: Not Bold

Table 1.9

**International organization sub class diagram description**

Name	International organization sub class diagram
Description	Sub part of the high-level class diagram presenting the international organization class and all relations with other classes.
Central Class	International organization
Example instance of the central class	<ul style="list-style-type: none"> <li>o IRU</li> <li>o ...</li> </ul>
Associated Classes	TIR transport, association
Associations and constraints	<p>The international organization organizes and ensures the proper functioning of the guarantee chain for a TIR transport. A TIR transport can be associated to one and only one international organization. The international organization can represent the guarantee chain for an unlimited number of transports. (Req. 1)</p> <p>The international organization has member associations. The membership is associated to at least one country. An association has to be member of at least one international organization. An international organization can have any number of member associations. A membership can be associated to various countries (e.g. FEBETRA –IRU has a membership valid for Belgium and Luxembourg) and one country can be covered by various memberships. (Req. 2)</p>
Requirements Covered	1 and 2

1.6.1.2 Association

Figure 1.4821

**Association class and its relationships**

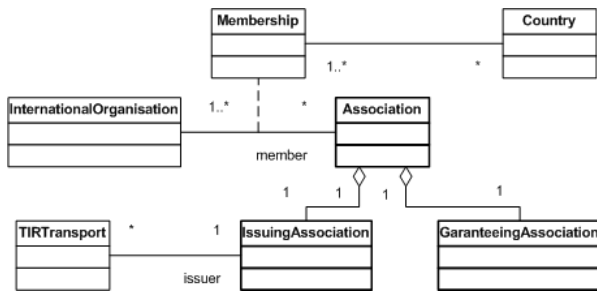

Table 1.10

**Association sub class diagram description**

Central Class	Sealed loading unit
Example instance of the central class	<ul style="list-style-type: none"> <li>o Container n° xxxxxxxxx</li> <li>o Load compartment of road vehicle of brand W, model X, chassis ref. Number Y and Plates ZZZZ approved for transports under customs seals.</li> <li>o ...</li> </ul>
Associated Classes	Goods Manifest Line Item
Associations and constraints	A sealed loading unit is a generalization of a container and a load compartment of a road vehicle. (Req. 8)  A sealed loading unit can contain numerous loads, mentioned in the TIR Carnet as Goods Manifest Line Items. The goods described in the Goods Manifest Line Item are contained in one and only one sealed loading unit. In case of heavy and bulky goods (HBG), the goods described in the Goods Manifest Line Item may not be contained in a sealed loading unit. (Req. 9)

Requirements Covered 8 and 9

Associated Classes	TIR transport, country
Associations and constraints	<p>A TIR transport is performed by one and only one TIR Carnet holder. A TIR Carnet holder can perform any number of TIR transports. (Req. 12)</p> <p>A transport operator is established in one and only one Contracting Party. A Contracting Party can be the residence of numerous transport operators. (Req. 19)</p>
Requirements Covered	12 and 19

1.6.2 High-level class diagram

Figure 1.2730

High-level class diagram

## 2. e-Business requirements

### 2.1 High-level description of the eTIR project

As elaborated in Chapter 1 of the Reference Model, the final objective of the computerization of the TIR procedure encompasses the computerization of the whole TIR Carnet life cycle from distribution, issuance and via the TIR transport to return and repository and it should, ultimately, be aimed at replacing the current paper TIR Carnet without changing the basic philosophy of the TIR Convention. In order to streamline the work towards this challenging objective, the Working Party agreed (and later confirmed) that the approach of the computerization process should be focused on the establishment of an international, centralized database, whose aim it is to allow the management by Customs of data on guarantees and the exchange of information between Customs authorities, being two elements of the TIR Carnet life cycle not computerized so far.

At the request of Contracting Parties, the development of an electronic declaration system is outside the scope of the eTIR project. However, the eTIR project will define standard declaration messages. The technical realization of declaration mechanisms will be left up to initiatives at national or private level. Other elements falling outside the scope of the eTIR project concern the approval of international organizations, national associations, transport operators and vehicles, the organization and functioning of the guarantee system, the management of a control system under Annex 10 and the administration of the TIR Convention.

The first part of this Chapter aims at providing a high level description of the international, centralized database, the eTIR international system, whose aim it is to complement developments and achievements at the national and private level relating to the computerization of the TIR Carnet life cycle. It also provides general guidelines for the smooth transition from the current paper based system to full computerization. The second part of the Chapter describes the functioning of the eTIR international system by means of use cases and activity diagrams.

#### 2.1.1. Actors and roles

This section describes the different tasks and obligations related to the actors and their roles.

##### 2.1.1.1. Customs authorities

Customs authorities can perform the following roles:

- Customs office of departure
- Customs office of destination
- Customs office of entry (en route)
- Customs office of exit (en route)
- Customs office of discharge.

##### 2.1.1.2. eTIR international system

The eTIR international system interfaces with the Guarantee Chain and will ensure the management by Customs of data on guarantees at international level. Moreover, in view of the fact that, within the eTIR system, electronic direct exchange of information between

the Customs administrations located in the different Contracting Parties is neither currently feasible nor enforceable, it will facilitate the secure circulation of standardized information between Customs administrations.<sup>8</sup>

#### 2.1.1.3 *Holder*

The holder performs the TIR transport and is responsible for providing the related declaration data electronically and for presenting the goods to the relevant Custom offices referred to in Chapter 2.1.1.1 above.

#### 2.1.1.4 *Guarantee Chain*

The Guarantee Chain as described in this document is composed of an international organization, authorized by AC.2 to take on responsibility for the effective organization and functioning of an international guarantee system in accordance with the provisions of Article 6.2bis of the Convention and national associations, approved by Contracting Parties in accordance with the provisions of Article 6 and Annex 9, Part II of the Convention to act as guarantors. The Guarantee Chain provides the holder with an international guarantee i.e. a guarantee recognized by each of the Contracting Parties involved in the TIR transport.

### 2.1.2. **Fundamental principles**

#### 2.1.2.1 *eTIR International System brief*

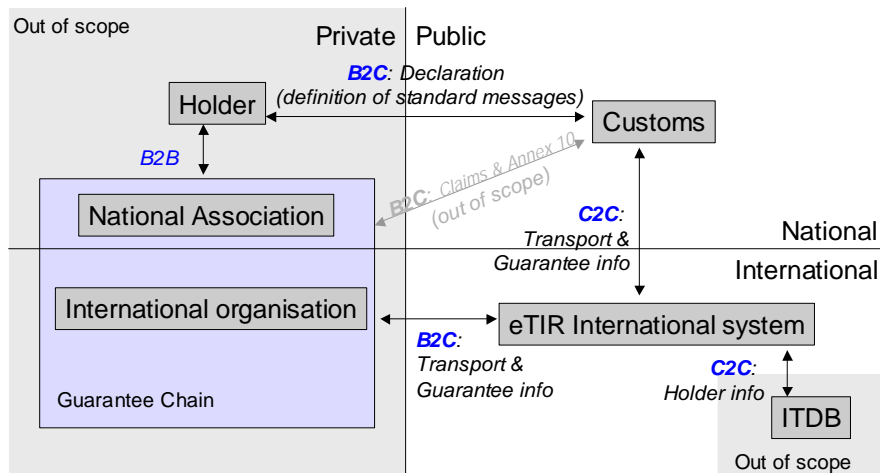

The eTIR international system is devised to allow the management by Customs of data on guarantees by Customs and the secure exchange of data between national Customs systems related to the international transit of goods, vehicles and/or containers according to the provisions of the TIR Convention.

Therefore, only a part of the information flow required for the functioning of the TIR procedure is managed by the eTIR international system. The following picture graphically represents the information exchange between the actors. It also shows that the eTIR international system does not communicate with the holder. It is important to recall that the management of claims and the information to be provided by Customs authorities to authorized associations (under Article 42ter and an international organization (under Article 6.2bis) as provided for by Annex 10 of the TIR Convention are outside the scope of the eTIR project (see figure below).

---

<sup>8</sup> In accordance with the instructions by the WP.30 at its 106th session, the eTIR system administration shall be established on the basis of an international, centralized database whose aim it is to facilitate the secure exchange of data between national Customs systems (TRANS/WP.30/212, para. 26).

**Figure 2.1**  
**The new public private partnership**

On the one hand, the Guarantee Chain transmits to the eTIR international system information on the guarantees it has issued to the holders so that they can be registered in the eTIR international system. The Guarantee Chain can also query at any time the status of guarantees it has issued and obtain related TIR transport information. On the other hand, Customs authorities use the eTIR international system to check the status of guarantees and to exchange information related to the TIR transport and to TIR operations.

The management by Customs of the data on guarantees and the secure exchange of data between national Customs systems in relation to TIR transport information are therefore the two fundamental features of the eTIR international system. Guidelines will also be provided to promote harmonization, especially in the context of the dialogue between the holder and Customs authorities.

Communication, security and fallback solutions constitute other key features of the system.

2.1.2.2. *Management by Customs of data on guarantees*

The management by Customs of data on guarantees requires a strong relationship between the Guarantee Chain and the eTIR international system. The Guarantee Chain sends information on each issued guarantee to the eTIR international system. The recording of this information in the eTIR international system is conditional on checks made against the International TIR database (ITDB) concerning authorized holders.

2.1.2.2.1. *Registration of the guarantee*

After having issued a guarantee to the holder, the Guarantee Chain shall register it in the eTIR international system by sending a standard electronic message.

- a. Elements comprising the registration of the guarantee

Formatted: Don't keep with next

i) *Holder (M)*<sup>9</sup>

Information on the physical or legal person to whom the guarantee has been issued.

ii) *Guarantee Chain (M)*

Information on the Guarantee Chain.

iii) *Guarantee (M)*

Information on the guarantee (guarantee reference number, validity date, ~~maximum number of operations~~ *guarantee type*, ...)

2.1.2.2.2. *Cancellation of a guarantee*

Once a guarantee has been registered in the eTIR international system, the Guarantee Chain may cancel any guarantee which has not yet been used. It may also cancel the validity of a guarantee which is in use but only for the TIR operations which have not yet started. Such cancellation will, however, only become effective at the start of the first consecutive TIR operation.

2.1.2.2.3. *Verification of the guarantee*<sup>\*</sup>

The data on guarantees will be accessible to all Customs offices. If a holder presents to Customs a declaration covered by a guarantee which is not recorded in the eTIR international system or has been cancelled by the Guarantee Chain, then Customs authorities shall not accept it.

<sup>9</sup> M: Mandatory; O: Optional; C: Conditional.

~~\* IRU: "In line with paragraph 2.1.2.2.3 of the draft Reference Model it will be necessary for the Customs office of departure receiving and processing the declaration to verify the validity of the guarantee. As far as the IRU is concerned it will be necessary for the verification to be made to the guarantee chain — either indirectly or via the eTIR international database.~~

~~There are a number of practical, operational and legal reasons why this is necessary, including the following: Although the guarantee data is originally furnished by the guarantee chain, the data stored in the eTIR international database cannot be relied upon as remaining accurate and reliable. The only way to ensure the accuracy and reliability of the guarantee data is to go to the source and to verify the guarantee against the data held by the guarantee chain. In this way, Customs can be assured, with absolute certainty, that the guarantee is valid and that the validity of the guarantee cannot subsequently be denied or questioned.~~

~~The requirement that the guarantee chain is responsible for confirming the validity of the guarantee can, through a loose analogy, be likened to the common situation concerning the use of credit cards. The decision to accept a charge made against a credit card is not made by the establishment requiring the payment or even the bank or institution that issued the card. Rather the decision rests with the credit card company. As this verification to the source is made electronically and instantaneously there is no appreciable delay in processing the request to use the credit card. In the same way the eTIR international system will have a permanent link to the guarantee chain's database — in those cases where verification of the validity is not done directly — and so there will be no delay. The IRU believes that this fundamental requirement would be a sine qua non required by any international organisation authorised under Article 6.2bis of the TIR Convention."(ECE/TRANS/WP.30/2007/15-ECE/TRANS/WP.30/GE.1/2007/10).~~

2.1.2.2.4. *Querying guarantee status*

Once a guarantee has been registered in the eTIR international system, the Guarantee Chain can query at any time the status of guarantees it has issued.

2.1.2.2.5. *Transmission of TIR transport and TIR operation data*

The eTIR international system ~~forwards-notifies~~ the Guarantee Chain of new information on TIR transports and TIR operations related to the guarantees it has issued, other than information which is restricted to Customs.

2.1.2.3. *Exchange of TIR transport and TIR operation information*2.1.2.3.1. *Data handling at the beginning of the TIR transport*

Once the Customs office of departure accepts the declaration, according to national procedures, it will send a message containing that information, together with additional Customs data, to the eTIR international system, in line with agreed requirements. The latter will then store the declaration information and link it with the guarantee information. This information is then ~~available-upon-request,sent~~ to all Customs authorities involved in the TIR transport,offices.

## a. Recording of the elements comprising the TIR transport (and its subsequent updates)

The elements required for the TIR transport recording are those of the TIR operation 'start information' (see point 2.1.2.3.2.a(i)) plus all the elements provided in the declaration(s) (see 2.1.2.4.2.a). ~~In addition, the Customs office of departure provides the following element:~~

~~i) *Seals (C)*~~

~~Information on the seal(s) affixed to the vehicle(s) and/or container(s).~~

~~ii) *Identification marks (C)*~~

~~Identification marks of heavy and bulky goods.~~

~~iii) *References to other information (O)*~~

~~Reference to other information required for heavy and bulky goods, such as packing lists, photographs, drawings, etc.~~

2.1.2.3.2. *Data handling related to TIR operations*

## a. Elements composing the TIR operation registration

i) *TIR operation start information*

The Customs office of departure/entry provides the following information:

- Operation Reference Number and date of start (M)

- Seals (C)

Information on the seal(s) affixed to the vehicle(s) and/or container(s) if seals are affixed, changed or removed.

Formatted: Indent: Left: 2.7 cm, No bullets or numbering

- Results of checks

- Time limit for transit (O)

Time limit for the TIR operation.

- National itinerary (O)

Customs office(s) at which the road vehicle, the combination of vehicles or the container together with the load have to be produced.

- Customs office/~~officer~~ (M)

ii) *TIR operation termination information*

The Customs office of destination/exit provides the following information:

- Date of termination (M)

- Seals (C)

Information on the seal(s) affixed to the vehicle(s) and/or container(s) if seals are affixed, changed or removed.

- Results of checks

- Reservations (M)

In case of doubts with regard to the TIR operation, the Customs office of destination or exit indicates that it has terminated the TIR operation with reservations.

- Customs office/~~officer~~ (M)

iii) *TIR operation discharge information*

The Customs office of discharge is responsible for discharging the TIR operation and providing the following information:

- Date of discharge (M)
- Customs office/~~officer~~ (M)

2.1.2.4. *Other aspects*

2.1.2.4.1. *Issuance of guarantees*

The holder requests a guarantee from the Guarantee Chain, which will, on the basis of international, national and internal rules, decide if the guarantee can be issued to the holder. The Guarantee Chain will then provide the holder with a guarantee reference number for that specific guarantee. This procedure is outside the scope of the development of the eTIR international system but is a prerequisite for its well functioning.

The Guarantee Chain registers the guarantee internationally as foreseen in point 2.1.2.2.1.

2.1.2.4.2. *Declaration/advance cargo information*<sup>10</sup>

The holder submits the ~~declaration~~ advance cargo information by electronic means to the Customs office of departure, making reference to a guarantee issued by a Guarantee Chain, using authentication mechanisms. The declaration shall be submitted prior to the presentation of the goods at the Customs office of departure.

Customs authorities shall, if satisfied, validate and accept the Customs declaration and transmit it to the eTIR International system. The eTIR international system forwards this information to the following Customs authorities involved in the TIR transport.\*\*

\* IRU: "There is no disagreement that the current paper TIR Carnet fulfils two functions: it is the Customs declaration and it is proof of the existence of the internationally recognized guarantee. Moreover, these functions are recognized as two of the five so-called pillars of the TIR system. In other words the intrinsic combination of these two related functions has to be viewed as the cornerstone of the TIR system. In view of the Contracting Parties decision that the computerisation of TIR should "maintain the basic philosophy and structure of the TIR procedure (report of the forty-second session of the AC.2 refers) it is not clear why the IRU has been asked to explain why the dual role of the TIR Carnet should be maintained in the computerized environment.

During the Belgrade meeting the IRU representatives made reference to an "e-Carnet". The Customs representatives appeared to have difficulty understanding what was meant by this concept. It should be made clear that the IRU is not proposing the introduction of an e-Carnet as such – the term was used as a convenient term (and one that had a certain symmetry with the term eTIR) simply to describe the mechanism for providing the appropriate messages relating to the TIR declaration and proof of the TIR guarantee in a computerized environment.

In the context of eTIR, the international guarantee chain would ensure that the Holder had the means to submit his TIR declaration electronically. The declaration would comprise the appropriate messages corresponding to the goods manifest (in the equivalent paper system) and the guarantee data. The guarantee data would comprise information on the following elements: The Holder; the national guaranteeing association; the international organisation involved; the guarantee reference number; and the period of validity of the guarantee. This guarantee data would simultaneously be sent by the guarantee chain to the eTIR international database.

As far as the IRU is concerned this arrangement would enable Customs to manage the guarantee data registered in the eTIR international database whilst also preserving one of the basic philosophical characteristics of the existing TIR system."(ECE/TRANS/WP.30/2007/15-ECE/TRANS/WP.30/GE.1/2007/10).

<sup>10</sup> For a detailed explanation see Annex VI.

\*\* At the Belgrade session, the IRU expressed the view that this description of the system was not in line with the current provisions of the TIR Convention (in particular Articles 1 (o) and 21). In its view, it is a requirement of international Customs law that the holder, as declarant, transmits the declaration to the Customs authorities in each Contracting Party involved in the TIR transport. Moreover, it pointed at legal complication in case divergences would be found between the Customs declaration, as submitted by the holder, and after its transmission to Customs authorities en route. This view was not shared by Customs representatives, who were of the opinion that the current provisions of the TIR Convention do not preclude that the eTIR international system would take care of transmitting the Customs declaration to the following Customs offices of entry en route, which would accept the Customs declaration when the goods would be represented at the border (see: ECE/TRANS/WP.30/2007/9-ECE/TRANS/WP.30/GE.1/2007/6, para. 5).

Formatted: No widow/orphan control,  
Tab stops: 1.8 cm, Right + Not at 1.8  
cm

Formatted: French (Switzerland)

The declaration is dealt with at national level between the holder and the Customs authorities, according to the standards defined by the eTIR project. The following elements shall be provided in the declaration since these elements are also part of the registration of the TIR transport information (see 2.1.2.3.1.a).

a. Elements comprising the declaration

i) *Holder (M)*

Information on the physical or legal person who is responsible for transporting the goods and submitting the declaration.

ii) *Guarantee (M)*

The guarantee reference number under which the TIR transport will be undertaken.

iii) *Goods (M)*

Information on the goods transported (e.g.: type, quantity, identifications, Customs office of departure, Customs office of destination, ...).

iv) ~~Vehicles~~*Mean of Transport/Containers (M)*

Information on the ~~vehicles-mean of transport~~ and/or containers used to transport and /or carry the goods.

v) ~~Accompanying~~*Attached documents (O)*

Reference to all documents, paper or electronic, which are ~~accompanying~~*attached to* the declaration.

vi) *[Consignee (O)*

Information on the physical or legal persons to whom goods are shipped.]

vii) *Intended itinerary (Country level) (M)*

Countries intended to be involved in the TIR transport.

viii) *[Consignor (M)*

Information on the physical or legal persons from whom goods are shipped.]

ix) *[Subcontractors*

Information on the physical or legal person who performs the transport or a part of the transport on behalf of the holder. ] under discussion

2.1.2.4.3. *Pre-arrival information*

One of the objectives of the eTIR international system, as defined by the Contracting Parties, is to provide Customs authorities with information prior to the arrival of cargos. This applies to information provided by the private sector as well as to information exchanged between Customs authorities. Therefore, the eTIR international system ~~makes all information available to all authorized Customs offices concerned. Alternatively, forwards automated messages could be sent from the eTIR international system~~ to Customs authorities all information as soon as information-it is received (push principle).

2.1.2.5. *Data exchange*

2.1.2.5.1. *Central platform*

The eTIR international system is built around a central platform, which is a composed of hardware and software, including databases and web services. The databases serve to store and make the information available and acts as repository for all information concerning the TIR system, whereas the web services allow for an efficient and secure interfacing between the Contracting parties, the Guarantee Chain and the central platform.

2.1.2.5.2. *Communication*

The eTIR international system may use secure Internet connections to exchange messages.

2.1.2.5.3. *Standard messages*

The exchange of data with the eTIR international system is achieved by means of a set of predefined standard messages. All messages needed to ensure the functioning of the eTIR international system are described in Chapter 3.

2.1.2.6. *Security*

2.1.2.6.1. *The elements of security from the TIR Convention*

2.1.2.6.2. *Controlled access (Annex 9, Part II)*

Controlled access remains a major principle of the TIR system. The ITDB will be fully used to ensure that only authorized holders use the TIR system.

2.1.2.6.3. *Security data elements*

Data elements concerning supply chain security are contained in Chapter 3.

2.1.2.6.4. *eTIR international system security*

The eTIR international system is secured with security methods applicable to systems communicating via the Internet. Messages are encrypted and access is restricted to authorize users. The system is available 24/7.

2.1.2.7. *Accompanying document / Certified report*

An accompanying document, printed by the Customs office of departure, provides all information regarding the TIR transport. This document also covers the need in case of accidents and incidents and replaces the certified report.

2.1.2.8. *Fallback solutions*

~~On the one hand, if~~ Customs offices or the Guarantee chain are not in a position to use the standard communication links between their systems and the eTIR international system (web services), the information will be securely ~~transmitted~~ exchanged by means of the eTIR website to the helpdesk (See 2.1.3.2.36.). ~~On the other hand, if the~~ Customs offices electronic system or the communication channels are not functioning, not in a position to access the information related to a specific TIR transport using the web services, they will ~~resort~~ rely onto the accompanying document to ~~insert the required~~ obtain or provide the required information ~~into their system. In order to verify the correctness of the information contained in the accompanying document, they can contact the helpdesk.~~

### **2.1.3. Deliverables**

#### *2.1.3.1. National deliverables*

##### *2.1.3.1.1. National management of data*

The national computer systems of the countries process electronically the data from and to the eTIR international system. The national applications are primarily focused on reception and validation of the electronic declaration as well as on the management of the TIR operations.

##### *2.1.3.1.2. Bridges to the eTIR international system*

National computer systems communicate with the eTIR international system using a predefined set of standard messages and technology.

##### *2.1.3.1.3. User manuals and training*

Customs administrations provide their Customs officers with the necessary documentation and training to ensure the proper use of the national parts of the eTIR international system. They can also provide documentation for holders.

#### *2.1.3.2. International deliverables*

##### *2.1.3.2.1. Central databases*

The central platform is based on a central database system, which stores the data and contains the functional rules that allow the functioning of the eTIR international system.

The databases contain information on the data on guarantees and their coverage, and link the issued guarantees with the holder. Moreover, they contain all data regarding the TIR transports linking them to the guarantee information.

##### *2.1.3.2.2. Web services*

Web services implemented on the central platform allow authorized computer systems to interact securely with the eTIR international system. The web services provide, in a standard format, the functions which allow querying and updating the central database.

##### *2.1.3.2.3. eTIR website*

The eTIR website, made available internationally, is an alternative secure connection to the eTIR international system. It has the same functionalities as the web services.

##### *2.1.3.2.34. Definitions of standard messages*

All messages sent to or received from the eTIR international system are defined and listed in Chapter 3.

2.1.3.2.45. *Technical documentation*

The technical documentation will ensure that the Customs authorities and the Guarantee Chain can develop their specific applications connected to the eTIR international system.

2.1.3.2.56. *User manuals and training for trainers*

The user manuals and the training for trainers serve as basis for the development of national user manuals and national training programs. They describe the procedures, the best practices as well as all tools available in eTIR international system.

2.1.3.2.67. *Helpdesk*

The A helpdesk is available to Customs authorities and the Guarantee Chain to help in the implementation of the eTIR international system ~~as well as ongoing operations (i.e.: the helpdesk will provide fallback to transmit information in case the standard connections (web services) are not available. As a consequence, the helpdesk will need to be available 24/7/365).~~

Formatted: Font: Not Bold, No underline

Formatted: Font: Not Bold

2.1.3.2.78. *Customs offices database*

A database in which information on all Customs offices involved in the eTIR international system is stored.

2.1.3.2.89. *Countries database*

A database containing information on all countries involved in the eTIR system.

2.1.3.2.910. *Authentication database*

In order to technically restrict access to the eTIR international system to those users who have been authorized, a security database is used.

2.1.3.3. *Other required systems*

2.1.3.3.1. *Authorized access database*

To ensure that guarantees are only issued to authorized holders, the eTIR international system links to the ITDB.

2.1.3.4. *Languages and character sets*

The eTIR international system will allow for the translation of all coded information in order to ensure the maximum transparency. In order to allow the transmission and display of all languages, the character set used by the eTIR international system is Unicode.

In case of textual descriptions, the language of the country where the information has been provided shall be used. Nevertheless, translations in other languages can also be provided and are sometimes required.

## 2.2. Step-by step implementation

The eTIR international system as defined in Chapter 2.1 is subdivided in two major modules: management by Customs of data on guarantees and data exchange, which should be developed simultaneously in order to obtain maximum benefits.

The full computerization of the TIR procedure depends on the complete implementation of both modules by all parties involved. Transitional steps will be required before all Contracting Parties of the Convention will exchange electronic information. In view of the wide geographical coverage of the TIR Convention and the different levels of technological development of the countries concerned, the duration of the transition may vary from country to country.

#### **2.2.1. Management by Customs of data on guarantees module**

The management by Customs of data on guarantees module, as described in Chapter 2.1.2.2, allows the Guarantee Chain to electronically register in the eTIR international system all guarantees issued to the holders. Moreover, it enables Customs authorities to check the validity of the guarantee in the course of a TIR transport and before each TIR operation.

Introducing the management by Customs of data on guarantees into the eTIR international system will increase the security of the TIR system by making available, at any time, information on the validity of the guarantees. Moreover, by linking the consultation of the status of the guarantee to the ITDB, it will further secure the system by ensuring that unauthorized holders will not be allowed to perform TIR transports. Logically, it will also further discourage attempts to falsify the TIR Carnet.

The corner stone of the management by Customs of data on guarantees module is the registration of the guarantee by the Guarantee Chain. It implies the development of the eTIR international system with all related functionalities and the development or the amendment of a tool allowing for real-time transmission by the Guarantee Chain of guarantee data to the eTIR international system

#### **2.2.2. Data exchange module**

The second module of the eTIR project focuses on developing the TIR transport and TIR operations information exchange combining them with the guarantee information provided by the Guarantee Chain.

In view of the fact that not all Customs offices will immediately have access to the eTIR international system, the use of present paper TIR Carnet will be maintained and remains mandatory. Nevertheless, all eTIR compatible Customs offices will already be in a position to have access to and update the central system with TIR transport/TIR operation information.

It can be envisaged that one or more pilot projects concerning the exchange of data between Contracting Parties can be initiated, in line with the mandate provided by WP.30 (TRANS/WP.30/212, para. 21).

#### **2.2.3. Abolition of the present TIR Carnet: a geographical expansion**

Before being able to completely abandon the present paper TIR Carnet, all parties involved in a TIR transport will have to be able to securely exchange electronic information on the TIR transport, the TIR operations and on the guarantee. To enable a smooth transition towards a fully computerized TIR system, the use of the present paper TIR Carnet will be discontinued for itineraries where all Customs offices will be linked to the eTIR international system.

As a result, for those TIR transports where the TIR Carnet will no longer be required, the full implementation of the second phase of the eTIR project will become mandatory for all Customs offices involved. Issues with regard to rerouting are addressed in the analysis and design chapters.

**2.2.4. Parallel projects**

**2.2.4.1. Declaration mechanisms**

In parallel to the implementation of the eTIR international system, standard eTIR national electronic declaration mechanisms will also have to be developed, aided by guidelines established in the analysis chapter. In this context, it can also be envisaged that standard declaration mechanisms are facilitated by developments from Customs administrations or from the private sector, nationally or internationally.

**2.2.5. Schedule**

The eTIR sub-projects imply developments at public and private level. Moreover, the public developments will be of both an international and national nature.<sup>11</sup>

The following schedule does not provide any timeframe; it only aims at showing the dependencies between the various projects in their different phases of development. The national implementations of the projects by Contracting Parties will certainly not be achieved simultaneously. Therefore, the schedule below considers three different timeframes, covering the possibilities for countries to develop their projects at their own speed.

**Table 2.1  
Step-by-step implantation schedule**

<i>Sub-projects</i>	<i>Steps<sup>12</sup></i>			
<i>eTIR project</i>				
Public international	<b>I</b>	<b>E</b>	<b>C</b>	<b>T</b>
Public national				
Contracting Party 1	<i>E</i>	<i>C</i>	<i>T</i>	
Contracting Party 2		<i>E</i>	<i>C</i>	<b>T</b>
Contracting Party 3			<i>E</i>	<i>C</i>
Private <sup>13,14</sup>	<i>E</i>	<i>C</i>	<i>T</i>	
<i>Parallel projects</i>				
National declaration mechanism				
Contracting Party 1	<i>E</i>	<i>C</i>	<i>T</i>	
Contracting Party 2		<i>E</i>	<i>C</i>	<b>T</b>
Contracting Party 3			<i>E</i>	<i>C</i>
Private <sup>15</sup>	<i>E</i>	<i>C</i>	<i>T</i>	
<i>Paper to electronic step-by-step transition</i>				
	1	2	3	4

<sup>11</sup> The same might apply to the private sector development but it is not the aim of this project to provide the private sector with instructions on how their systems will have to be developed or updated in order to meet the requirements of the eTIR project.  
<sup>12</sup> The letters in the cells represent the different phases as identified in table 0.1 of the Reference Model (I: Inception, E: Elaboration, C: Construction, T: Transition). Steps in italics are performed at national level or at private sector level. Steps in bold need to be finalized before reaching the milestone (indicated by vertical lines).  
<sup>13</sup> The well functioning of the private/public partnership is essential to successfully implement this project.  
<sup>14</sup> The IRU emphasised that this part of the computerization has already been largely accomplished.  
<sup>15</sup> It is envisaged that the private sector will provide declaration mechanisms, in particular to authorize holders submitting declarations in a country other than their country of registration.

#### 2.2.5.1. Paper to electronic step-by-step transition

The transition from the paper TIR Carnet to the eTIR system will be achieved progressively, with the completion and implementation of the projects at the national and international level. In the schedule above, four major steps are identified:

1: Before the eTIR international system will be in place, allowing the exchange of information between the Guarantee Chain and the eTIR international system as well as allowing countries to exchange data, the paper TIR Carnet and the actual private or public systems will remain the only possible tool for the management of the TIR procedure.

2: Once the eTIR international system is available and the Guarantee Chain interoperates with the system in order to provide the guarantee information, countries will start linking up to the eTIR international system, in order to obtain validation of the guarantees submitted by the holders.

3: When all Contracting Parties along a specific itinerary will have been computerized (the guarantee and data exchange modules as well as the declaration mechanisms), there will be no more need to use the present paper TIR Carnet for TIR transports along this itinerary. During this step, some TIR transports will continue to use paper TIR Carnets whereas others will be performed under cover of eTIR.

4: When all Contracting Parties of the TIR Convention will have implemented both modules as well as the appropriate declaration mechanisms, the present TIR Carnet will be completely abandoned.

### 2.3. Use cases analysis

The elaboration of the use case analysis is based on the instruction by the WP.30 that the eTIR project should evolve around the establishment of an international centralized database in order to facilitate the secure exchange of data between national Customs systems and that the management of the data on guarantees, once the Guarantee Chain had issued a guarantee to an holder, should lie with Customs (ECE/TRANS/WP.30/226, para. 41).

#### 2.3.1. Management by Customs of data on guarantees use case

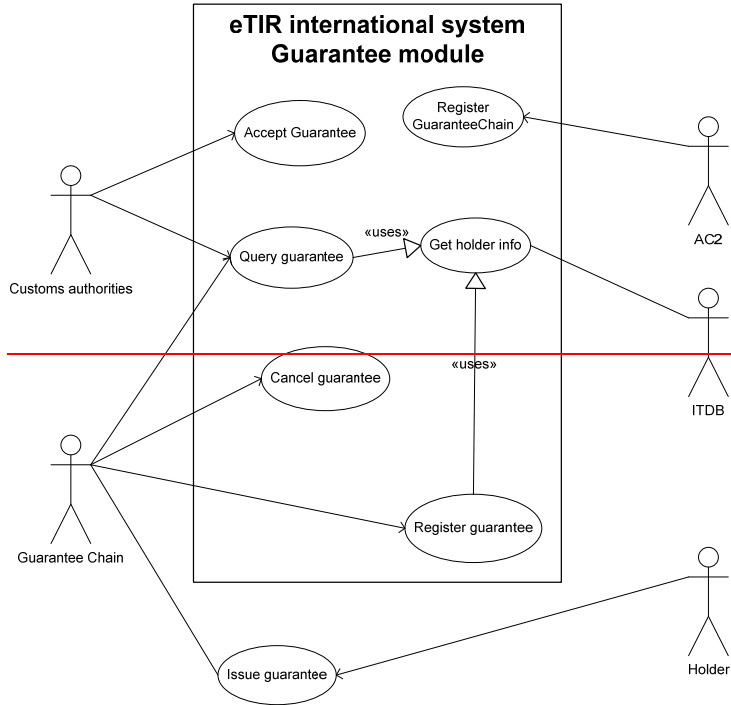

The management by Customs of data on guarantees requires that the Guarantee Chain updates the guarantees directly in the eTIR international system right after having issued them to holders.

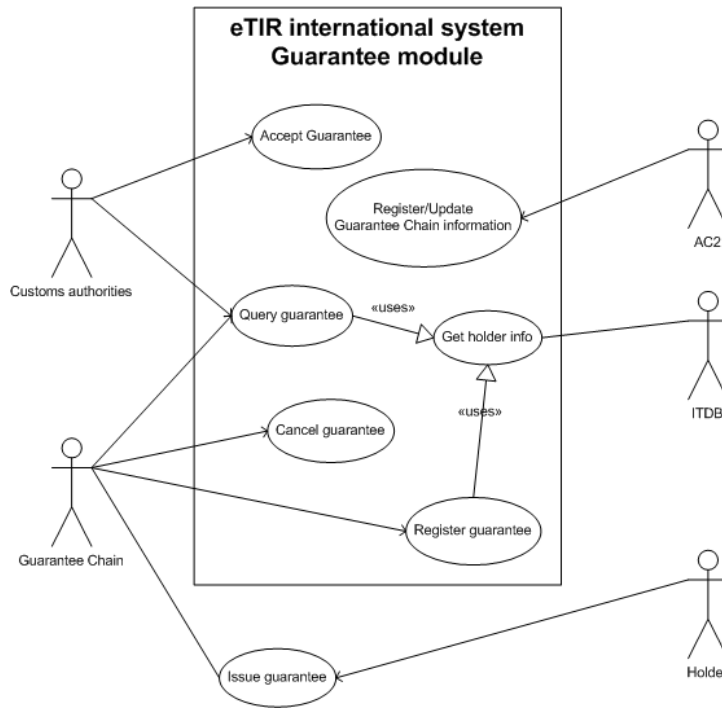

##### 2.3.1.1. Management by Customs of data on guarantees use case diagram

Figure 2.2

**Customs management of guarantees use case diagram**

### 2.3.1.2. Guarantee state chart diagram

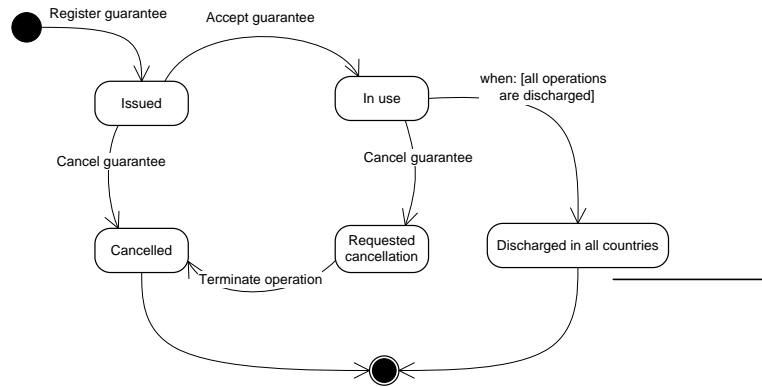

The guarantees registered in the eTIR international system will have their status updated all along the TIR transport. The following state chart diagram shows the various statuses as well as the transition even between them.

The guarantee status can be:

- Issued
- In use
- Proposed cancellation
- Cancelled
- Discharged in all countries

**Get holder info activity diagram**

2.3.1.13. Query guarantee use case description

Table 2.7

**Query guarantee use case description**

Name	Query guarantee use case
Description	Customs authorities or a Guarantee Chain request the eTIR international system information on issued guarantees.
Actors	Guarantee Chain, Customs authorities
Performance Goals	-
Preconditions	-
Postconditions	-
Scenario	<p><b>Query the guarantee</b></p> <p>A Guarantee Chain or Customs authorities send a secure electronic query to the eTIR international system. The eTIR international system extracts all data from the database concerning the guarantee and combines them with data on the holder (get holder info) and sends all information to Customs authorities or to the Guarantee Chain. If the guarantee has not yet been registered, the Customs authorities or the Guarantee Chain are informed accordingly.</p>
Alternative Scenario	<p><b>Fallback scenario</b></p> <p><del>Since</del> Customs authorities and the Guarantee Chain <u>can use the eTIR website</u> are automatically notified of all updates regarding guarantees; <del>no fallback procedure is foreseen in case the eTIR international system</del></p>

is temporarily down. They will have to try again at a later stage.

- Special requirements A Guarantee Chain can only query information on those guarantees which he has issued and which have been registered by the eTIR international system. The eTIR international system also provides him with information on TIR transports attached to the guarantees issued by him.

### 2.4. Class diagram

The class diagram in Figure 2.17 is articulated around 3 main classes (in grey): the guarantee, the consignment and the TIR operation.

- The guarantee class, because the majority of information exchanged with the eTIR international system will be referenced by means of the GRN.
- The consignment class, because it links all information regarding the goods in transit.
- The TIR operation class, because it allows the exchange of information previously contained in the counterfoils.

Figure 2.18

Formatted: \_ H \_Ch\_G

### 3. Analysis workflow

To be filled in at a later stage: The purpose of the analysis chapter is to translate the requirements identified in Chapter 2 (eBusiness requirements) into specifications that enable software developers and message designers to further design the eTIR system.

8. Analysis goals are:

(a) To build a set of business objects from the requirements contained in Chapter 2:

(b) To transform the requirements set out in Chapter 2 into precise, object oriented specifications;

(c) To provide a foundation for the design of electronic messages;

(d) To provide all actors of the eTIR system with interfaces to hook on to their existing information systems;

(e) To explicitly specify the dynamics of the eTIR system.

9. In order to achieve those goals, Chapter 3 provides further detail on the dynamic aspects of the eTIR system and completes the more general description provided by the activity diagrams in Chapter 2. It does so by means of sequence diagrams which describe the detailed interactions between actors and objects in the eTIR system. The identification of all these interactions is the basis for the elaboration of the electronic messages.

10. Furthermore, the class diagram in Chapter 2 is further developed and is now divided into three separate class diagrams, which include attributes and operations. The class diagrams will be used to design the messages and provide the structure of databases. They will also provide the basis for the development of the objects' methods.

The analysis chapter is therefore subdivided into two parts, starting with the activity analysis, which depicts the dynamics of the eTIR international system, and followed by a data analysis, which presents the attributes and the methods of the objects used and exchanged by the eTIR international system in the form of class diagrams.

#### **3.1. Activity Analysis**

##### **3.1.1. Sequence diagrams**

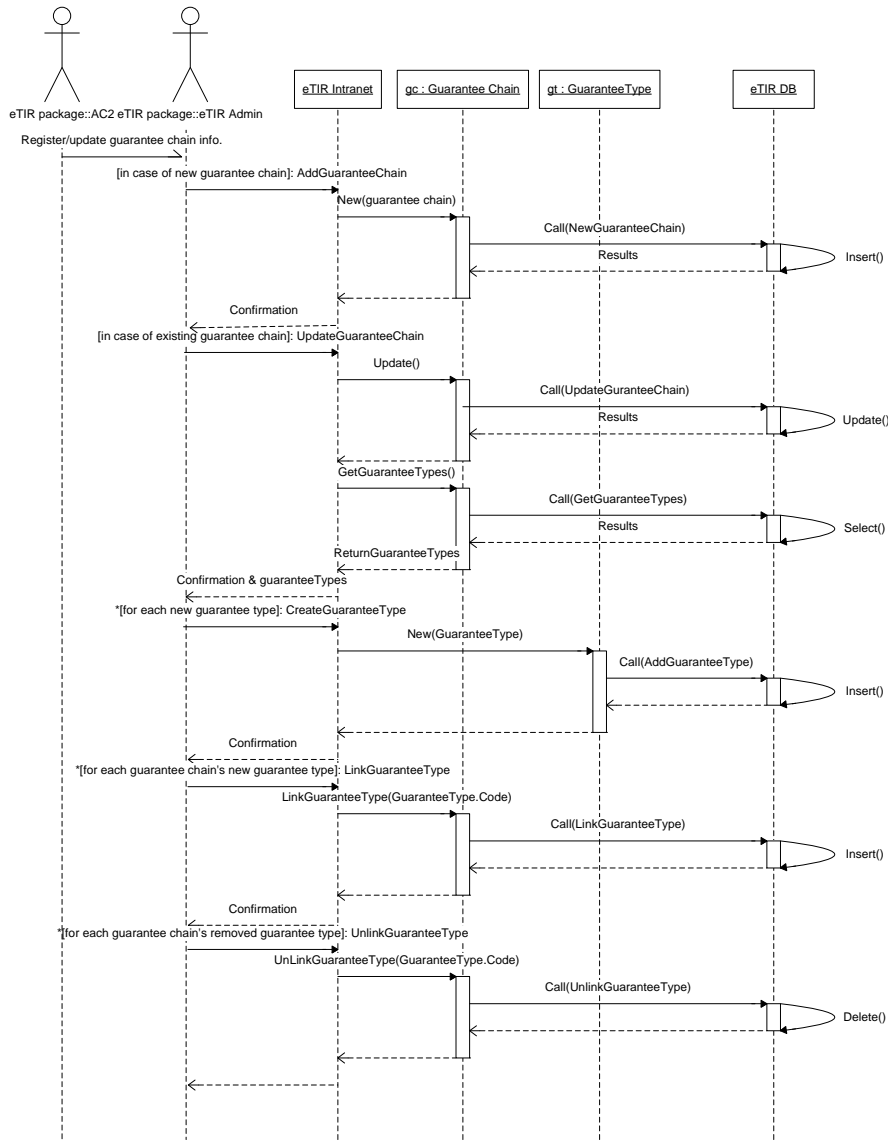

The following sequence diagrams are devised on the basis of the activity diagrams presented in Chapter 2.3. They describe in details all interactions between the actors and the objects of the system.

3.1.1.1. Management by Customs of data on guarantees

**Figure 3.13:  
Notify subsequent countries sequence diagram**

Formatted: Indent: Left: 2 cm

**3.1.2 Fall-back scenarios**

The aim of this chapter is to provide specific fallbacks for every use case involving the eTIR international system. The fall-back scenarios are based on three major elements:

- Accompanying document;
- Local information;
- eTIR website, including a replica of the eTIR international database.

The accompanying document is a piece of paper provided by the Customs office of departure after the declaration has been accepted. It contains all relevant information regarding the TIR transport.

It is important to note that the underlying fall-backs are of a functional nature. The systems at stake (i.e. the eTIR international system, national systems and guarantee chain systems) should also be equipped with technical fall-backs which allow systems to run smoothly in case of failure. Functional fall-backs have to be used only when all technical fall-backs have failed.

The use of functional fall-backs may not provide the same level of facilitation to both the holder and Customs. As a consequence, their use should not be mandatory for the holder, who should always have the possibility to wait for the systems to be restored. Similarly, Customs may establish delays before starting functional fall-backs, allowing for the technical fall-back to be started or for the systems to be repaired.

### 3.1.2.1 Management by Customs of data on guarantees

Guarantee related information is crucial for the well-functioning of the eTIR system. Therefore, particular emphasis is put on the analysis of use cases where the eTIR international system is not in a position to provide the required exchange of guarantee information. The eTIR website will ensure that guarantee information can be accessed by Customs administrations in case the eTIR international system, the guarantee chain system or Customs systems are not available.

#### 3.1.2.1.1 Register guarantee

Potential problems:

1. The guarantee chain system is not functioning.
2. The connection between the guarantee chain system and the eTIR international system is broken.
3. The eTIR international system is not functioning.

Fall-backs:

1. The guarantee chain transmits the information to the eTIR international system through the eTIR website. The guarantee chain will update its system as soon as it is again functioning, keeping in mind that the guarantees have already been entered in the eTIR international system. The eTIR international system will inform the guarantee chain accordingly in case it would try to register a guarantee already registered via the eTIR website channel.
2. The guarantee chain transmits the information to the eTIR international system via the eTIR website. Once the connection will be restored, the eTIR international system will inform the guarantee chain accordingly in case it would try to register a guarantee already registered.
3. The guarantee chain transmits the information to the eTIR website database replica. The eTIR website database replica becomes the main source of information for all Customs administrations until the eTIR international system is restored. At that point, the eTIR international database and the eTIR website database replica will be synchronized.

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

3.1.2.1.2 Cancel guaranteePotential problems:

1. The guarantee chain system is not functioning.
2. The connection between the guarantee chain system and the eTIR international system is broken.
3. The eTIR international system is not functioning.

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Fall-backs:

1. The guarantee chain transmits the information to the eTIR international system through the eTIR website. The guarantee chain will update its system as soon as it is again functioning, keeping in mind that the guarantees concerned have already been cancelled in the eTIR international system. The eTIR international system will inform the guarantee chain accordingly in case it would try to cancel a guarantee already cancelled or not registered.
2. The guarantee chain transmits the information to the eTIR international system through the eTIR website. Once the connection will be restored, the eTIR international system will inform the guarantee chain accordingly in case it would try to cancel a guarantee already cancelled or not yet registered.
3. The guarantee chain transmits the information to the eTIR website database replica. The eTIR website database replica becomes the main source of information for all Customs administrations until the eTIR international system is restored. At that point, the eTIR international database and the eTIR website database replica will be synchronized.

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

3.1.2.1.3 Accept guaranteePotential problems:

1. The Customs system is not functioning.
2. The connection between the Customs system and the eTIR international system is broken.
3. The eTIR international system is not functioning.

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Fall-backs:

1. Customs authorities transmit the information via the eTIR website. Customs authorities will update their system as soon as it is again functioning, keeping in mind that the guarantee acceptance has already been registered in the eTIR international system. The eTIR website will provide the necessary information to Customs authorities in case they would try to accept guarantees which have already been accepted.
2. Customs authorities transmit the information via the eTIR website. The eTIR website will provide the necessary information to Customs authorities in case they would try to accept guarantees which have already been accepted.
3. Customs authorities transmit the information via the eTIR website. The eTIR website database replica becomes the main source of information for all Customs administrations until the eTIR international system is restored. At that point, the

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

eTIR international database and the eTIR website database replica will be synchronized.

#### 3.1.2.1.4 Get holder information

Potential problems:

1. The ITDB is not functioning.
2. The connection between the ITDB and the eTIR international system is broken.

Fall-backs:

1. The eTIR international system will use a local replica of the ITDB and include a warning code, informing that a replica of the ITDB is the source of the information and that the information might not be up to date.
2. Same as 1.

#### 3.1.2.1.5 Query guarantee

The query guarantee use case has three functions:

- (a) allowing Customs authorities and the guarantee chain to obtain information on a guarantee (e.g. status or type),
- (b) allowing Customs authorities and the guarantee chain to obtain information related to TIR transports and
- (c) allowing Customs authorities and the guarantee chain to obtain information related to TIR operations.

Potential problems:

1. The Customs or guarantee chain system is not functioning.
2. The connection between the Customs or guarantee chain system and the eTIR international system is broken.
3. The eTIR international system is not functioning.
4. The TIR transport has begun using a paper fall-back scenario.
5. A previous country in the TIR transport used a fallback procedure

Fall-backs:

1. (a) To request the status of a guarantee, Customs authorities or the guarantee chain use the eTIR website. (b) In order to obtain TIR transport information (mainly the declaration), the Customs office of departure can either use a national backup system, if available, or request the holder to provide his declaration in paper format. At other Customs offices, the declaration information in the accompanying document will be used and can be verified from the eTIR website. The guarantee chain will be able to obtain the information related to the TIR transport using the eTIR website. (c) The information on TIR operations can also be obtained from the eTIR website.
2. (a) To request the status of a guarantee, Customs authorities and the guarantee chain use the eTIR website. (b) At Customs offices, other than the first Customs office of departure, the TIR transport information in the accompanying document will be used and can be verified from the eTIR website. The guarantee chain will

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

be able to obtain the information related to the TIR transport using the eTIR website. (c) The information on TIR operations can also be obtained from the eTIR website.

3. (a) To request the information about the guarantee, Customs authorities and the guarantee chain use the eTIR website. (b) At Customs offices, other than the first Customs office of departure, the TIR transport information in the accompanying document will be used and can be verified from the eTIR website. The guarantee chain will be able to obtain the information related to the TIR transport using the eTIR website. (c) The information regarding TIR operation registered electronically before the breakdown will be available for querying once the eTIR system is functioning again. For TIR operations taking place while the eTIR system was not functioning, only a copy of the accompanying document can be made available after the TIR transport has ended.
4. (a) No fallback required (b) At Customs offices, other than the first Customs office of departure, the TIR transport information in the accompanying document will be used. The guarantee chain will be able to obtain the information related to the TIR transport in the form of a copy of the accompanying document after the end of the TIR transport. (c) Information related to previous TIR operations can be found on the accompanying document. The guarantee chain will be able to obtain the information related to the TIR operations in the form of a copy of the accompanying document after the end of the TIR transport.
5. (a) No fallback required (b) No fallback required. (c) Information related to previous TIR operations that were handled under the fallback procedure (including potential changes of the seals) can be found on the accompanying document. The guarantee chain will be able to obtain the information related to the TIR operations in the form of a copy of the accompanying document after the end of the TIR transport.

#### 3.1.2.2. Data exchange

The exchange of TIR transport data is a key element of the eTIR system. Customs authorities provide the holder with a paper accompanying document as reference. The paper accompanying document will also be used in case the information cannot be exchanged electronically. The information on TIR operations is also important but is considered of secondary importance and, therefore, will not be subject to fall-back procedures other than stamping the accompanying document.

A TIR transport started under a fall-back procedure will end under a fall-back procedure. If a fall-back procedure is used in a country of pure transit (no loading or unloading of goods), the following countries can still use the standard procedure but information regarding the operation carried out under the fall-back procedure will only be available on the accompanying document.

#### 3.1.2.2.1 Record consignment information

Potential problems:

1. The Customs system of the country of departure is not functioning.
2. The connection between the Customs system of the country of departure and the eTIR international system is broken.
3. The eTIR international system is not functioning.
4. Subsequent countries could not be notified.

Formatted: Numbered + Level: 1 +  
Numbering Style: 1, 2, 3, ... + Start at:  
1 + Alignment: Left + Aligned at: 2.7  
cm + Tab after: 3.34 cm + Indent at:  
3.34 cm

Fall-backs:

1. Customs authorities fill-in manually a paper accompanying document that will serve as the primary source of information for the TIR transport. The holder is informed that countries along the itinerary will not receive advance information. The holder remains responsible to comply with advance information requirements in subsequent countries. Alternatively, the TIR website allows Customs to record the consignment information.
2. The accompanying document produced by the Customs system becomes the primary source of information for the TIR transport. The holder is informed that countries along the itinerary will not receive advance information. The holder remains responsible to comply with advance information requirements in subsequent countries. Alternatively, the TIR website allows Customs to record the consignment information.
3. Same as 2.
4. The eTIR international system informs the Customs system that some subsequent countries could not be notified of the registration of this consignment. The Customs system will specifically mention (print) on the accompanying document that some countries did not receive the adequate information.

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

3.1.2.2.2. Update consignment information

The same potential problems and fall-backs as those of the record consignment use case apply. Moreover, if the TIR transport has already begun using a fall-back procedure, fall-back procedure 2 shall be used.

3.1.2.2.3. Start of TIR operation

For the Start of TIR operation use case the following differentiation applies:

- a. Customs office of departure and
- b. Customs office of entry.

Potential problems:

1. The Customs system is not functioning.
2. The connection between the Customs system and the eTIR international system is broken.
3. The eTIR international system is not functioning.
4. The TIR transport has begun using a paper fall-back scenario.

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Fall-backs:

1. (a) Customs authorities amend the accompanying document they have produced with the start operation information. Alternatively, the TIR website allows Customs to register the TIR operation start information. (b) Customs authorities accept the accompanying document as source for the declaration and revert to a paper procedure to start the TIR operation. Customs authorities amend the accompanying document with the start operation information. The start information will be keyed-in and transmitted to the eTIR international system once the system is working. Alternatively, the TIR website allows Customs to register the TIR operation start information.

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

2. (a) Customs authorities amend the accompanying document they have produced with the start operation information. Alternatively, the TIR website allows Customs to register the TIR operation start information. (b) Customs authorities accept the accompanying document as source for the declaration and manually key-in the information in their system. Customs authorities amend the accompanying document with the start operation information. The start information will be transmitted to the eTIR international system once the connection is re-established. Alternatively, the TIR website allows Customs to register the TIR operation start information.
3. (a) Customs authorities amend the accompanying document they have produced with the start operation information. Alternatively, the TIR website allows Customs to register the TIR operation start information. (b) Customs authorities accept the accompanying document as source for the declaration and manually key-in the information in their system. Customs authorities amend the accompanying document with the start operation information. The start information will be transmitted to the eTIR international system once it is functioning. Alternatively, the TIR website allows Customs to register the TIR operation start information.
4. (a) Not applicable. (b) Customs authorities accept the accompanying document as source for the declaration and, if nationally required, manually key-in the information in their system. The appropriate information is filled-in on the accompanying document. No information is transmitted to the eTIR international system.

#### 3.1.2.2.4 Terminate TIR operation

##### Potential problems:

1. The Customs system is not functioning.
2. The connection between the Customs system and the eTIR international system is broken.
3. The eTIR international system is not functioning.
4. The TIR transport has begun using a paper fall-back scenario.

##### Fall-backs:

1. Customs authorities accept the accompanying document as source for the declaration and revert to a paper procedure to terminate the TIR operation. The appropriate information is filled-in on the accompanying document. The termination information will be keyed-in and transmitted to the eTIR international system once the system is working. Alternatively, the TIR website allows Customs to register the TIR operation termination information.
2. Customs authorities accept the accompanying document as source for the declaration and manually key-in the information in their system. The appropriate information is filled-in on the accompanying document. The termination information will be transmitted to the eTIR international system once the connection is re-established. Alternatively, the TIR website allows Customs to register the TIR operation termination information.
3. Customs authorities accept the accompanying document as source for the declaration and manually key-in the information in their system. The appropriate information is filled-in on the accompanying document. The termination

Formatted: Numbered + Level: 1 +  
Numbering Style: 1, 2, 3, ... + Start at:  
1 + Alignment: Left + Aligned at: 2.7  
cm + Tab after: 3.34 cm + Indent at:  
3.34 cm

Formatted: Numbered + Level: 1 +  
Numbering Style: 1, 2, 3, ... + Start at:  
1 + Alignment: Left + Aligned at: 2.7  
cm + Tab after: 3.34 cm + Indent at:  
3.34 cm

information will be transmitted to the eTIR international system once it is functioning. Alternatively, the TIR website allows Customs to register the TIR operation termination information.

4. Customs authorities accept the accompanying document as source for the declaration and, if nationally required, manually key-in the information in their system. The appropriate information is filled-in on the accompanying document. No information is transmitted to the eTIR international system.

3.1.2.2.5. Discharge TIR operation

Potential problems:

1. The Customs system is not functioning.
2. The connection between the Customs system and the eTIR international system is broken.
3. The eTIR international system is not functioning.
4. The TIR transport has begun using a paper fall-back scenario.

Fall-backs:

1. Customs authorities postpone the transmission of the discharge information until the system is working. Alternatively, the TIR website allows Customs to register the TIR operation discharge information.
2. Customs authorities postpone the transmission of the discharge information until the connection is re-established. . Alternatively, the TIR website allows Customs to register the TIR operation discharge information.
3. Same as 1.
4. No information is transmitted to the eTIR international system.

3.1.2.2.6. Notify guarantee chain

Potential problems:

1. The guarantee chain system is not functioning.
2. The connection between the guarantee chain system and the eTIR international system is broken.

Fall-backs:

1. The eTIR international system ensures that the information will be sent at a later stage.
2. Same as 1.

3.1.2.2.7. Notify subsequent countries

Potential problems:

1. The Customs system of one country along the itinerary is not functioning.
2. The connection between the Customs system of one country along the itinerary and the eTIR international system is broken.

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

Formatted: Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 2.7 cm + Tab after: 3.34 cm + Indent at: 3.34 cm

---

**Fall-backs:**

1. The eTIR international system ensures that the information will be sent at a later stage. If the holder presents himself to a Customs office, whose system is not functioning, the accompanying document will be used as source of information.
2. The eTIR international system ensures that the information will be sent at a later stage. If the holder presents himself to a Customs office, whose system is not linked to the eTIR system, the accompanying document will be used as source of information.

---

**3.2. Data Analysis**

The class diagrams below are based on the class diagram presented in Chapter 2 and are aligned to the standard WCO transit data model version 3.2.<sup>17</sup> Whereas the class diagrams in Chapter 2 only contained the class names and the relationships between classes, they now show the attributes and methods of each class. The methods allow for interactions between objects and/or actors as presented in the sequence diagrams in Chapter 3.1. The attributes are used in Chapter 4 as the data elements of the electronic messages and, together with the relationships, serve to design database structures used in the eTIR international system.

Three class diagrams are presented separately to facilitate the reading. As a consequence, the classes guarantee, goods, Customs office, country, holder can be found in more than one diagram.

---

**3.2.1. Management by Customs of data on guarantees class diagram**

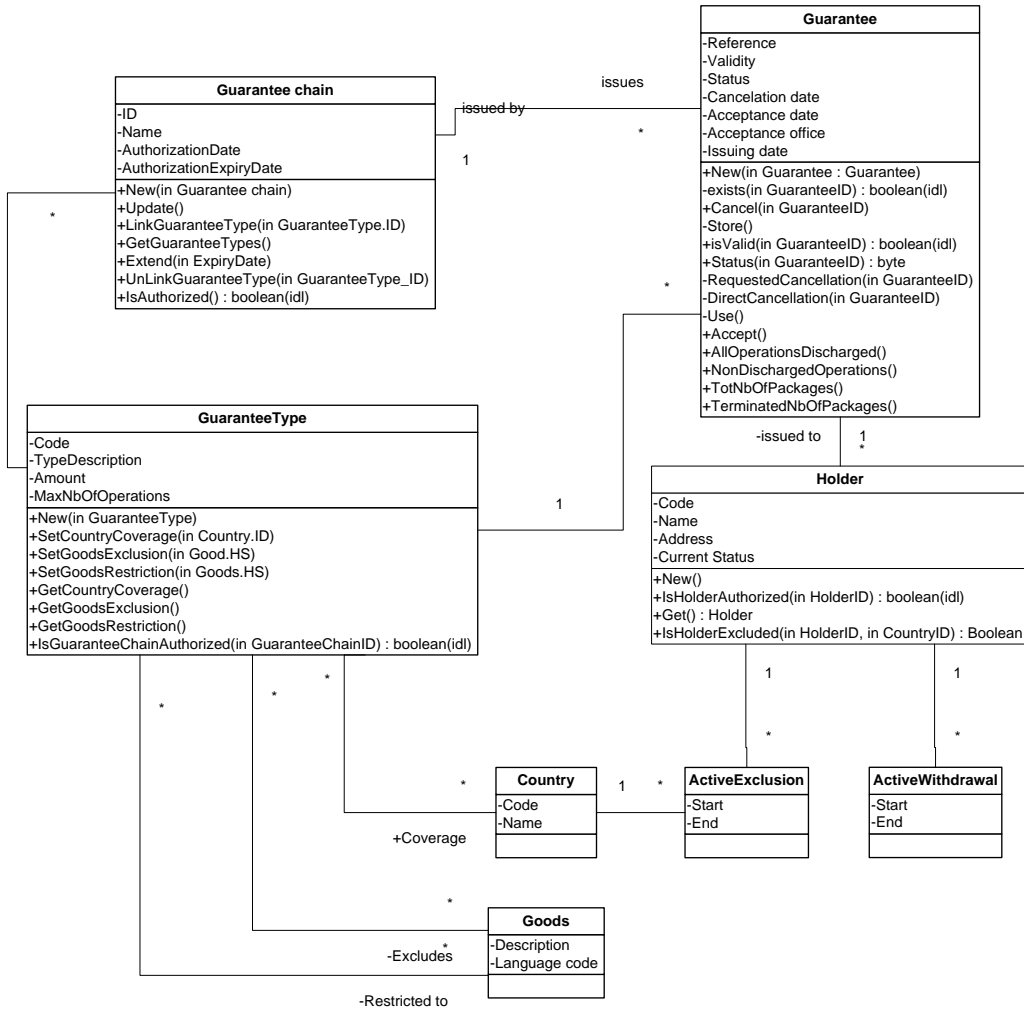

The management by Customs of data on guarantees class diagram presents the classes involved in providing guarantee-related information and the relationships between these classes.

Formatted: Numbered + Level: 1 +  
Numbering Style: 1, 2, 3, ... + Start at:  
1 + Alignment: Left + Aligned at: 2.7  
cm + Tab after: 3.34 cm + Indent at:  
3.34 cm

---

<sup>17</sup> The WCO Council should approve the WCO data model version 3.2 by the end of 2011.

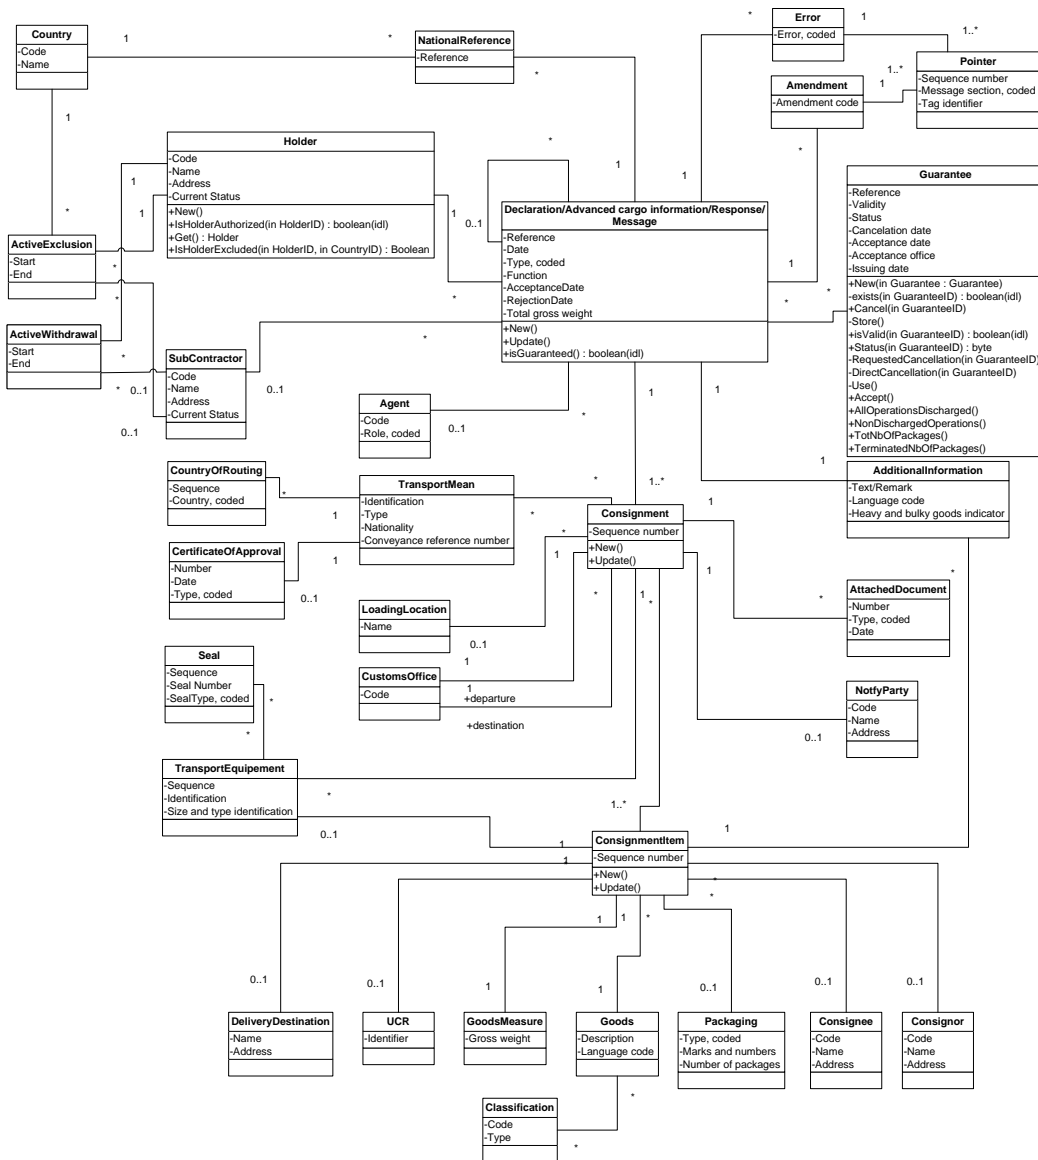

**Figure 3.14:**  
**Customs management of guarantees class diagram**

**3.2.2. Declaration class diagram**

The declaration class diagram presents the classes involved in the exchange of declaration-related information and the relationships between these classes.

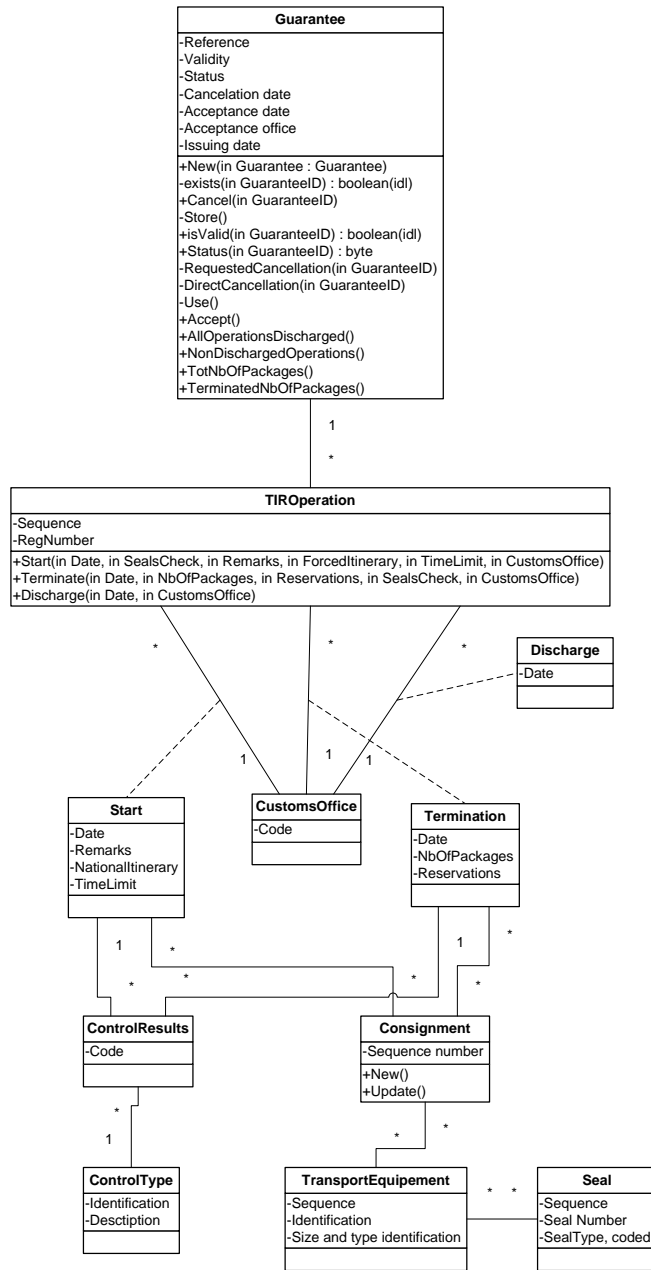

**Figure 3.15:**  
**Declaration class diagram**

**3.2.3. TIR operations class diagram**

The TIR operation class diagram presents the classes involved in the exchange of operation-related information and the relationships between these classes.

**Figure 3.16:**  
**Data exchange class diagram**

Formatted: Indent: Left: 2 cm

### **3.2.4 Lists of electronic messages**

#### **3.2.4.1 External messages**

External messages are used to exchange information between Customs systems (including the eTIR international system) and other actors (guarantee chain and holder).

Table 3.1:

#### **External messages**

<i>No.</i>	<i>Description</i>	<i>Response to:</i>
<u>E1</u>	<u>Register guarantee</u>	=
<u>E2</u>	<u>Registration results</u>	<u>E1</u>
<u>E3</u>	<u>Cancel guarantee</u>	=
<u>E4</u>	<u>Cancellation results</u>	<u>E3</u>
<u>E5</u>	<u>Query guarantee</u>	=
<u>E6</u>	<u>Query results</u>	<u>E5</u>
<u>E7</u>	<u>Notify guarantee chain</u>	=
<u>E8</u>	<u>Notification confirmation</u>	<u>E7</u>
<u>E9</u>	<u>Advance Cargo Information</u>	=
<u>E10</u>	<u>Advance Cargo Information results</u>	<u>E9</u>

#### **3.2.4.2 Internal messages**

Internal messages refer to the messages exchanged within the Customs international environment (between the eTIR international system and national Customs system).

Table 3.2:

#### **Internal messages**

<i>No.</i>	<i>Description</i>	<i>Response to:</i>
<u>I1</u>	<u>Accept Guarantee</u>	=
<u>I2</u>	<u>Acceptance results</u>	<u>I1</u>
<u>I3</u>	<u>Get holder info</u>	=
<u>I4</u>	<u>Holder info</u>	<u>I3</u>
<u>I5</u>	<u>Query guarantee</u>	=
<u>I6</u>	<u>Query results</u>	<u>I5</u>
<u>I7</u>	<u>Record Advance Cargo Information</u>	=
<u>I8</u>	<u>Record Advance Cargo Information results</u>	<u>I7</u>
<u>I9</u>	<u>Start TIR operation</u>	=
<u>I10</u>	<u>Start results</u>	<u>I9</u>
<u>I11</u>	<u>Terminate TIR operation</u>	=

<i>No.</i>	<i>Description</i>	<i>Response to:</i>
<u>I12</u>	<u>Termination results</u>	<u>I11</u>
<u>I13</u>	<u>Discharge TIR operation</u>	=
<u>I14</u>	<u>Discharge results</u>	<u>I13</u>
<u>I15</u>	<u>Notify Customs</u>	=
<u>I16</u>	<u>Notification confirmation</u>	<u>I15</u>

**3.2.5. Electronic messages data elements**

3.2.5.1. External messages

3.2.5.1.1. E1 – Register guarantee

a. Introduction

This message allows the Guarantee chain to register one or multiple guarantees in the eTIR international system.

Description	NOT USED

### 3.2.6.2 Rules

Number	R001
Description	Each country of transit shall have an unique sequence number. They should be numbered from 1 to the number of countries involved in the transit and represent the order in which countries are traveled from departure to destination. In case of multiple means of transport, this will also allow to determine in which order the means of transport are used.
Number	R002
Description	If the Message confirms the reception of Advanced Cargo information then "National Reference" must be provided.
Number	R003
Description	Re-use a sequence number to indicate that a seal has been replaced.
Number	R004
Description	Use new sequence number only to mention additional seals.
Number	R005
Description	Indicate that a seal has been removed and not replaced with an "X" in the "seals number" field of the transport equipment sequence corresponding to the removed seal.

Formatted Table

Number R006

Description Mandatory in case the seals have been changed, added or removed.

Number R007

Description In case of multiple consignments all transport equipment used must be listed only under the first consignment.

### 3.2.7 Overview of Changes

#### 3.2.7.1 E1 - Register guarantee

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'

#### 3.2.7.2 E2 - Register results

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Error		Changed cardinality from 0..1 to 0..unbounded

#### 3.2.7.3 E3 - Cancel guarantee

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'

#### 3.2.7.4 E4 - Cancellation results

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Error		Changed cardinality from 0..1 to 0..unbounded

#### 3.2.7.5 E5 - Query guarantee

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Message	Sub type, coded	Replaces 'GUARANTEE.Query type' and uses CL09 (Message sub type)
Guarantee	Query Type	Attribute "Query type" removed and replaced by ""MESSAGE.Sub type, coded""

3.2.7.26 E6 - Query results

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Start.consignment		Removed ConsignmentItem class, Seals information is provided under <u>Consignment.TransportEquipment.Seals</u> New Rules: R006 and R007
Start.consignment.transportequipment		Added new TransportEquipment class
Start.consignment.transportequipment.Seal		Added new SEAL class
Termination.consignment		Removed ConsignmentItem class, Seals information is provided under <u>Consignment.TransportEquipment.Seals</u> New Rules: R006 and R007
Termination.consignment.Transportequipment		Added new TransportEquipment class
Termination.consignment.Transportequipment.seal		Added new SEAL class
Declaration.consignment.Consignmentitem.transportequipment		The attributes 'Seal number' and 'Size and type identification' moved to 'Consignment.TransportEquipment.Seals' and 'Consignment.TransportEquipment' class.
Countryofrouting		New Rule R001
Itinerary	Sequence	Added sequence to the Itinerary class
Declaration.consignment.Transportequipment		Added new Class "TransportEquipment"
Declaration.consignment.Transportequipment	Sequence number	Added new data element
Declaration.consignment.Transportequipment	Size and type identification	Data element moved from <u>ConsignmentItem.TransportEquipment</u>
Declaration.consignment.Transportequipment	Identification	Also added to Consignment level.
Declaration.consignment.Transporterquipment.seal		Added new SEAL class
Error		Changed cardinality from 0..1 to 0..unbounded

3.2.7.27 E7 - Notify guarantee chain

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Message	Sub type, coded	Replaces 'NOTIFICATION.Code' and uses CL09 (Sub type, coded)
Notification	Code	Removed Notification class. The attribute 'Code' is replaced by MESSAGE.Sub type, coded.

3.2.7.28 E8 - Notification confirmation

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Error		Changed cardinality from 0..1 to 0..unbounded

3.2.7.29 E9 - Advanced cargo information

ENTITY	ATTRIBUTE	CHANGE
Transportequipment		The attributes 'Seal number' and 'Size and type identification' moved to 'Consignment.TransportEquipment' class.
Countryofrouting		New Rule R001
Itinerary	Sequence number	Added sequence to the Itinerary class Not mapped to EDIFACT. Mapping to EDIFACT will be possible in the next version of the GOVCBR.
Consignment.transportmean. Additionaldocument		Occurance changed from 0..Unbounded to 0..1
Consignment.transportequipment		Added new TransportEquipment class
Consignment.transportequipment	Sequence number	Added new data element
Consignment.transportequipment	Size and type identification	Data element moved from ConsignmentItem.TransportEquipment
Consignment.transportequipment	Identification	Also added to Consignment level.
Consignment.transportequipment.seal		Added new SEAL class
Consignment.transportequipment.seal	Sequence number	Not mapped to EDIFACT. Mapping to EDIFACT will be possible in the next version of the GOVCBR.
Guarantee		Cardinality between Guarantee and Declaration changed from 1..1 to 1..unbounded. To increase flexibility
Guarantee	Validity	Removed attribute "Validity".

3.2.7.210 I1 - Accept guarantee

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'

3.2.7.112 I2 - Acceptance results

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Error		Changed cardinality from 0..1 to 0..unbounded

3.2.7.212 I3 - Get holder information

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'

3.2.7.213 I4 - Holder information

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Error		Changed cardinality from 0..1 to 0..unbounded

3.2.7.214 I5 - Query guarantee

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Message	Sub type, coded	Replaces 'GUARANTEE.Query type'
Guarantee	Query Type	Attribute "Query type" removed and replaced by "MESSAGE.Sub type, coded"

3.2.7.215 16 - Query results

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Start.consignment		Removed ConsignmentItem class. Seals information is provided under onsignment.TransportEquipment. Seals New Rules: R006 and R007
Start.consignment.transportequipment		Added new TransportEquipment class
Start.consignment.transportequipment. Seal		Added new SEAL class
Termination.consignment		Removed ConsignmentItem class. Seals information is provided under onsignment.TransportEquipment. Seals New Rules: R006 and R007
Termination.consignment. Transportequipment		Added new TransportEquipment class
Termination.consignment. Transportequipment.seal		Added new SEAL class
Declaration.consignment. Consignmentitem.transportequipment		The attributes 'Seal number' and 'Size and type identification' moved to 'Consignment.TransportEquipment.Seals' and 'Consignment. TransportEquipment' class.
Countryofrouting		New Rule R001
Itinerary	Sequence	Added sequence to the Itinerary class
Transportequipment		Added new Class "TransportEquipment"
Declaration.consignment. Transportequipment	Sequence number	Added new data element
Declaration.consignment. Transportequipment	Size and type identification	Data element moved from ConsignmentItem.TransportEquipment
Declaration.consignment. Transportequipment	Identification	Also added to Consignment level.
Declaration.consignment. Transporterquipment.seal		Added new SEAL class
Error		Changed cardinality from 0..1 to 0..unbounded

### 3.2.7.216 17 - Record advanced cargo Information

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Transportequipment		The attributes 'Seal number' and 'Size and type identification' moved to 'Consignment.TransportEquipment' class.
Countryofrouting		New Rule R001
Transportequipment		Added new TransportEquipment class
Consignment.transportequipment		Added new Class "TransportEquipment" New rule R003
Consignment.transportequipment	Sequence number	Added new data element
Consignment.transportequipment	Size and type identification	Data element moved from ConsignmentItem.TransportEquipment
Consignment.transportequipment	Identification	Also added to Consignment level.
Consignment.transportequipment.seal		Added new SEAL class
Guarantee		Changed occurrence from 1..1 to 1..Unbounded

### 3.2.7.217 18 - Record advanced cargo information results

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Nationalreference		Cardinellity changed to 0..1
Error		Changed cardinality from 0..1 to 0..unbounded

### 3.2.7.182 19 - Start TIR operation

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Start.consignment		Removed ConsignmentItem class. Seals information is provided under onsignment.TransportEquipment. Seals New Rules: R006 and R007
Start.consignment.transportequipment		Added new TransportEquipment class
Start.consignment.transportequipment. Seal		Added new SEAL class

3.2.7.192 I10 - Start results

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Error		Changed cardinality from 0..1 to 0..unbounded

3.2.7.220 I11 - Terminate TIR operation

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Termination.consignment		Removed ConsignmentItem class. Seals information is provided under onsignment.TransportEquipment. Seals New Rules: R006 and R007
Termination.consignment. Transportequipment		Added new TransportEquipment class
Termination.consignment. Transportequipment.seal		Added new SEAL class

3.2.7.21 I12 - Termination results

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Error		Changed cardinality from 0..1 to 0..unbounded

3.2.7.22 I13 - Discharge TIR operation

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'

### 3.2.7.23 I14 - Discharge results

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Error		Changed cardinality from 0..1 to 0..unbounded

### 3.2.7.24 I15 - Notify Customs

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Start.consignment		Removed ConsignmentItem class. Seals information is provided under onsignment.TransportEquipment, Seals New Rules: R006 and R007
Start.consignment.transportequipment		Added new TransportEquipment class
Start.consignment.transportequipment, Seal		Added new SEAL class
Termination.consignment		Removed ConsignmentItem class. Seals information is provided under onsignment.TransportEquipment, Seals New Rules: R006 and R007
Termination.consignment, Transportequipment		Added new TransportEquipment class
Termination.consignment, Transportequipment.seal		Added new SEAL class
Declaration.consignment, Consignmentitem.transportequipment		The attributes 'Seal number' and 'Size and type identification' moved to 'Consignment,TransportEquipment,Seals' and 'Consignment, TransportEquipment' class.
Countryofrouting		New Rule R001
Itinerary	Sequence	Added sequence to the Itinerary class
Transportequipment		Added new Class "TransportEquipment"
Declaration.consignment, Transportequipment	Sequence number	Added new data element
Declaration.consignment, Transportequipment	Size and type identification	Data element moved from ConsignmentItem.TransportEquipment
Declaration.consignment, Transportequipment	Identification	Also added to Consignment level.
Declaration.consignment, Transporterquipment.seal		Added new SEAL class

3.2.7.25 116 – Notification confirmation

ENTITY	ATTRIBUTE	CHANGE
Message	Sender identificatie	Removed 'Sender identification' from the Data model. Is technical attribute.
Message	type	CL06 (Document name code) replaced by CL26 (Message sub types) Name of CL26 changed from 'Message sub types' to 'Message types'
Error		Changed cardinality from 0..1 to 0..unbounded

## 3.2.8.4 CL03 - Item type identification code

<u>CL03</u>	<u>Item type identification code</u> <u>Coded identification of an item type.</u>
<u>AA</u>	<u>Product version number</u> <u>Number assigned by manufacturer or seller to identify the release of a product.</u>
<u>AB</u>	<u>Assembly</u> <u>The item number is that of an assembly.</u>
<u>AC</u>	<u>HIBC (Health Industry Bar Code)</u> <u>Article identifier used within health sector to indicate data used conforms to HIBC.</u>
<u>AD</u>	<u>Cold roll number</u> <u>Number assigned to a cold roll.</u>
<u>AE</u>	<u>Hot roll number</u> <u>Number assigned to a hot roll.</u>
<u>AF</u>	<u>Slab number</u> <u>Number assigned to a slab, which is produced in a particular production step.</u>
<u>AG</u>	<u>Software revision number</u> <u>A number assigned to indicate a revision of software.</u>
<u>AH</u>	<u>UPC (Universal Product Code) Consumer package code (1-5-5)</u> <u>An 11-digit code that uniquely identifies consumer packaging of a product; does not have a check digit.</u>
<u>AI</u>	<u>UPC (Universal Product Code) Consumer package code (1-5-5-1)</u> <u>A 12-digit code that uniquely identifies the consumer packaging of a product, including a check digit.</u>
<u>AJ</u>	<u>Sample number</u> <u>Number assigned to a sample.</u>
<u>AK</u>	<u>Pack number</u> <u>Number assigned to a pack containing a stack of items put together (e.g. cold roll sheets (steel product)).</u>
<u>AL</u>	<u>UPC (Universal Product Code) Shipping container code (1-2- 5-5)</u> <u>A 13-digit code that uniquely identifies the manufacturer's shipping unit, including the packaging indicator.</u>
<u>AM</u>	<u>UPC (Universal Product Code)/EAN (European article number) Shipping container code (1-2-5-5-1)</u> <u>A 14-digit code that uniquely identifies the manufacturer's shipping unit, including the packaging indicator and the check digit.</u>
<u>AN</u>	<u>UPC (Universal Product Code) suffix</u> <u>A suffix used in conjunction with a higher level UPC (Universal product code) to define packing variations for a product.</u>
<u>AO</u>	<u>State label code</u> <u>A code which specifies the codification of the state's labelling requirements.</u>
<u>AP</u>	<u>Heat number</u> <u>Number assigned to the heat (also known as the iron charge) for the production of steel products.</u>
<u>AQ</u>	<u>Coupon number</u> <u>A number identifying a coupon.</u>
<u>AR</u>	<u>Resource number</u> <u>A number to identify a resource.</u>
<u>AS</u>	<u>Work task number</u> <u>A number to identify a work task.</u>
<u>AT</u>	<u>Price look up number</u> <u>Identification number on a product allowing a quick electronic retrieval of price information for that product.</u>
<u>AU</u>	<u>NSN (North Atlantic Treaty Organization Stock Number)</u> <u>Number assigned under the NATO (North Atlantic Treaty Organization) codification system to provide the identification of an approved item of supply.</u>

Formatted Table

<b>CL03</b>	<b>Item type identification code</b> <b>Coded identification of an item type.</b>
<b>AV</b>	<b>Refined product code</b> <b>A code specifying the product refinement designation.</b>
<b>AW</b>	<b>Exhibit</b> <b>A code indicating that the product is identified by an exhibit number.</b>
<b>AX</b>	<b>End item</b> <b>A number specifying an end item.</b>
<b>AY</b>	<b>Federal supply classification</b> <b>A code to specify a product's Federal supply classification.</b>
<b>AZ</b>	<b>Engineering data list</b> <b>A code specifying the product's engineering data list.</b>
<b>BA</b>	<b>Milestone event number</b> <b>A number to identify a milestone event.</b>
<b>BB</b>	<b>Lot number</b> <b>A number indicating the lot number of a product.</b>
<b>BC</b>	<b>National drug code 4-4-2 format</b> <b>A code identifying the product in national drug format 4-4-2.</b>
<b>BD</b>	<b>National drug code 5-3-2 format</b> <b>A code identifying the product in national drug format 5-3-2.</b>
<b>BE</b>	<b>National drug code 5-4-1 format</b> <b>A code identifying the product in national drug format 5-4-1.</b>
<b>BF</b>	<b>National drug code 5-4-2 format</b> <b>A code identifying the product in national drug format 5-4-2.</b>
<b>BG</b>	<b>National drug code</b> <b>A code specifying the national drug classification.</b>
<b>BH</b>	<b>Part number</b> <b>A number indicating the part.</b>
<b>BI</b>	<b>Local Stock Number (LSN)</b> <b>A local number assigned to an item of stock.</b>
<b>BJ</b>	<b>Next higher assembly number</b> <b>A number specifying the next higher assembly or component into which the product is being incorporated.</b>
<b>BK</b>	<b>Data category</b> <b>A code specifying a category of data.</b>
<b>BL</b>	<b>Control number</b> <b>To specify the control number.</b>
<b>BM</b>	<b>Special material identification code</b> <b>A number to identify the special material code.</b>
<b>BN</b>	<b>Locally assigned control number</b> <b>A number assigned locally for control purposes.</b>
<b>BO</b>	<b>Buyer's colour</b> <b>Colour assigned by buyer.</b>
<b>BP</b>	<b>Buyer's part number</b> <b>Reference number assigned by the buyer to identify an article.</b>
<b>BQ</b>	<b>Variable measure product code</b> <b>A code assigned to identify a variable measure item.</b>
<b>BR</b>	<b>Financial phase</b> <b>To specify as an item, the financial phase.</b>
<b>BS</b>	<b>Contract breakdown</b> <b>To specify as an item, the contract breakdown.</b>
<b>BT</b>	<b>Technical phase</b> <b>To specify as an item, the technical phase.</b>
<b>BU</b>	<b>Dye lot number</b> <b>Number identifying a dye lot.</b>
<b>BV</b>	<b>Daily statement of activities</b> <b>A statement listing activities of one day.</b>

Formatted Table

Formatted: Font: Bold

<b>BW</b>	<u>Periodical statement of activities within a bilaterally agreed time period</u> <u>Periodical statement listing activities within a bilaterally agreed time period.</u>
<b>BX</b>	<u>Calendar week statement of activities</u> <u>A statement listing activities of a calendar week.</u>
<b>BY</b>	<u>Calendar month statement of activities</u> <u>A statement listing activities of a calendar month.</u>
<b>BZ</b>	<u>Original equipment number</u> <u>Original equipment number allocated to spare parts by the manufacturer.</u>
<b>CC</b>	<u>Industry commodity code</u> <u>The codes given to certain commodities by an industry.</u>
<b>CG</b>	<u>Commodity grouping</u> <u>Code for a group of articles with common characteristics (e.g. used for statistical purposes).</u>
<b>CL</b>	<u>Colour number</u> <u>Code for the colour of an article.</u>
<b>CR</b>	<u>Contract number</u> <u>Reference number identifying a contract.</u>
<b>CV</b>	<u>Customs article number</u> <u>Code defined by Customs authorities to an article or a group of articles for Customs purposes.</u>
<b>DR</b>	<u>Drawing revision number</u> <u>Reference number indicating that a change or revision has been applied to a drawing.</u>
<b>DW</b>	<u>Drawing</u> <u>Reference number identifying a drawing of an article.</u>
<b>EC</b>	<u>Engineering change level</u> <u>Reference number indicating that a change or revision has been applied to an article's specification.</u>
<b>EF</b>	<u>Material code</u> <u>Code defining the material's type, surface, geometric form plus various classifying characteristics.</u>
<b>EN</b>	<u>International Article Numbering Association (EAN)</u> <u>Number assigned to a manufacturer's product according to the International Article Numbering Association.</u>
<b>GB</b>	<u>Buyer's internal product group code</u> <u>Product group code used within a buyer's internal systems.</u>
<b>GN</b>	<u>National product group code</u> <u>National product group code. Administered by a national agency.</u>
<b>GS</b>	<u>General specification number</u> <u>The item number is a general specification number.</u>
<b>HS</b>	<u>Harmonised system</u> <u>The item number is part of, or is generated in the context of the Harmonised Commodity Description and Coding System (Harmonised System), as developed and maintained by the World Customs Organization (WCO).</u>
<b>IB</b>	<u>ISBN (International Standard Book Number)</u> <u>A unique number identifying a book.</u>
<b>IN</b>	<u>Buyer's item number</u> <u>The item number has been allocated by the buyer.</u>
<b>IS</b>	<u>ISSN (International Standard Serial Number)</u> <u>A unique number identifying a serial publication.</u>
<b>IT</b>	<u>Buyer's style number</u> <u>Number given by the buyer to a specific style or form of an article, especially used for garments.</u>
<b>IZ</b>	<u>Buyer's size code</u> <u>Code given by the buyer to designate the size of an article in textile and shoe industry.</u>

Formatted Table

<b>CL03</b>	<b>Item type identification code</b> <b>Coded identification of an item type.</b>
<b>MA</b>	<b>Machine number</b> <u>The item number is a machine number.</u>
<b>MF</b>	<b>Manufacturer's (producer's) article number</b> <u>The number given to an article by its manufacturer.</u>
<b>MN</b>	<b>Model number</b> <u>Reference number assigned by the manufacturer to differentiate variations in similar products in a class or group.</u>
<b>MP</b>	<b>Product/service identification number</b> <u>Reference number identifying a product or service.</u>
<b>NB</b>	<b>Batch number</b> <u>The item number is a batch number.</u>
<b>ON</b>	<b>Customer order number</b> <u>Reference number of a customer's order.</u>
<b>PD</b>	<b>Part number description</b> <u>Reference number identifying a description associated with a number ultimately used to identify an article.</u>
<b>PL</b>	<b>Purchaser's order line number</b> <u>Reference number identifying a line entry in a customer's order for goods or services.</u>
<b>PO</b>	<b>Purchase order number</b> <u>Reference number identifying a customer's order.</u>
<b>PV</b>	<b>Promotional variant number</b> <u>The item number is a promotional variant number.</u>
<b>QS</b>	<b>Buyer's qualifier for size</b> <u>The item number qualifies the size of the buyer.</u>
<b>RC</b>	<b>Returnable container number</b> <u>Reference number identifying a returnable container.</u>
<b>RN</b>	<b>Release number</b> <u>Reference number identifying a release from a buyer's purchase order.</u>
<b>RU</b>	<b>Run number</b> <u>The item number identifies the production or manufacturing run or sequence in which the item was manufactured, processed or assembled.</u>
<b>RY</b>	<b>Record keeping of model year</b> <u>The item number relates to the year in which the particular model was kept.</u>
<b>SA</b>	<b>Supplier's article number</b> <u>Number assigned to an article by the supplier of that article.</u>
<b>SG</b>	<b>Standard group of products (mixed assortment)</b> <u>The item number relates to a standard group of other items (mixed) which are grouped together as a single item for identification purposes.</u>
<b>SK</b>	<b>SKU (Stock keeping unit)</b> <u>Reference number of a stock keeping unit.</u>
<b>SN</b>	<b>Serial number</b> <u>Identification number of an item which distinguishes this specific item out of a number of identical items.</u>
<b>SRS</b>	<b>RSK number</b> <u>Plumbing and heating.</u>
<b>SRT</b>	<b>IFLS (Institut Francais du Libre Service) 5 digit product classification code</b> <u>5 digit code for product classification managed by the Institut Francais du Libre Service.</u>
<b>SRU</b>	<b>IFLS (Institut Francais du Libre Service) 9 digit product classification code</b> <u>9 digit code for product classification managed by the Institut Francais du Libre Service.</u>
<b>SRV</b>	<b>EAN.UCC Global Trade Item Number</b> <u>A unique number, up to 14-digits, assigned according to the numbering structure of the EAN.UCC system. 'EAN' stands for the 'International Article Numbering Association', and 'UCC' for the 'Uniform Code Council'.</u>

<b>CL06</b>	<b>Document name code</b> <b>Code specifying the document name.</b> <b>UN Edifact codes TDID 1001</b>
17	<u>Combined certificate of value and origin</u> Document identifying goods in which the issuing authority expressly certifies that the goods originate in a specific country or part of, or group of countries. It also states the price and/or cost of the goods with the purpose of determining the customs origin.
18	<u>Movement certificate A.TR.1</u> Specific form of transit declaration issued by the exporter (movement certificate).
19	<u>Certificate of quantity</u> Certificate certifying the quantity of goods, services etc.
20	<u>Quality data message</u> Usage of QALITY-message.
21	<u>Query</u> Request information based on defined criteria.
22	<u>Response to query</u> Document/message returned as an answer to a question.
23	<u>Status information</u> Information regarding the status of a related message.
24	<u>Restow</u> Message/document identifying containers that have been unloaded and then reloaded onto the same means of transport.
25	<u>Container discharge list</u> Message/document itemising containers to be discharged from vessel.
26	<u>Corporate superannuation contributions advice</u> Document/message providing contributions advice used for corporate superannuation schemes.
27	<u>Industry superannuation contributions advice</u> Document/message providing contributions advice used for superannuation schemes which are industry wide.
28	<u>Corporate superannuation member maintenance message</u> Member maintenance message used for corporate superannuation schemes.
29	<u>Industry superannuation member maintenance message</u> Member maintenance message used for industry wide superannuation schemes.
30	<u>Life insurance payroll deductions advice</u> Payroll deductions advice used in the life insurance industry.
31	<u>Underbond request</u> A Message/document requesting to move cargo from one Customs control point to another.
32	<u>Underbond approval</u> A message/document issuing Customs approval to move cargo from one Customs control point to another.
33	<u>Certificate of sealing of export meat lockers</u> Document / message issued by the authority in the exporting country evidencing the sealing of export meat lockers.
34	<u>Cargo status</u> Message identifying the status of cargo.
35	<u>Inventory report</u> A message specifying information relating to held inventories.
36	<u>Identity card</u> Official document to identify a person.
37	<u>Response to a trade statistics message</u> Document/message in which the competent national authorities provide a declarant with an acceptance or a rejection about a received declaration for European statistical purposes.

425	<u>Collection payment advice</u> Document/message whereby a bank advises that a collection has been paid, giving details and methods of funds disposal.
426	<u>Documentary credit payment advice</u> Document/message whereby a bank advises payment under a documentary credit.
427	<u>Documentary credit acceptance advice</u> Document/message whereby a bank advises acceptance under a documentary credit.
428	<u>Documentary credit negotiation advice</u> Document/message whereby a bank advises negotiation under a documentary credit.
429	<u>Application for banker's guarantee</u> Document/message whereby a customer requests his bank to issue a guarantee in favour of a nominated party in another country, stating the amount and currency and the specific conditions of the guarantee.
430	<u>Banker's guarantee</u> Document/message in which a bank undertakes to pay out a limited amount of money to a designated party, on conditions stated therein (other than those laid down in the Uniform Customs Practice).
431	<u>Documentary credit letter of indemnity</u> Document/message in which a beneficiary of a documentary credit accepts responsibility for non-compliance with the terms and conditions of the credit, and undertakes to refund the money received under the credit, with interest and charges accrued.
432	<u>Notification to grid operator of contract termination</u> Notification to the grid operator regarding the termination of a contract.
433	<u>Notification to grid operator of metering point changes</u> Notification to the grid operator about changes regarding a metering point.
434	<u>Notification of balance responsible entity change</u> Notification of a change of balance responsible entity.
435	<u>Preadvice of a credit</u> Preadvice indicating a credit to happen in the future.
436	<u>Transport equipment profile report</u> Report on the profile of transport equipment.
437	<u>Request for price and delivery quote, specified end-user</u> Document/message requesting price conditions and delivery conditions under which goods are offered, provided that they are sold to the end-customer specified on the request for quote.
438	<u>Request for price quote, ship and debit</u> Document/message from a distributor to a supplier requesting price conditions under which goods can be sold by the distributor to the end-customer specified on the request for quote with compensation for loss of inventory value.
439	<u>Request for price and delivery quote, ship and debit</u> Document/message from a distributor to a supplier requesting price conditions and delivery conditions under which goods can be sold by the distributor to the end-customer specified on the request for quote with compensation for loss of inventory value.
440	<u>Delivery point list</u> A list of delivery point addresses.

<u>441</u>	<u>Transport routing information</u> Document specifying the routes for transport between locations.
<u>442</u>	<u>Request for delivery quote</u> Document/message requesting delivery conditions under which goods are offered.
<u>443</u>	<u>Request for price and delivery quote</u> Document/message requesting price and delivery conditions under which goods are offered.
<u>444</u>	<u>Request for contract price quote</u> Document/message requesting contractual price conditions under which goods are offered.
<u>445</u>	<u>Request for contract price and delivery quote</u> Document/message requesting contractual price conditions and contractual delivery conditions under which goods are offered.
<u>446</u>	<u>Request for price quote, specified end-customer</u> Document/message requesting price conditions under which goods are offered, provided that they are sold to the end-customer specified on the request for quote.
<u>447</u>	<u>Collection order</u> Document/message whereby a bank is instructed (or requested) to handle financial and/or commercial documents in order to obtain acceptance and/or payment, or to deliver documents on such other terms and conditions as may be specified.
<u>448</u>	<u>Documents presentation form</u> Document/message whereby a draft or similar instrument and/or commercial documents are presented to a bank for acceptance, discounting, negotiation, payment or collection, whether or not against a documentary credit.
<u>449</u>	<u>Identification match</u> Message related to conducting a search for an identification match.
<u>450</u>	<u>Payment order</u> Document/message containing information needed to initiate the payment. It may cover the financial settlement for one or more commercial trade transactions. A payment order is an instruction to the ordered bank to arrange for the payment of one specified amount to the beneficiary.
<u>451</u>	<u>Extended payment order</u> Document/message containing information needed to initiate the payment. It may cover the financial settlement for several commercial trade transactions, which it is possible to specify in a special payments detail part. It is an instruction to the ordered bank to arrange for the payment of one specified amount to the beneficiary.
<u>452</u>	<u>Multiple payment order</u> Document/message containing a payment order to debit one or more accounts and to credit one or more beneficiaries.
<u>453</u>	<u>Notice that circumstances prevent payment of delivered goods</u> Message used to inform a supplier that delivered goods cannot be paid due to circumstances which prevent payment.
<u>454</u>	<u>Credit advice</u> Document/message sent by an account servicing institution to one of its account owners, to inform the account owner of an entry which has been or will be credited to its account for a specified amount on the date indicated.

455	<u>Extended credit advice</u> Document/message sent by an account servicing institution to one of its account owners, to inform the account owner of an entry that has been or will be credited to its account for a specified amount on the date indicated. It provides extended commercial information concerning the relevant remittance advice.
456	<u>Debit advice</u> Advice on a debit.
457	<u>Reversal of debit</u> Reversal of debit accounting entry by bank.
458	<u>Reversal of credit</u> Reversal of credit accounting entry by bank.
459	<u>Travel ticket</u> The document is a ticket giving access to a travel service.
460	<u>Documentary credit application</u> Document/message whereby a bank is requested to issue a documentary credit on the conditions specified therein.
461	<u>Payment card</u> The document is a credit, guarantee or charge card.
462	<u>Ready for transshipment despatch advice</u> Document to advise that the goods ordered are ready for transshipment.
463	<u>Pre-packed cross docking despatch advice</u> Document by means of which the supplier or consignor informs the buyer, consignee or distribution centre about the despatch of products packed according to the final delivery point requirements which will be moved across a dock in a distribution centre without further handling.
464	<u>Intermediate handling cross docking despatch advice</u> Document by means of which the supplier or consignor informs the buyer, consignee or the distribution centre about the despatch of products which will be moved across a dock, de-consolidated and re-consolidated according to final delivery location requirements.
465	<u>Documentary credit</u> Document/message in which a bank states that it has issued a documentary credit under which the beneficiary is to obtain payment, acceptance or negotiation on compliance with certain terms and conditions and against presentation of stipulated documents and such drafts as may be specified. The credit may or may not be confirmed by another bank.
466	<u>Documentary credit notification</u> Document/message issued by an advising bank in order to transmit a documentary credit to a beneficiary, or to another advising bank.
467	<u>Documentary credit transfer advice</u> Document/message whereby a bank advises that (part of) a documentary credit is being or has been transferred in favour of a second beneficiary.
468	<u>Documentary credit amendment notification</u> Document/message whereby a bank advises that the terms and conditions of a documentary credit have been amended.
469	<u>Documentary credit amendment</u> Document/message whereby a bank notifies a beneficiary of the details of an amendment to the terms and conditions of a documentary credit.
470	<u>Waste disposal report</u> Document/message sent by a shipping agent to an authority for reporting information on waste disposal.
481	<u>Remittance advice</u> Document/message advising of the remittance of payment.

610	<u>Forwarding instructions</u> Document/message issued to a freight forwarder, giving instructions regarding the action to be taken by the forwarder for the forwarding of goods described therein.
621	<u>Forwarder's advice to import agent</u> Document/message issued by a freight forwarder in an exporting country advising his counterpart in an importing country about the forwarding of goods described therein.
622	<u>Forwarder's advice to exporter</u> Document/message issued by a freight forwarder informing an exporter of the action taken in fulfillment of instructions received.
623	<u>Forwarder's invoice</u> Invoice issued by a freight forwarder specifying services rendered and costs incurred and claiming payment therefore.
624	<u>Forwarder's certificate of receipt</u> Non-negotiable document issued by a forwarder to certify that he has assumed control of a specified consignment, with irrevocable instructions to send it to the consignee indicated in the document or to hold it at his disposal. E.g. FIATA-FCR.
630	<u>Shipping note</u> (1123) Document/message provided by the shipper or his agent to the carrier, multimodal transport operator, terminal or other receiving authority, giving information about export consignments offered for transport, and providing for the necessary receipts and declarations of liability. Sometimes a multipurpose cargo handling document also fulfilling the functions of document 632, 633, 650 and 655.
631	<u>Forwarder's warehouse receipt</u> Document/message issued by a forwarder acting as Warehouse Keeper acknowledging receipt of goods placed in a warehouse, and stating or referring to the conditions which govern the warehousing and the release of goods. The document contains detailed provisions regarding the rights of holders-by-endorsement, transfer of ownership, etc. E.g. FIATA-FWR.
632	<u>Goods receipt</u> Document/message to acknowledge the receipt of goods and in addition may indicate receiving conditions.
633	<u>Port charges documents</u> Documents/messages specifying services rendered, storage and handling costs, demurrage and other charges due to the owner of goods described therein.
635	<u>Warehouse warrant</u> Negotiable receipt document, issued by a Warehouse Keeper to a person placing goods in a warehouse and conferring title to the goods stored.
640	<u>Delivery order</u> Document/message issued by a party entitled to authorize the release of goods specified therein to a named consignee, to be retained by the custodian of the goods.
650	<u>Handling order</u> Document/message issued by a cargo handling organization (port administration, terminal operator, etc.) for the removal or other handling of goods under their care.
655	<u>Gate pass</u> Document/message authorizing goods specified therein to be brought out of a fenced-in port or terminal area.
700	<u>Waybill</u> Non-negotiable document evidencing the contract for the transport of cargo.

Formatted Table

Formatted: Right: 0 cm

<b>CL06</b>	<b>Document name code</b> <b>Code specifying the document name.</b> <b>UN Edifact codes TDID 1001</b>
701	<u>Universal (multipurpose) transport document</u> Document/message evidencing a contract of carriage covering the movement of goods by any mode of transport, or combination of modes, for national as well as international transport, under any applicable international convention or national law and under the conditions of carriage of any carrier or transport operator undertaking or arranging the transport referred to in the document.
702	<u>Goods receipt, carriage</u> Document/message issued by a carrier or a carrier's agent, acknowledging receipt for carriage of goods specified therein on conditions stated or referred to in the document, enabling the carrier to issue a transport document.
703	<u>House waybill</u> The document made out by an agent/consolidator which evidences the contract between the shipper and the agent/consolidator for the arrangement of carriage of goods.
704	<u>Master bill of lading</u> A bill of lading issued by the master of a vessel (in actuality the owner or charterer of the vessel). It could cover a number of house bills.
705	<u>Bill of lading</u> Negotiable document/message which evidences a contract of carriage by sea and the taking over or loading of goods by carrier, and by which carrier undertakes to deliver goods against surrender of the document. A provision in the document that goods are to be delivered to the order of a named person, or to order, or to bearer, constitutes such an undertaking.
706	<u>Bill of lading original</u> The original of the bill of lading issued by a transport company. When issued by the maritime industry it could signify ownership of the cargo.
707	<u>Bill of lading copy</u> A copy of the bill of lading issued by a transport company.
708	<u>Empty container bill</u> Bill of lading indicating an empty container.
709	<u>Tanker bill of lading</u> Document which evidences a transport of liquid bulk cargo.
710	<u>Sea waybill</u> Non-negotiable document which evidences a contract for the carriage of goods by sea and the taking over of the goods by the carrier, and by which the carrier undertakes to deliver the goods to the consignee named in the document.
711	<u>Inland waterway bill of lading</u> Negotiable transport document made out to a named person, to order or to bearer, signed by the carrier and handed to the sender after receipt of the goods.
712	<u>Non-negotiable maritime transport document (generic)</u> Non-negotiable document which evidences a contract for the carriage of goods by sea and the taking over or loading of the goods by the carrier, and by which the carrier undertakes to deliver the goods to the consignee named in the document. E.g. Sea waybill. Remark: Synonymous with "straight" or "non-negotiable Bill of lading" used in certain countries, e.g. Canada.
713	<u>Mate's receipt</u> Document/message issued by a ship's officer to acknowledge that a specified consignment has been received on board a vessel, and the apparent condition of the goods; enabling the carrier to issue a Bill of lading.
714	<u>House bill of lading</u> The bill of lading issued not by the carrier but by the freight forwarder/consolidator known by the carrier.

Formatted Table

Formatted: Right: 0 cm

Formatted: Font: Bold

<b>CL06</b>	<b>Document name code</b> <b>Code specifying the document name.</b> <b>UN Edifact codes TDID 1001</b>
715	<u>Letter of indemnity for non-surrender of bill of lading</u> Document/message issued by a commercial party or a bank of an insurance company accepting responsibility to the beneficiary of the indemnity in accordance with the terms thereof.
716	<u>Forwarder's bill of lading</u> Non-negotiable document issued by a freight forwarder evidencing a contract for the carriage of goods by sea and the taking over or loading of the goods by the freight forwarder, and by which the freight forwarder undertakes to deliver the goods to the consignee named in the document.
720	<u>Rail consignment note (generic term)</u> Transport document constituting a contract for the carriage of goods between the sender and the carrier (the railway). For international rail traffic, this document must conform to the model prescribed by the international conventions concerning carriage of goods by rail, e.g. CIM Convention, SMGS Convention.
722	<u>Road list-SMGS</u> Accounting document, one copy of which is drawn up for each consignment note; it accompanies the consignment over the whole route and is a rail transport document.
723	<u>Escort official recognition</u> Document/message which gives right to the owner to exert all functions normally transferred to a guard in a train by which an escorted consignment is transported.
724	<u>Recharging document</u> Fictitious transport document regarding a previous transport, enabling a carrier's agent to give to another carrier's agent (in a different country) the possibility to collect charges relating to the original transport (rail environment).
730	<u>Road consignment note</u> Transport document/message which evidences a contract between a carrier and a sender for the carriage of goods by road (generic term). Remark: For international road traffic, this document must contain at least the particulars prescribed by the convention on the contract for the international carriage of goods by road (CMR).
740	<u>Air waybill</u> Document/message made out by or on behalf of the shipper which evidences the contract between the shipper and carrier(s) for carriage of goods over routes of the carrier(s) and which is identified by the airline prefix issuing the document plus a serial (IATA).
741	<u>Master air waybill</u> Document/message made out by or on behalf of the agent/consolidator which evidences the contract between the agent/consolidator and carrier(s) for carriage of goods over routes of the carrier(s) for a consignment consisting of goods originated by more than one shipper (IATA).
743	<u>Substitute air waybill</u> A temporary air waybill which contains only limited information because of the absence of the original.
744	<u>Crew's effects declaration</u> Declaration to Customs regarding the personal effects of crew members aboard the conveyance; equivalent to IMO FAL 4.
745	<u>Passenger list</u> Declaration to Customs regarding passengers aboard the conveyance; equivalent to IMO FAL 6.

Formatted Table

<b>CL06</b>	Document name code Code specifying the document name. UN Edifact codes TDID 1001
<u>746</u>	<u>Delivery notice (rail transport)</u> Document/message created by the consignor or by the departure station, joined to the transport or sent to the consignee, giving the possibility to the consignee or the arrival station to attest the delivery of the goods. The document must be returned to the consignor or to the departure station.
<u>750</u>	<u>Despatch note (post parcels)</u> Document/message which, according to Article 106 of the "Agreement concerning Postal Parcels" under the UPU convention, is to accompany post parcels.
<u>760</u>	<u>Multimodal/combined transport document (generic)</u> A transport document used when more than one mode of transportation is involved in the movement of cargo. It is a contract of carriage and receipt of the cargo for a multimodal transport. It indicates the place where the responsible transport company in the move takes responsibility for the cargo, the place where the responsibility of this transport company in the move ends and the conveyances involved.
<u>761</u>	<u>Through bill of lading</u> Bill of lading which evidences a contract of carriage from one place to another in separate stages of which at least one stage is a sea transit, and by which the issuing carrier accepts responsibility for the carriage as set forth in the through bill of lading.
<u>763</u>	<u>Forwarder's certificate of transport</u> Negotiable document/message issued by a forwarder to certify that he has taken charge of a specified consignment for despatch and delivery in accordance with the consignor's instructions, as indicated in the document, and that he accepts responsibility for delivery of the goods to the holder of the document through the intermediary of a delivery agent of his choice. E.g. FIATA-FCT.
<u>764</u>	<u>Combined transport document (generic)</u> Negotiable or non-negotiable document evidencing a contract for the performance and/or procurement of performance of combined transport of goods and bearing on its face either the heading "Negotiable combined transport document issued subject to Uniform Rules for a Combined Transport Document (ICC Brochure No. 298)" or the heading "Non-negotiable Combined Transport Document issued subject to Uniform Rules for a Combined Transport Document (ICC Brochure No. 298)".
<u>765</u>	<u>Multimodal transport document (generic)</u> Document/message which evidences a multimodal transport contract, the taking in charge of the goods by the multimodal transport operator, and an undertaking by him to deliver the goods in accordance with the terms of the contract. (International Convention on Multimodal Transport of Goods).
<u>766</u>	<u>Combined transport bill of lading/multimodal bill of lading</u> Document which evidences a multimodal transport contract, the taking in charge of the goods by the multimodal transport operator, and an undertaking by him to deliver the goods in accordance with the terms of the contract.
<u>770</u>	<u>Booking confirmation</u> Document/message issued by a carrier to confirm that space has been reserved for a consignment in means of transport.
<u>775</u>	<u>Calling forward notice</u> Instructions for release or delivery of goods.
<u>780</u>	<u>Freight invoice</u> Document/message issued by a transport operation specifying freight costs and charges incurred for a transport operation and stating conditions of payment.

Formatted Table

Formatted: Right: 0 cm

Formatted: Font: Bold

<b>CL06</b>	<b>Document name code</b> <b>Code specifying the document name.</b> <b>UN Edifact codes TDID 1001</b>
781	<u>Arrival notice (goods)</u> Notification from the carrier to the consignee in writing, by telephone or by any other means (express letter, message, telegram, etc.) informing him that a consignment addressed to him is being or will shortly be held at his disposal at a specified point in the place of destination.
782	<u>Notice of circumstances preventing delivery (goods)</u> Request made by the carrier to the sender, or, as the case may be, the consignee, for instructions as to the disposal of the consignment when circumstances prevent delivery and the return of the goods has not been requested by the consignor in the transport document.
783	<u>Notice of circumstances preventing transport (goods)</u> Request made by the carrier to the sender, or, the consignee as the case may be, for instructions as to the disposal of the goods when circumstances prevent transport before departure or en route, after acceptance of the consignment concerned.
784	<u>Delivery notice (goods)</u> Notification in writing, sent by the carrier to the sender, to inform him at his request of the actual date of delivery of the goods.
785	<u>Cargo manifest</u> Listing of goods comprising the cargo carried in a means of transport or in a transport-unit. The cargo manifest gives the commercial particulars of the goods, such as transport document numbers, consignors, consignees, shipping marks, number and kind of packages and descriptions and quantities of the goods.
786	<u>Freight manifest</u> Document/message containing the same information as a cargo manifest, and additional details on freight amounts, charges, etc.
787	<u>Bordereau</u> Document/message used in road transport, listing the cargo carried on a road vehicle, often referring to appended copies of Road consignment note.
788	<u>Container manifest (unit packing list)</u> Document/message specifying the contents of particular freight containers or other transport units, prepared by the party responsible for their loading into the container or unit.
789	<u>Charges note</u> Document used by the rail organization to indicate freight charges or additional charges in each case where the departure station is not able to calculate the charges for the total voyage (e.g. tariff not yet updated, part of voyage not covered by the tariff). This document must be considered as joined to the transport.
790	<u>Advice of collection</u> (1030) Document that is joined to the transport or sent by separate means, giving to the departure rail organization the proof that the cash-on delivery amount has been encashed by the arrival rail organization before reimbursement of the consignor.
791	<u>Safety of ship certificate</u> Document certifying a ship's safety to a specified date.
792	<u>Safety of radio certificate</u> Document certifying the safety of a ship's radio facilities to a specified date.
793	<u>Safety of equipment certificate</u> Document certifying the safety of a ship's equipment to a specified date.
794	<u>Civil liability for oil certificate</u> Document declaring a ship owner's liability for oil propelling or carried on a vessel.

<b>CL06</b>	<b>Document name code</b> <b>Code specifying the document name.</b> <b>UN Edifact codes TDID 1001</b>
795	<u>Loadline document</u> Document specifying the limit of a ship's legal submersion under various conditions.
796	<u>Derat document</u> Document certifying that a ship is free of rats, valid to a specified date.
797	<u>Maritime declaration of health</u> Document certifying the health condition on board a vessel, valid to a specified date.
798	<u>Certificate of registry</u> Official certificate stating the vessel's registry.
799	<u>Ship's stores declaration</u> Declaration to Customs regarding the contents of the ship's stores (equivalent to IMO FAL 3) i.e. goods intended for consumption by passengers/crew on board vessels, aircraft or trains, whether or not sold or landed; goods necessary for operation/maintenance of conveyance, including fuel/lubricants, excluding spare parts/equipment (IMO).
810	<u>Export licence, application for</u> Application for a permit issued by a government authority permitting exportation of a specified commodity subject to specified conditions as quantity, country of destination, etc.
811	<u>Export licence</u> Permit issued by a government authority permitting exportation of a specified commodity subject to specified conditions as quantity, country of destination, etc. <b>Synonym: Embargo permit.</b>
812	<u>Exchange control declaration, export</u> Document/message completed by an exporter/seller as a means whereby the competent body may control that the amount of foreign exchange accrued from a trade transaction is repatriated in accordance with the conditions of payment and exchange control regulations in force.
820	<u>Despatch note model T</u> European community transit declaration.
821	<u>Despatch note model T1</u> Transit declaration for goods circulating under internal community transit procedures (between European Union (EU) countries).
822	<u>Despatch note model T2</u> Ascertainment that the declared goods were originally produced in an European Union (EU) country.
823	<u>Control document T5</u> Control document (export declaration) used particularly in case of re-sending without use with only VAT collection, refusal, unconformity with contract etc.
824	<u>Re-sending consignment note</u> Rail consignment note prepared by the consignor for the facilitation of an eventual return to the origin of the goods.
825	<u>Despatch note model T2L</u> Ascertainment that the declared goods were originally produced in an European Union (EU) country. May only be used for goods that are loaded on one single means of transport in one single departure point for one single delivery point.
830	<u>Goods declaration for exportation</u> Document/message by which goods are declared for export Customs clearance, conforming to the layout key set out at Appendix I to Annex C.1 concerning outright exportation to the Kyoto convention (CCC). Within a Customs union, "for despatch" may have the same meaning as "for exportation".

<u>CL06</u>	<u>Document name code</u> <u>Code specifying the document name.</u> <u>UN Edifact codes TDID 1001</u>
833	<u>Cargo declaration (departure)</u> <u>Generic term, sometimes referred to as Freight declaration, applied to the documents providing the particulars required by the Customs concerning the cargo (freight) carried by commercial means of transport (CCC).</u>
840	<u>Application for goods control certificate</u> <u>Document/message submitted to a competent body by party requesting a Goods control certificate to be issued in accordance with national or international standards, or conforming to legislation in the importing country, or as specified in the contract.</u>
841	<u>Goods control certificate</u> <u>Document/message issued by a competent body evidencing the quality of the goods described therein, in accordance with national or international standards, or conforming to legislation in the importing country, or as specified in the contract.</u>
850	<u>Application for phytosanitary certificate</u> <u>Document/message submitted to a competent body by party requesting a Phytosanitary certificate to be issued.</u>
851	<u>Phytosanitary certificate</u> <u>Document/message issued by the competent body in the exporting country evidencing that plants, fruit, or vegetables are free from disease and fit for consumption and giving details on fumigation or other treatment to which they may have been subjected.</u>
852	<u>Sanitary certificate</u> <u>Document/message issued by the competent authority in the exporting country evidencing that alimentary and animal products, including dead animals, are fit for human consumption, and giving details, when relevant, of controls undertaken.</u>
853	<u>Veterinary certificate</u> <u>Document/message issued by the competent authority in the exporting country evidencing that live animals or birds are not infested or infected with disease, and giving details regarding their provenance, and of vaccinations and other treatment to which they have been subjected.</u>
855	<u>Application for inspection certificate</u> <u>Document/message submitted to a competent body by a party requesting an Inspection certificate to be issued in accordance with national or international standards, or conforming to legislation in the country in which it is required, or as specified in the contract.</u>
856	<u>Inspection certificate</u> <u>Document/message issued by a competent body evidencing that the goods described therein have been inspected in accordance with national or international standards, in conformity with legislation in the country in which the inspection is required, or as specified in the contract.</u>
860	<u>Certificate of origin, application for</u> <u>Document/message submitted to a competent body by an interested party requesting a Certificate of origin to be issued in accordance with relevant criteria, and on the basis of evidence of the origin of the goods.</u>
861	<u>Certificate of origin</u> <u>Document/message identifying goods, in which the authority or body authorized to issue it certifies expressly that the goods to which the certificate relates originate in a specific country. The word "country" may include a group of countries, a region or a part of a country. This certificate may also include a declaration by the manufacturer, producer, supplier, exporter or other competent person.</u>

Formatted Table

<b>CL06</b>	<b>Document name code</b> <b>Code specifying the document name.</b> <b>UN Edifact codes TDID 1001</b>
862	<u>Declaration of origin</u> <u>Appropriate statement as to the origin of the goods, made in connection with their exportation by the manufacturer, producer, supplier, exporter or other competent person on the Commercial invoice or any other document relating to the goods (CCC).</u>
863	<u>Regional appellation certificate</u> <u>Certificate drawn up in accordance with the rules laid down by an authority or approved body, certifying that the goods described therein qualify for a designation specific to the given region (e.g. champagne, port wine, Parmesan cheese).</u>
864	<u>Preference certificate of origin</u> <u>Document/message describing a certificate of origin meeting the requirements for preferential treatment.</u>
865	<u>Certificate of origin form GSP</u> <u>Specific form of certificate of origin for goods qualifying for preferential treatment under the generalized system of preferences (includes a combined declaration of origin and certificate, form A).</u>
870	<u>Consular invoice</u> <u>Document/message to be prepared by an exporter in his country and presented to a diplomatic representation of the importing country for endorsement and subsequently to be presented by the importer in connection with the import of the goods described therein.</u>
890	<u>Dangerous goods declaration</u> <u>(1115) Document/message issued by a consignor in accordance with applicable conventions or regulations, describing hazardous goods or materials for transport purposes, and stating that the latter have been packed and labelled in accordance with the provisions of the relevant conventions or regulations.</u>
895	<u>Statistical document, export</u> <u>Document/message in which an exporter provides information about exported goods required by the body responsible for the collection of international trade statistics.</u>
896	<u>INTRASTAT declaration</u> <u>Document/message in which a declarant provides information about goods required by the body responsible for the collection of trade statistics.</u>
901	<u>Delivery verification certificate</u> <u>Document/message whereby an official authority (Customs or governmental) certifies that goods have been delivered.</u>
910	<u>Import licence, application for</u> <u>Document/message in which an interested party applies to the competent body for authorization to import either a limited quantity of articles subject to import restrictions, or an unlimited quantity of such articles during a limited period, and specifies the kind of articles, their origin and value, etc.</u>
911	<u>Import licence</u> <u>Document/message issued by the competent body in accordance with import regulations in force, by which authorization is granted to a named party to import either a limited quantity of designated articles or an unlimited quantity of such articles during a limited period, under conditions specified in the document.</u>
913	<u>Customs declaration without commercial detail</u> <u>CUSDEC transmission that does not include data from the commercial detail section of the message.</u>
914	<u>Customs declaration with commercial and item detail</u> <u>CUSDEC transmission that includes data from both the commercial detail and item detail sections of the message.</u>

Formatted Table

915	<u>Customs declaration without item detail</u> <u>CUSDEC transmission that does not include data from the item detail section of the message.</u>
916	<u>Related document</u> <u>Document that has a relationship with the stated document/message.</u>
917	<u>Receipt (Customs)</u> <u>Receipt for Customs duty/tax/fee paid.</u>
925	<u>Application for exchange allocation</u> <u>Document/message whereby an importer/buyer requests the competent body to allocate an amount of foreign exchange to be transferred to an exporter/seller in payment for goods.</u>
926	<u>Foreign exchange permit</u> <u>Document/message issued by the competent body authorizing an importer/buyer to transfer an amount of foreign exchange to an exporter/seller in payment for goods.</u>
927	<u>Exchange control declaration (import)</u> <u>Document/message completed by an importer/buyer as a means for the competent body to control that a trade transaction for which foreign exchange has been allocated has been executed and that money has been transferred in accordance with the conditions of payment and the exchange control regulations in force.</u>
929	<u>Goods declaration for importation</u> <u>Document/message by which goods are declared for import Customs clearance [sister entry of 830].</u>
930	<u>Goods declaration for home use</u> <u>Document/message by which goods are declared for import Customs clearance according to Annex B.1 (concerning clearance for home use) to the Kyoto convention (CCC).</u>
931	<u>Customs immediate release declaration</u> <u>Document/message issued by an importer notifying Customs that goods have been removed from an importing means of transport to the importer's premises under a Customs-approved arrangement for immediate release, or requesting authorization to do so.</u>
932	<u>Customs delivery note</u> <u>Document/message whereby a Customs authority releases goods under its control to be placed at the disposal of the party concerned. Synonym: Customs release note.</u>
933	<u>Cargo declaration (arrival)</u> <u>Generic term, sometimes referred to as Freight declaration, applied to the documents providing the particulars required by the Customs concerning the cargo (freight) carried by commercial means of transport (CCC).</u>
934	<u>Value declaration</u> <u>Document/message in which a declarant (importer) states the invoice or other price (e.g. selling price, price of identical goods), and specifies costs for freight, insurance and packing, etc., terms of delivery and payment, any relationship with the trading partner, etc., for the purpose of determining the Customs value of goods imported.</u>
935	<u>Customs invoice</u> <u>Document/message required by the Customs in an importing country in which an exporter states the invoice or other price (e.g. selling price, price of identical goods), and specifies costs for freight, insurance and packing, etc., terms of delivery and payment, for the purpose of determining the Customs value in the importing country of goods consigned to that country.</u>

<b>CL06</b>	<b>Document name code</b> <b>Code specifying the document name.</b> <b>UN Edifact codes TDID 1001</b>
936	<u>Customs declaration (post parcels)</u> Document/message which, according to Article 106 of the "Agreement concerning Postal Parcels" under the UPU Convention, must accompany post parcels and in which the contents of such parcels are specified.
937	<u>Tax declaration (value added tax)</u> Document/message in which an importer states the pertinent information required by the competent body for assessment of value-added tax.
938	<u>Tax declaration (general)</u> Document/message containing a general tax declaration.
940	<u>Tax demand</u> Document/message containing the demand of tax.
941	<u>Embargo permit</u> Document/message giving the permission to export specified goods.
950	<u>Goods declaration for Customs transit</u> Document/message by which the sender declares goods for Customs transit according to Annex E.1 (concerning Customs transit) to the Kyoto convention (CCC).
951	<u>TIF form</u> International Customs transit document by which the sender declares goods for carriage by rail in accordance with the provisions of the 1952 International Convention to facilitate the crossing of frontiers for goods carried by rail (TIF Convention of UIC).
952	<u>TIR carnet</u> International Customs document (International Transit by Road), issued by a guaranteeing association approved by the Customs authorities, under the cover of which goods are carried, in most cases under Customs seal, in road vehicles and/or containers in compliance with the requirements of the Customs TIR Convention of the International Transport of Goods under cover of TIR Carnets (UN/ECE).
953	<u>EC carnet</u> EC customs transit document issued by EC customs authorities for transit and/or temporary user of goods within the EC.
954	<u>EUR 1 certificate of origin</u> Customs certificate used in preferential goods interchanges between EC countries and EC external countries.
955	<u>ATA carnet</u> International Customs document (Admission Temporaire / Temporary Admission) which, issued under the terms of the ATA Convention (1961), incorporates an internationally valid guarantee and may be used, in lieu of national Customs documents and as security for import duties and taxes, to cover the temporary admission of goods and, where appropriate, the transit of goods. If accepted for controlling the temporary export and reimport of goods, international guarantee does not apply (CCC).
960	<u>Single administrative document</u> A set of documents, replacing the various (national) forms for Customs declaration within the EC, implemented on 01-01-1988.
961	<u>General response (Customs)</u> General response message to permit the transfer of data from Customs to the transmitter of the previous message.
962	<u>Document response (Customs)</u> Document response message to permit the transfer of data from Customs to the transmitter of the previous message.
963	<u>Error response (Customs)</u> Error response message to permit the transfer of data from Customs to the transmitter of the previous message.

<b>CL06</b>	<b>Document name code</b> <b>Code specifying the document name.</b> <b>UN Edifact codes TDID 1001</b>
964	<b>Package response (Customs)</b> Package response message to permit the transfer of data from Customs to the transmitter of the previous message.
965	<b>Tax calculation/confirmation response (Customs)</b> Tax calculation/confirmation response message to permit the transfer of data from Customs to the transmitter of the previous message.
966	<b>Quota prior allocation certificate</b> Document/message issued by the competent body for prior allocation of a quota.
970	<b>Wagon report</b> Document which contains consignment information concerning the wagons and their lading in a case of a multiple wagon consignment.
971	<b>Transit Conveyor Document</b> Document for a course of transit used for a carrier who is neither the carrier at the beginning nor the arrival. The transit carrier can directly invoice the expenses for its part of the transport.
972	<b>Rail consignment note forwarder copy</b> Document which is a copy of the rail consignment note printed especially for the need of the forwarder.
974	<b>Duty suspended goods</b> Document giving details for the carriage of excisable goods on a duty-suspended basis.
975	<b>Proof of transit declaration</b> A document providing proof that a transit declaration has been accepted.
976	<b>Container transfer note</b> Document for the carriage of containers. Syn: transfer note.
977	<b>NATO transit document</b> Customs transit document for the carriage of shipments of the NATO armed forces under Customs supervision.
978	<b>Transfrontier waste shipment authorization</b> Document containing the authorization from the relevant authority for the international carriage of waste. Syn: Transfrontier waste shipment permit.
979	<b>Transfrontier waste shipment movement document</b> Document certified by the carriers and the consignee to be used for the international carriage of waste.
990	<b>End use authorization</b> Document issued by Customs granting the end-use Customs procedure.
991	<b>Government contract</b> Document/message describing a contract with a government authority.
995	<b>Statistical document, import</b> Document/message describing an import document that is used for statistical purposes.
996	<b>Application for documentary credit</b> Message with application for opening of a documentary credit.
998	<b>Previous Customs document/message</b> Indication of the previous Customs document/message concerning the same transaction.

Formatted Table

3.2.8.16 CL15 - International TIR database3.2.8.17 CL16 - Message function code

CL16	Message function code
Code indicating the function of the message.	
1	<u>Cancellation</u> Message cancelling a previous transmission for a given transaction.
2	<u>Addition</u> Message containing items to be added.
3	<u>Deletion</u> Message containing items to be deleted.
4	<u>Change</u> Message containing items to be changed.
5	<u>Replace</u> Message replacing a previous message.
6	<u>Confirmation</u> Message confirming the details of a previous transmission where such confirmation is required or recommended under the terms of a trading partner agreement.
7	<u>Duplicate</u> The message is a duplicate of a previously generated message.
8	<u>Status</u> Code indicating that the referenced message is a status.
9	<u>Original</u> Initial transmission related to a given transaction.
10	<u>Not found</u> Message whose reference number is not filed.
11	<u>Response</u> Message responding to a previous message or document.
12	<u>Not processed</u> Message indicating that the referenced message was received but not yet processed.
13	<u>Request</u> Code indicating that the referenced message is a request.
14	<u>Advance notification</u> Code indicating that the information contained in the message is an advance notification of information to follow.
15	<u>Reminder</u> Repeated message transmission for reminding purposes.
16	<u>Proposal</u> Message content is a proposal.
17	<u>Cancel, to be reissued</u> Referenced transaction cancelled, reissued message will follow.
18	<u>Reissue</u> New issue of a previous message (maybe cancelled).
19	<u>Seller initiated change</u> Change information submitted by buyer but initiated by seller.
20	<u>Replace heading section only</u> Message to replace the heading of a previous message.

Formatted Table

<b>CL16</b>	<b>Message function code</b> <b>Code indicating the function of the message.</b>
<u>21</u>	<u>Replace item detail and summary only</u> <u>Message to replace item detail and summary of a previous message.</u>
<u>22</u>	<u>Final transmission</u> <u>Final message in a related series of messages together making up a commercial, administrative or transport transaction.</u>
<u>23</u>	<u>Transaction on hold</u> <u>Message not to be processed until further release information.</u>
<u>24</u>	<u>Delivery instruction</u> <u>Delivery schedule message only used to transmit short-term delivery instructions.</u>
<u>25</u>	<u>Forecast</u> <u>Delivery schedule message only used to transmit long-term schedule information.</u>
<u>26</u>	<u>Delivery instruction and forecast</u> <u>Combination of codes '24' and '25'.</u>
<u>27</u>	<u>Not accepted</u> <u>Message to inform that the referenced message is not accepted by the recipient.</u>
<u>28</u>	<u>Accepted, with amendment in heading section</u> <u>Message accepted but amended in heading section.</u>
<u>29</u>	<u>Accepted without amendment</u> <u>Referenced message is entirely accepted.</u>
<u>30</u>	<u>Accepted, with amendment in detail section</u> <u>Referenced message is accepted but amended in detail section.</u>
<u>31</u>	<u>Copy</u> <u>Indicates that the message is a copy of an original message that has been sent, e.g. for action or information.</u>
<u>32</u>	<u>Approval</u> <u>A message releasing an existing referenced message for action to the receiver.</u>
<u>33</u>	<u>Change in heading section</u> <u>Message changing the referenced message heading section.</u>
<u>34</u>	<u>Accepted with amendment</u> <u>The referenced message is accepted but amended.</u>
<u>35</u>	<u>Retransmission</u> <u>Change-free transmission of a message previously sent.</u>
<u>36</u>	<u>Change in detail section</u> <u>Message changing referenced detail section.</u>
<u>37</u>	<u>Reversal of a debit</u> <u>Reversal of a previously posted debit.</u>
<u>38</u>	<u>Reversal of a credit</u> <u>Reversal of a previously posted credit.</u>
<u>39</u>	<u>Reversal for cancellation</u> <u>Code indicating that the referenced message is reversing a cancellation of a previous transmission for a given transaction.</u>
<u>40</u>	<u>Request for deletion</u> <u>The message is given to inform the recipient to delete the referenced transaction.</u>
<u>41</u>	<u>Finishing/closing order</u> <u>Last of series of call-offs.</u>
<u>42</u>	<u>Confirmation via specific means</u> <u>Message confirming a transaction previously agreed via other means (e.g. phone).</u>
<u>43</u>	<u>Additional transmission</u> <u>Message already transmitted via another communication channel. This transmission is to provide electronically processable data only.</u>

Formatted Table

Formatted: Font: Bold

<b>CL16</b>	<b>Message function code</b> <b>Code indicating the function of the message.</b>
44	<u>Accepted without reserves</u> <u>Message accepted without reserves.</u>
45	<u>Accepted with reserves</u> <u>Message accepted with reserves.</u>
46	<u>Provisional</u> <u>Message content is provisional.</u>
47	<u>Definitive</u> <u>Message content is definitive.</u>
48	<u>Accepted, contents rejected</u> <u>Message to inform that the previous message is received, but it cannot be processed due to regulations, laws, etc.</u>
49	<u>Settled dispute</u> <u>The reported dispute is settled.</u>
50	<u>Withdraw</u> <u>Message withdrawing a previously approved message.</u>
51	<u>Authorisation</u> <u>Message authorising a message or transaction(s).</u>
52	<u>Proposed amendment</u> <u>A code used to indicate an amendment suggested by the sender.</u>
53	<u>Test</u> <u>Code indicating the message is to be considered as a test.</u>
54	<u>Extract</u> <u>A subset of the original.</u>
55	<u>Notification only</u> <u>The receiver may use the notification information for analysis only.</u>
56	<u>Advice of ledger booked items</u> <u>An advice that items have been booked in the ledger.</u>
57	<u>Advice of items pending to be booked in the ledger</u> <u>An advice that items are pending to be booked in the ledger.</u>
58	<u>Pre-advice of items requiring further information</u> <u>A pre-advice that items require further information.</u>
59	<u>Pre-advised items</u> <u>A pre-advice of items.</u>
60	<u>No action since last message</u> <u>Code indicating the fact that no action has taken place since the last message.</u>
61	<u>Complete schedule</u> <u>The message function is a complete schedule.</u>
62	<u>Update schedule</u> <u>The message function is an update to a schedule.</u>
63	<u>Not accepted, provisional</u> <u>Not accepted, subject to confirmation.</u>
64	<u>Verification</u> <u>The message is transmitted to verify information.</u>
65	<u>Unsettled dispute</u> <u>To report an unsettled dispute.</u>

3.2.8.22 *CL21 - Measurement unit code*

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>05</u>	<u>lift</u>
<u>06</u>	<u>small spray</u>
<u>08</u>	<u>heat lot</u>
<u>10</u>	<u>group</u> <u>A unit of count defining the number of groups (group: set of items classified together).</u>
<u>11</u>	<u>outfit</u> <u>A unit of count defining the number of outfits (outfit: a complete set of equipment / materials / objects used for a specific purpose).</u>

Formatted Table

Formatted: Font: Bold

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
13	<u>ration</u> <u>A unit of count defining the number of rations (ration: a single portion of provisions).</u>
14	<u>shot</u> <u>A unit of liquid measure, especially related to spirits.</u>
15	<u>stick, military</u> <u>A unit of count defining the number of military sticks (military stick: bombs or paratroops released in rapid succession from an aircraft).</u>
16	<u>hundred fifteen kg drum</u>
17	<u>hundred lb drum</u>
18	<u>fiftyfive gallon (US) drum</u>
19	<u>tank truck</u>
20	<u>twenty foot container</u> <u>A unit of count defining the number of shipping containers that measure 20 feet in length.</u>
21	<u>forty foot container</u> <u>A unit of count defining the number of shipping containers that measure 40 feet in length.</u>
22	<u>decilitre per gram</u>
23	<u>gram per cubic centimetre</u>
24	<u>theoretical pound</u> <u>A unit of mass defining the expected mass of material expressed as the number of pounds.</u>
25	<u>gram per square centimetre</u>
26	<u>actual ton</u>
27	<u>theoretical ton</u> <u>A unit of mass defining the expected mass of material, expressed as the number of tons.</u>
28	<u>kilogram per square metre</u>
29	<u>pound per thousand square feet</u>
30	<u>horse power day per air dry metric ton</u>
31	<u>catch weight</u>
32	<u>kilogram per air dry metric ton</u>
33	<u>kilopascal square metres per gram</u>
34	<u>kilopascals per millimetre</u>
35	<u>millilitres per square centimetre second</u>
36	<u>cubic feet per minute per square foot</u> <u>Conversion factor required</u>
37	<u>ounce per square foot</u>
38	<u>ounces per square foot per 0,01inch</u>
40	<u>millilitre per second</u>
41	<u>millilitre per minute</u>
43	<u>super bulk bag</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
44	<u>fivehundred kg bulk bag</u>
45	<u>threehundred kg bulk bag</u>
46	<u>fifty lb bulk bag</u>
47	<u>fifty lb bag</u>
48	<u>bulk car load</u>
53	<u>theoretical kilograms</u>
54	<u>theoretical tonne</u>
56	<u>sitas</u> <u>A unit of area for tin plate equal to a surface area of 100 square metres.</u>

Formatted Table

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>57</u>	<u>mesh</u> <u>A unit of count defining the number of strands per inch as a measure of the fineness of a woven product.</u>
<u>58</u>	<u>net kilogram</u> <u>A unit of mass defining the total number of kilograms after deductions.</u>
<u>59</u>	<u>part per million</u> <u>A unit of proportion equal to 10<sup>-6</sup>.</u>
<u>60</u>	<u>percent weight</u> <u>A unit of proportion equal to 10<sup>-2</sup>.</u>
<u>61</u>	<u>part per billion (US)</u> <u>A unit of proportion equal to 10<sup>-9</sup>.</u>
<u>62</u>	<u>percent per 1000 hour</u>
<u>63</u>	<u>failure rate in time</u>
<u>64</u>	<u>pound per square inch, gauge</u>
<u>66</u>	<u>oersted</u>
<u>69</u>	<u>test specific scale</u>
<u>71</u>	<u>volt ampere per pound</u>
<u>72</u>	<u>watt per pound</u>
<u>73</u>	<u>ampere turn per centimetre</u>
<u>74</u>	<u>millipascal</u>
<u>76</u>	<u>gauss</u>
<u>77</u>	<u>milli-inch</u>
<u>78</u>	<u>kilogauss</u>
<u>80</u>	<u>pound per square inch absolute</u>
<u>81</u>	<u>henry</u>
<u>84</u>	<u>kilopound per square inch</u> <u>A unit of pressure defining the number of kilopounds force per square inch.</u>
<u>85</u>	<u>foot pound-force</u>
<u>87</u>	<u>pound per cubic foot</u>
<u>89</u>	<u>poise</u>
<u>90</u>	<u>Saybold universal second</u>
<u>91</u>	<u>stokes</u>
<u>92</u>	<u>calorie per cubic centimetre</u>
<u>93</u>	<u>calorie per gram</u>
<u>94</u>	<u>curl unit</u>
<u>95</u>	<u>twenty thousand gallon (US) tankcar</u>
<u>96</u>	<u>ten thousand gallon (US) tankcar</u>
<u>97</u>	<u>ten kg drum</u>
<u>98</u>	<u>fifteen kg drum</u>
<u>1A</u>	<u>car mile</u>
<u>1B</u>	<u>car count</u>
<u>1C</u>	<u>locomotive count</u>
<u>1D</u>	<u>caboose count</u>
<u>1E</u>	<u>empty car</u>
<u>1F</u>	<u>train mile</u>
<u>1G</u>	<u>fuel usage gallon (US)</u>
<u>1H</u>	<u>caboose mile</u>
<u>1I</u>	<u>fixed rate</u> <u>A unit of quantity expressed as a predetermined or set rate for usage of a facility or service.</u>
<u>1J</u>	<u>ton mile</u>
<u>1K</u>	<u>locomotive mile</u>
<u>1L</u>	<u>total car count</u>
<u>1M</u>	<u>total car mile</u>
<u>1X</u>	<u>quarter mile</u>

<u>A41</u>	<u>ampere per square metre</u>
<u>A42</u>	<u>curie per kilogram</u>

Formatted Table

Formatted: Font: Bold

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>A43</u>	<u>deadweight tonnage</u> <u>A unit of mass defining the difference between the weight of a ship when completely empty and its weight when completely loaded, expressed as the number of tons.</u>
<u>A44</u>	<u>decalitre</u>
<u>A45</u>	<u>decametre</u>
<u>A47</u>	<u>decitex</u> <u>A unit of yarn density. One decitex equals a mass of 1 gram per 10 kilometres of length.</u>
<u>A48</u>	<u>degree Rankine</u> <u>Refer ISO 80000-5 (Quantities and units — Part 5: Thermodynamics)</u>
<u>A49</u>	<u>denier</u> <u>A unit of yarn density. One denier equals a mass of 1 gram per 9 kilometres of length.</u>
<u>A5</u>	<u>ampere square metre</u>
<u>A50</u>	<u>dyne second per cubic centimetre</u>
<u>A51</u>	<u>dyne second per centimetre</u>
<u>A52</u>	<u>dyne second per centimetre to the fifth power</u>
<u>A53</u>	<u>electronvolt</u>
<u>A54</u>	<u>electronvolt per metre</u>
<u>A55</u>	<u>electronvolt square metre</u>
<u>A56</u>	<u>electronvolt square metre per kilogram</u>
<u>A57</u>	<u>erg</u>
<u>A58</u>	<u>erg per centimetre</u>
<u>A59</u>	<u>8-part cloud cover</u> <u>A unit of count defining the number of eighth-parts as a measure of the celestial dome cloud coverage.</u> <u>Synonym: OKTA , OCTA</u>
<u>A6</u>	<u>ampere per square metre kelvin squared</u>
<u>A60</u>	<u>erg per cubic centimetre</u>
<u>A61</u>	<u>erg per gram</u>
<u>A62</u>	<u>erg per gram second</u>
<u>A63</u>	<u>erg per second</u>
<u>A64</u>	<u>erg per second square centimetre</u>
<u>A65</u>	<u>erg per square centimetre second</u>
<u>A66</u>	<u>erg square centimetre</u>
<u>A67</u>	<u>erg square centimetre per gram</u>
<u>A68</u>	<u>exajoule</u>
<u>A69</u>	<u>farad per metre</u>
<u>A7</u>	<u>ampere per square millimetre</u>
<u>A70</u>	<u>femtojoule</u>
<u>A71</u>	<u>femtometre</u>
<u>A73</u>	<u>foot per second squared</u>
<u>A74</u>	<u>foot pound-force per second</u>
<u>A75</u>	<u>freight ton</u> <u>A unit of information typically used for billing purposes, defined as either the number of metric tons or the number of cubic metres, whichever is the larger.</u>
<u>A76</u>	<u>gal</u>
<u>A77</u>	<u>Gaussian CGS unit of displacement</u>
<u>A78</u>	<u>Gaussian CGS unit of electric current</u>
<u>A79</u>	<u>Gaussian CGS unit of electric charge</u>
<u>A8</u>	<u>ampere second</u>
<u>A80</u>	<u>Gaussian CGS unit of electric field strength</u>
<u>A81</u>	<u>Gaussian CGS unit of electric polarization</u>
<u>A82</u>	<u>Gaussian CGS unit of electric potential</u>
<u>A83</u>	<u>Gaussian CGS unit of magnetization</u>

<u>A89</u>	<u>gigapascal</u>
<u>A9</u>	<u>rate</u> <u>A unit of quantity expressed as a rate for usage of a facility or service.</u>
<u>A90</u>	<u>gigawatt</u>
<u>A91</u>	<u>gon</u> <u>Synonym: grade</u>
<u>A93</u>	<u>gram per cubic metre</u>
<u>A94</u>	<u>gram per mole</u>
<u>A95</u>	<u>gray</u>
<u>A96</u>	<u>gray per second</u>
<u>A97</u>	<u>hectopascal</u>
<u>A98</u>	<u>henry per metre</u>
<u>A99</u>	<u>bit</u> <u>A unit of information equal to one binary digit.</u>
<u>AA</u>	<u>ball</u> <u>A unit of count defining the number of balls (ball: object formed in the shape of sphere).</u>
<u>AB</u>	<u>bulk pack</u> <u>A unit of count defining the number of items per bulk pack.</u>
<u>ACR</u>	<u>acre</u>
<u>ACT</u>	<u>activity</u> <u>A unit of count defining the number of activities (activity: a unit of work or action).</u>
<u>AD</u>	<u>byte</u> <u>A unit of information equal to 8 bits.</u>
<u>AE</u>	<u>ampere per metre</u>
<u>AH</u>	<u>additional minute</u> <u>A unit of time defining the number of minutes in addition to the referenced minutes.</u>
<u>AI</u>	<u>average minute per call</u> <u>A unit of count defining the number of minutes for the average interval of a call.</u>
<u>AJ</u>	<u>cop</u>
<u>AK</u>	<u>fathom</u>
<u>AL</u>	<u>access line</u> <u>A unit of count defining the number of telephone access lines.</u>
<u>AM</u>	<u>ampoule</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>AMH</u>	<u>ampere hour</u> <u>A unit of electric charge defining the amount of charge accumulated by a steady flow of one ampere for one hour.</u>
<u>AMP</u>	<u>ampere</u>
<u>ANN</u>	<u>year</u> <u>Unit of time equal to 365,25 days.</u> <u>Synonym: Julian year</u>
<u>AP</u>	<u>aluminium pound only</u>
<u>APZ</u>	<u>troy ounce or apothecary ounce</u>
<u>AQ</u>	<u>anti-hemophilic factor (AHF) unit</u> <u>A unit of measure for blood potency (US).</u>
<u>AR</u>	<u>suppository</u>

Formatted Table

Formatted: Font: Bold

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>ARE</u>	<u>are</u>
<u>AS</u>	<u>assortment</u> <u>A unit of count defining the number of assortments (assortment: set of items grouped in a mixed collection).</u>
<u>ASM</u>	<u>alcoholic strength by mass</u> <u>A unit of mass defining the alcoholic strength of a liquid.</u>
<u>ASU</u>	<u>alcoholic strength by volume</u> <u>A unit of volume defining the alcoholic strength of a liquid (e.g. spirit, wine, beer, etc), often at a specific temperature.</u>
<u>ATM</u>	<u>standard atmosphere</u>
<u>ATT</u>	<u>technical atmosphere</u>
<u>AV</u>	<u>capsule</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>AW</u>	<u>powder filled vial</u>
<u>AY</u>	<u>assembly</u> <u>A unit of count defining the number of assemblies (assembly: items that consist of component parts).</u>
<u>AZ</u>	<u>British thermal unit per pound</u>
<u>B0</u>	<u>Btu per cubic foot</u>
<u>B1</u>	<u>barrel (US) per day</u>
<u>B10</u>	<u>bit per second</u> <u>A unit of information equal to one binary digit per second.</u>
<u>B11</u>	<u>joule per kilogram kelvin</u>
<u>B12</u>	<u>joule per metre</u>
<u>B13</u>	<u>joule per square metre</u> <u>Synonym: joule per metre squared</u>
<u>B14</u>	<u>joule per metre to the fourth power</u>
<u>B15</u>	<u>joule per mole</u>
<u>B16</u>	<u>joule per mole kelvin</u>
<u>B17</u>	<u>credit</u> <u>A unit of count defining the number of entries made to the credit side of an account.</u>
<u>B18</u>	<u>joule second</u>
<u>B19</u>	<u>digit</u> <u>A unit of information defining the quantity of numerals used to form a number.</u>
<u>B2</u>	<u>bunk</u>
<u>B20</u>	<u>joule square metre per kilogram</u>
<u>B21</u>	<u>kelvin per watt</u>
<u>B22</u>	<u>kiloampere</u>
<u>B23</u>	<u>kiloampere per square metre</u>
<u>B24</u>	<u>kiloampere per metre</u>

<u>D98</u>	<u>mass pound</u>
<u>D99</u>	<u>sleeve</u>
<u>DAA</u>	<u>decare</u>
<u>DAD</u>	<u>ten day</u> <u>A unit of time defining the number of days in multiples of 10.</u>
<u>DAY</u>	<u>day</u>
<u>DB</u>	<u>dry pound</u> <u>A unit of mass defining the number of pounds of a product, disregarding the water content of the product.</u>
<u>DC</u>	<u>disk (disc)</u>
<u>DD</u>	<u>degree [unit of angle]</u>

Formatted Table

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>DE</u>	<u>deal</u>
<u>DEC</u>	<u>decade</u> <u>A unit of count defining the number of decades (decade: quantity equal to 10 or time equal to 10 years).</u>
<u>DG</u>	<u>decigram</u>
<u>DI</u>	<u>dispenser</u>
<u>DJ</u>	<u>decagram</u>
<u>DLT</u>	<u>decilitre</u>
<u>DMA</u>	<u>cubic decametre</u>
<u>DMK</u>	<u>square decimetre</u>
<u>DMO</u>	<u>standard kilolitre</u> <u>A unit of volume defining the number of kilolitres of a product at a temperature of 15 degrees Celsius, especially in relation to hydrocarbon oils.</u>
<u>DMQ</u>	<u>cubic decimetre</u>
<u>DMT</u>	<u>decimetre</u>
<u>DN</u>	<u>decinewton metre</u>
<u>DPC</u>	<u>dozen piece</u> <u>A unit of count defining the number of pieces in multiples of 12 (piece: an individual part of a larger whole).</u>
<u>DPR</u>	<u>dozen pair</u> <u>A unit of count defining the number of pairs in multiples of 12 (pair: item described by two's).</u>
<u>DPT</u>	<u>displacement tonnage</u> <u>A unit of mass defining the volume of sea water a ship displaces, expressed as the number of tons.</u>
<u>DQ</u>	<u>data record</u>
<u>DR</u>	<u>drum</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>DRA</u>	<u>dram (US)</u>
<u>DR1</u>	<u>dram (UK)</u>
<u>DRL</u>	<u>dozen roll</u> <u>A unit of count defining the number of rolls, expressed in twelve roll units.</u>
<u>DRM</u>	<u>drachm (UK)</u>
<u>DS</u>	<u>display</u>
<u>DT</u>	<u>dry ton</u> <u>A unit of mass defining the number of tons of a product, disregarding the water content of the product.</u>
<u>DTN</u>	<u>decitonne</u> <u>synonym: centner, metric 100 kg; quintal, metric 100 kg</u>
<u>DU</u>	<u>dyne</u>
<u>DWT</u>	<u>pennyweight</u>
<u>DX</u>	<u>dyne per centimetre</u>
<u>DY</u>	<u>directory book</u>
<u>DZN</u>	<u>dozen</u> <u>A unit of count defining the number of units in multiples of 12.</u>
<u>DZP</u>	<u>dozen pack</u> <u>A unit of count defining the number of packs in multiples of 12 (pack: standard packaging unit).</u>
<u>E01</u>	<u>newton per square centimetre</u> <u>A measure of pressure expressed in newtons per square centimetre.</u>
<u>E07</u>	<u>megawatt hour per hour</u> <u>A unit of accumulated energy of a million watts over a period of one hour.</u>
<u>E08</u>	<u>megawatt per hertz</u> <u>A unit of energy expressed as the load change in million watts that will cause a frequency shift of one hertz.</u>

Formatted Table

Formatted: Font: Bold

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>E09</u>	<u>milliampere hour</u> <u>A unit of power load delivered at the rate of one thousandth of an ampere over a period of one hour.</u>
<u>E10</u>	<u>degree day</u> <u>A unit of measure used in meteorology and engineering to measure the demand for heating or cooling over a given period of days.</u>
<u>E11</u>	<u>gigacalorie</u> <u>A unit of heat energy equal to one thousand million calories.</u>
<u>E12</u>	<u>mille</u> <u>A unit of count defining the number of cigarettes in units of 1000.</u>
<u>E14</u>	<u>kilocalorie (IT)</u> <u>A unit of heat energy equal to one thousand calories.</u>
<u>E15</u>	<u>kilocalorie (TH) per hour</u> <u>A unit of energy equal to one thousand calories per hour.</u>
<u>E16</u>	<u>million Btu(IT) per hour</u> <u>A unit of power equal to one million British thermal units per hour.</u>
<u>E17</u>	<u>cubic foot per second</u> <u>A unit of volume equal to one cubic foot passing a given point in a period of one second.</u>
<u>E18</u>	<u>tonne per hour</u> <u>A unit of weight or mass equal to one tonne per hour.</u>
<u>E19</u>	<u>ping</u> <u>A unit of area equal to 3.3 square metres.</u>
<u>E2</u>	<u>belt</u>
<u>E20</u>	<u>megabit per second</u> <u>A unit of information equal to 10<sup>6</sup> (1000000) bits (binary digits) per second.</u>
<u>E21</u>	<u>shares</u> <u>A unit of count defining the number of shares (share: a total or portion of the parts into which a business entity's capital is divided).</u>
<u>E22</u>	<u>TEU</u> <u>A unit of count defining the number of twenty-foot equivalent units (TEUs) as a measure of containerized cargo capacity.</u>
<u>E23</u>	<u>tyre</u> <u>A unit of count defining the number of tyres (a solid or air-filled covering placed around a wheel rim to form a soft contact with the road, absorb shock and provide traction).</u>
<u>E25</u>	<u>active unit</u> <u>A unit of count defining the number of active units within a substance.</u>
<u>E27</u>	<u>dose</u> <u>A unit of count defining the number of doses (dose: a definite quantity of a medicine or drug).</u>
<u>E28</u>	<u>air dry ton</u> <u>A unit of mass defining the number of tons of a product, disregarding the water content of the product.</u>
<u>E3</u>	<u>trailer</u>
<u>E30</u>	<u>strand</u> <u>A unit of count defining the number of strands (strand: long, thin, flexible, single thread, strip of fibre, constituent filament or multiples of the same, twisted together).</u>
<u>E31</u>	<u>square metre per litre</u> <u>A unit of count defining the number of square metres per litre.</u>
<u>E32</u>	<u>litre per hour</u> <u>A unit of count defining the number of litres per hour.</u>
<u>E33</u>	<u>foot per thousand</u> <u>A unit of count defining the number of feet per thousand units.</u>

Formatted Table

<u>IV</u>	<u>inch per second squared</u>
<u>I2</u>	<u>joule per kilogram</u>
<u>JB</u>	<u>jumbo</u>
<u>JE</u>	<u>joule per kelvin</u>
<u>JG</u>	<u>jug</u> Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).
<u>JK</u>	<u>megajoule per kilogram</u>
<u>JM</u>	<u>megajoule per cubic metre</u>
<u>JNT</u>	<u>pipeline joint</u> A count of the number of pipeline joints.
<u>JO</u>	<u>joint</u>
<u>JOU</u>	<u>joule</u>
<u>JPS</u>	<u>hundred metre</u> A unit of count defining the number of 100 metre lengths.
<u>JR</u>	<u>jar</u> Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).
<u>JWL</u>	<u>number of jewels</u> A unit of count defining the number of jewels (jewel: precious stone).
<u>K1</u>	<u>kilowatt demand</u> A unit of measure defining the power load measured at predetermined intervals.
<u>K2</u>	<u>kilovolt ampere reactive demand</u> A unit of measure defining the reactive power demand equal to one kilovolt ampere of reactive power.
<u>K3</u>	<u>kilovolt ampere reactive hour</u> A unit of measure defining the accumulated reactive energy equal to one kilovolt ampere of reactive power per hour.
<u>K5</u>	<u>kilovolt ampere (reactive)</u> Use kilovar (common code KVR)
<u>K6</u>	<u>kilolitre</u>
<u>KA</u>	<u>cake</u> A unit of count defining the number of cakes (cake: object shaped into a flat, compact mass).
<u>KAT</u>	<u>katal</u> A unit of catalytic activity defining the catalytic activity of enzymes and other catalysts.
<u>KB</u>	<u>kilocharacter</u> A unit of information equal to 10 <sup>3</sup> (1000) characters.
<u>KBA</u>	<u>kilobar</u>
<u>KCC</u>	<u>kilogram of choline chloride</u> A unit of mass equal to one thousand grams of choline chloride.
<u>KD</u>	<u>kilogram decimal</u>
<u>KDW</u>	<u>kilogram drained net weight</u> A unit of mass defining the net number of kilograms of a product, disregarding the liquid content of the product.
<u>KEL</u>	<u>kelvin</u> Refer ISO 80000-5 (Quantities and units — Part 5: Thermodynamics)
<u>KF</u>	<u>kilopacket</u>
<u>KG</u>	<u>keg</u> Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).
<u>KGM</u>	<u>kilogram</u> A unit of mass equal to one thousand grams.

Formatted Table

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>KGS</u>	<u>kilogram per second</u>
<u>KHY</u>	<u>kilogram of hydrogen peroxide</u> <u>A unit of mass equal to one thousand grams of hydrogen peroxide.</u>
<u>KHZ</u>	<u>kilohertz</u>
<u>KI</u>	<u>kilogram per millimetre width</u>
<u>KIC</u>	<u>kilogram, including container</u> <u>A unit of mass defining the number of kilograms of a product, including its container.</u>
<u>KIP</u>	<u>kilogram, including inner packaging</u> <u>A unit of mass defining the number of kilograms of a product, including its inner packaging materials.</u>
<u>KJ</u>	<u>kilosegment</u> <u>A unit of information equal to 10<sup>3</sup> (1000) segments.</u>
<u>KJO</u>	<u>kilojoule</u>
<u>KL</u>	<u>kilogram per metre</u>
<u>CLK</u>	<u>lactic dry material percentage</u> <u>A unit of proportion defining the percentage of dry lactic material in a product.</u>
<u>KMA</u>	<u>kilogram of methylamine</u> <u>A unit of mass equal to one thousand grams of methylamine.</u>
<u>KMH</u>	<u>kilometre per hour</u>
<u>KMK</u>	<u>square kilometre</u>
<u>KMQ</u>	<u>kilogram per cubic metre</u> <u>A unit of weight expressed in kilograms of a substance that fills a volume of one cubic metre.</u>
<u>KMT</u>	<u>kilometre</u>
<u>KNI</u>	<u>kilogram of nitrogen</u> <u>A unit of mass equal to one thousand grams of nitrogen.</u>
<u>KNS</u>	<u>kilogram named substance</u> <u>A unit of mass equal to one kilogram of a named substance.</u>
<u>KNT</u>	<u>knot</u>
<u>KO</u>	<u>milliequivalence caustic potash per gram of product</u> <u>A unit of count defining the number of milligrams of potassium hydroxide per gram of product as a measure of the concentration of potassium hydroxide in the product.</u>
<u>KPA</u>	<u>kilopascal</u>
<u>KPH</u>	<u>kilogram of potassium hydroxide (caustic potash)</u> <u>A unit of mass equal to one thousand grams of potassium hydroxide (caustic potash).</u>
<u>KPO</u>	<u>kilogram of potassium oxide</u> <u>A unit of mass equal to one thousand grams of potassium oxide.</u>
<u>KPP</u>	<u>kilogram of phosphorus pentoxide (phosphoric anhydride)</u> <u>A unit of mass equal to one thousand grams of phosphorus pentoxide phosphoric anhydride.</u>
<u>KR</u>	<u>kiloroentgen</u>
<u>KS</u>	<u>thousand pound per square inch</u>
<u>KSD</u>	<u>kilogram of substance 90 % dry</u> <u>A unit of mass equal to one thousand grams of a named substance that is 90% dry.</u>
<u>KSH</u>	<u>kilogram of sodium hydroxide (caustic soda)</u> <u>A unit of mass equal to one thousand grams of sodium hydroxide (caustic soda).</u>
<u>KT</u>	<u>kit</u> <u>A unit of count defining the number of kits (kit: tub, barrel or pail).</u>
<u>KTM</u>	<u>kilometre</u>
<u>KTN</u>	<u>kilotonne</u>

<u>KWH</u>	<u>kilowatt hour</u>
<u>KWO</u>	<u>kilogram of tungsten trioxide</u> <u>A unit of mass equal to one thousand grams of tungsten trioxide.</u>
<u>KWT</u>	<u>kilowatt</u>
<u>KX</u>	<u>millilitre per kilogram</u>
<u>L2</u>	<u>litre per minute</u>
<u>LA</u>	<u>pound per cubic inch</u>
<u>LAC</u>	<u>lactose excess percentage</u> <u>A unit of proportion defining the percentage of lactose in a product that exceeds a defined percentage level.</u>
<u>LBR</u>	<u>pound</u>
<u>LBT</u>	<u>troy pound (US)</u>
<u>LC</u>	<u>linear centimetre</u>
<u>LD</u>	<u>litre per day</u>
<u>LE</u>	<u>lite</u>
<u>LEF</u>	<u>leaf</u> <u>A unit of count defining the number of leaves.</u>
<u>LF</u>	<u>linear foot</u> <u>A unit of count defining the number of feet (12-inch) in length of a uniform width object.</u>
<u>LH</u>	<u>labour hour</u> <u>A unit of time defining the number of labour hours.</u>
<u>LI</u>	<u>linear inch</u>
<u>LJ</u>	<u>large spray</u>
<u>LK</u>	<u>link</u> <u>A unit of distance equal to 0.01 chain.</u>
<u>LM</u>	<u>linear metre</u> <u>A unit of count defining the number of metres in length of a uniform width object.</u>
<u>LN</u>	<u>length</u> <u>A unit of distance defining the linear extent of an item measured from end to end.</u>
<u>LO</u>	<u>lot [unit of procurement]</u> <u>A unit of count defining the number of lots (lot: a collection of associated items).</u>
<u>LP</u>	<u>liquid pound</u> <u>A unit of mass defining the number of pounds of a liquid substance.</u>
<u>LPA</u>	<u>litre of pure alcohol</u> <u>A unit of volume equal to one litre of pure alcohol.</u>
<u>LR</u>	<u>layer</u> <u>A unit of count defining the number of layers.</u>
<u>LS</u>	<u>lump sum</u> <u>A unit of count defining the number of whole or a complete monetary amounts.</u>
<u>LTN</u>	<u>ton (UK) or long ton (US)</u>
<u>LTR</u>	<u>litre</u>
<u>LUB</u>	<u>metric ton, lubricating oil</u> <u>A unit of mass defining the number of metric tons of lubricating oil.</u>
<u>LUM</u>	<u>lumen</u>
<u>LUX</u>	<u>lux</u>
<u>LX</u>	<u>linear yard per pound</u>

Formatted Table

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>LY</u>	<u>linear yard</u> <u>A unit of count defining the number of 36-inch units in length of a uniform width object.</u>
<u>M0</u>	<u>magnetic tape</u>
<u>M1</u>	<u>milligram per litre</u>
<u>M4</u>	<u>monetary value</u> <u>A unit of measure expressed as a monetary amount.</u>
<u>M5</u>	<u>microcurie</u>
<u>M7</u>	<u>micro-inch</u>
<u>M9</u>	<u>million Btu per 1000 cubic feet</u>
<u>MA</u>	<u>machine per unit</u>
<u>MAH</u>	<u>megavolt ampere reactive hours</u> <u>A unit of electrical reactive power defining the total amount of reactive power across a power system.</u>
<u>MAL</u>	<u>mega litre</u>
<u>MAM</u>	<u>megametre</u>
<u>MAR</u>	<u>megavolt ampere reactive</u> <u>A unit of electrical reactive power represented by a current of one thousand amperes flowing due a potential difference of one thousand volts where the sine of the phase angle between them is 1.</u>
<u>MAW</u>	<u>megawatt</u> <u>A unit of power defining the rate of energy transferred or consumed when a current of 1000 amperes flows due to a potential of 1000 volts at unity power factor.</u>
<u>MBE</u>	<u>thousand standard brick equivalent</u> <u>A unit of count defining the number of one thousand brick equivalent units.</u>
<u>MBF</u>	<u>thousand board feet</u> <u>A unit of volume equal to one thousand board feet.</u>
<u>MBR</u>	<u>millibar</u>
<u>MC</u>	<u>microgram</u>
<u>MCU</u>	<u>millicurie</u>
<u>MD</u>	<u>air dry metric ton</u> <u>A unit of count defining the number of metric tons of a product, disregarding the water content of the product.</u>
<u>ME</u>	<u>milligram per square foot per side</u>

<u>NI</u>	<u>net imperial gallon</u>
<u>NIU</u>	<u>number of international units</u> <u>A unit of count defining the number of international units.</u>
<u>NJ</u>	<u>number of screens</u>
<u>NL</u>	<u>load</u> <u>A unit of volume defining the number of loads (load: a quantity of items carried or processed at one time).</u>
<u>NMI</u>	<u>nautical mile</u>
<u>NMP</u>	<u>number of packs</u> <u>A unit of count defining the number of packs (pack: a collection of objects packaged together).</u>
<u>NN</u>	<u>train</u>
<u>NPL</u>	<u>number of parcels</u>
<u>NPR</u>	<u>number of pairs</u> <u>A unit of count defining the number of pairs (pair: item described by two's).</u>
<u>NPT</u>	<u>number of parts</u> <u>A unit of count defining the number of parts (part: component of a larger entity).</u>

Formatted Table

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>NQ</u>	<u>mho</u>
<u>NR</u>	<u>micromho</u>
<u>NRL</u>	<u>number of rolls</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>NT</u>	<u>net ton</u> <u>A unit of mass equal to 2000 pounds, see ton (US). Refer International Convention on tonnage measurement of Ships.</u>
<u>NTT</u>	<u>net register ton</u> <u>A unit of mass equal to the total cubic footage after deductions, where 1 register ton is equal to 100 cubic feet. Refer International Convention on tonnage measurement of Ships.</u>
<u>NU</u>	<u>newton metre</u>
<u>NV</u>	<u>vehicle</u>
<u>NX</u>	<u>part per thousand</u> <u>A unit of proportion equal to 10<sup>3</sup>.</u>
<u>NY</u>	<u>pound per air dry metric ton</u>
<u>OA</u>	<u>panel</u> <u>A unit of count defining the number of panels (panel: a distinct, usually rectangular, section of a surface).</u>
<u>ODE</u>	<u>ozone depletion equivalent</u> <u>A unit of mass defining the ozone depletion potential in kilograms of a product relative to the calculated depletion for the reference substance, Trichlorofluoromethane (CFC-11).</u>
<u>OHM</u>	<u>ohm</u>
<u>ON</u>	<u>ounce per square yard</u>
<u>ONZ</u>	<u>ounce</u>
<u>OP</u>	<u>two pack</u>
<u>OT</u>	<u>overtime hour</u> <u>A unit of time defining the number of overtime hours.</u>
<u>OZ</u>	<u>ounce av</u> <u>A unit of measure equal to 1/16 of a pound or about 28.3495 grams (av = avoirdupois).</u>
<u>OZA</u>	<u>fluid ounce (US)</u>
<u>OZ1</u>	<u>fluid ounce (UK)</u>
<u>P0</u>	<u>page - electronic</u>
<u>P1</u>	<u>percent</u> <u>A unit of proportion equal to 0.01.</u>
<u>P2</u>	<u>pound per foot</u>
<u>P3</u>	<u>three pack</u>
<u>P4</u>	<u>four pack</u>
<u>P5</u>	<u>five pack</u> <u>A unit of count defining the number of five-packs (five-pack: set of five items packaged together).</u>
<u>P6</u>	<u>six pack</u>
<u>P7</u>	<u>seven pack</u>
<u>P8</u>	<u>eight pack</u>
<u>P9</u>	<u>nine pack</u>
<u>PA</u>	<u>packet</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>PAL</u>	<u>pascal</u>
<u>PB</u>	<u>pair inch</u>
<u>PD</u>	<u>pad</u> <u>A unit of count defining the number of pads (pad: block of paper sheets fastened together at one end).</u>

Formatted Table

Formatted: Font: Bold

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>PE</u>	<u>pound equivalent</u>
<u>PF</u>	<u>pallet (lift)</u> Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).
<u>PFL</u>	<u>proof litre</u> A unit of volume equal to one litre of proof spirits, or the alcohol equivalent thereof. Used for measuring the strength of distilled alcoholic liquors, expressed as a percentage of the alcohol content of a standard mixture at a specific temperature.
<u>PG</u>	<u>plate</u> Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).
<u>PGL</u>	<u>proof gallon</u> A unit of volume equal to one gallon of proof spirits, or the alcohol equivalent thereof. Used for measuring the strength of distilled alcoholic liquors, expressed as a percentage of the alcohol content of a standard mixture at a specific temperature.
<u>PI</u>	<u>pitch</u> A unit of count defining the number of characters that fit in a horizontal inch.
<u>PK</u>	<u>pack</u> Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet). Synonym: package
<u>PL</u>	<u>pail</u> Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).
<u>PLA</u>	<u>degree Plato</u> A unit of proportion defining the sugar content of a product, especially in relation to beer.
<u>PM</u>	<u>pound percentage</u>
<u>PN</u>	<u>pound net</u>
<u>PQ</u>	<u>pound per inch of length</u>
<u>PQ</u>	<u>page per inch</u> A unit of quantity defining the degree of thickness of a bound publication, expressed as the number of pages per inch of thickness.
<u>PR</u>	<u>pair</u> A unit of count defining the number of pairs (pair: item described by two's).
<u>PS</u>	<u>pound-force per square inch</u>
<u>PT</u>	<u>pint (US)</u> Use liquid pint (common code PTL)
<u>PTD</u>	<u>dry pint (US)</u>
<u>PTI</u>	<u>pint (UK)</u>
<u>PTL</u>	<u>liquid pint (US)</u>
<u>PU</u>	<u>tray / tray pack</u> Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).
<u>PV</u>	<u>half pint (US)</u>
<u>PW</u>	<u>pound per inch of width</u>
<u>PY</u>	<u>peck dry (US)</u>
<u>PZ</u>	<u>peck dry (UK)</u>
<u>Q3</u>	<u>meal</u> A unit of count defining the number of meals (meal: an amount of food to be eaten on a single occasion).
<u>QA</u>	<u>page - facsimile</u> A unit of count defining the number of facsimile pages.

Formatted Table

<b>CL21</b>	<b>Measurement unit code</b> <b>Code specifying the unit of measurement.</b>
<u>QAN</u>	<u>quarter (of a year)</u> <u>A unit of time defining the number of quarters (3 months).</u>
<u>QB</u>	<u>page - hardcopy</u> <u>A unit of count defining the number of hardcopy pages (hardcopy page: a page rendered as printed or written output on paper, film, or other permanent medium).</u>
<u>QD</u>	<u>quarter dozen</u>
<u>QH</u>	<u>quarter hour</u>
<u>QK</u>	<u>quarter kilogram</u>
<u>QR</u>	<u>quire</u> <u>A unit of count for paper, expressed as the number of quires (quire: a number of paper sheets, typically 25).</u>
<u>QT</u>	<u>quart (US)</u> <u>Use liquid quart (common code QTL)</u>
<u>QTD</u>	<u>dry quart (US)</u>
<u>QTI</u>	<u>quart (UK)</u>
<u>QTL</u>	<u>liquid quart (US)</u>
<u>QTR</u>	<u>quarter (UK)</u>
<u>R1</u>	<u>pica</u> <u>A unit of count defining the number of picas. (pica: typographical length equal to 12 points or 4.22 mm (approx.)).</u>
<u>R4</u>	<u>calorie</u>
<u>R9</u>	<u>thousand cubic metre</u> <u>A unit of volume equal to one thousand cubic metres</u>
<u>RA</u>	<u>rack</u>
<u>RD</u>	<u>rod</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>RG</u>	<u>ring</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>RH</u>	<u>running or operating hour</u> <u>A unit of time defining the number of hours of operation.</u>
<u>RK</u>	<u>roll metric measure</u>
<u>RL</u>	<u>reel</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>RM</u>	<u>ream</u> <u>A unit of count for paper, expressed as the number of reams (ream: a large quantity of paper sheets, typically 500).</u>
<u>RN</u>	<u>ream metric measure</u>
<u>RO</u>	<u>roll</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>RP</u>	<u>pound per ream</u> <u>A unit of mass for paper, expressed as pounds per ream. (ream: a large quantity of paper, typically 500 sheets).</u>
<u>RPM</u>	<u>revolutions per minute</u> <u>Refer ISO/TC12 SI Guide</u>
<u>RPS</u>	<u>revolutions per second</u> <u>Refer ISO/TC12 SI Guide</u>
<u>RS</u>	<u>reset</u>
<u>RT</u>	<u>revenue ton mile</u> <u>A unit of information typically used for billing purposes, expressed as the number of revenue tons (revenue ton: either a metric ton or a cubic metres, whichever is the larger), moved over a distance of one mile.</u>

Formatted Table

Formatted: Font: Bold

<u>RU</u>	<u>run</u>
<u>S3</u>	<u>square foot per second</u> <u>Synonym: foot squared per second</u>
<u>S4</u>	<u>square metre per second</u> <u>Synonym: metre squared per second (square metres/second US)</u>
<u>S5</u>	<u>sixty fourths of an inch</u>
<u>S6</u>	<u>session</u>
<u>S7</u>	<u>storage unit</u>
<u>S8</u>	<u>standard advertising unit</u>
<u>SA</u>	<u>sack</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>SAN</u>	<u>half year (6 months)</u> <u>A unit of time defining the number of half years (6 months).</u>
<u>SCO</u>	<u>score</u> <u>A unit of count defining the number of units in multiples of 20.</u>
<u>SCR</u>	<u>scruple</u>
<u>SD</u>	<u>solid pound</u>
<u>SE</u>	<u>section</u>
<u>SEC</u>	<u>second [unit of time]</u>
<u>SET</u>	<u>set</u> <u>A unit of count defining the number of sets (set: a number of objects grouped together).</u>
<u>SG</u>	<u>segment</u> <u>A unit of information equal to 64000 bytes.</u>
<u>SHT</u>	<u>shipping ton</u> <u>A unit of mass defining the number of tons for shipping.</u>
<u>SIE</u>	<u>siemens</u>
<u>SK</u>	<u>split tank truck</u>
<u>SL</u>	<u>slipsheet</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>SMI</u>	<u>mile (statute mile)</u>
<u>SN</u>	<u>square rod</u>
<u>SQ</u>	<u>spool</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>SP</u>	<u>shelf package</u>
<u>SQ</u>	<u>square</u> <u>A unit of count defining the number of squares (square: rectangular shape).</u>
<u>SQR</u>	<u>square, roofing</u> <u>A unit of count defining the number of squares of roofing materials, measured in multiples of 100 square feet.</u>
<u>SR</u>	<u>strip</u> <u>A unit of count defining the number of strips (strip: long narrow piece of an object).</u>
<u>SS</u>	<u>sheet metric measure</u>
<u>SST</u>	<u>short standard (7200 matches)</u>
<u>ST</u>	<u>sheet</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>STI</u>	<u>stone (UK)</u>
<u>STK</u>	<u>stick, cigarette</u> <u>A unit of count defining the number of cigarettes in the smallest unit for stock-taking and/or duty computation.</u>

Formatted Table

<u>CL21</u>	<u>Measurement unit code</u> <u>Code specifying the unit of measurement.</u>
<u>STL</u>	<u>standard litre</u> <u>A unit of volume defining the number of litres of a product at a temperature of 15 degrees Celsius, especially in relation to hydrocarbon oils.</u>
<u>STN</u>	<u>ton (US) or short ton (UK/US)</u> <u>Synonym: net ton (2000 lb)</u>
<u>SV</u>	<u>skid</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>SW</u>	<u>skein</u> <u>A unit of count defining the number of skeins (skein: a loosely-coiled bundle of yarn or thread).</u>
<u>SX</u>	<u>shipment</u> <u>A unit of count defining the number of shipments (shipment: an amount of goods shipped or transported).</u>
<u>T0</u>	<u>telecommunication line in service</u> <u>A unit of count defining the number of lines in service.</u>
<u>T1</u>	<u>thousand pound gross</u>
<u>T3</u>	<u>thousand piece</u> <u>A unit of count defining the number of pieces in multiples of 10 (piece: an individual part of a larger whole).</u>
<u>T4</u>	<u>thousand bag</u>
<u>T5</u>	<u>thousand casing</u>
<u>T6</u>	<u>thousand gallon (US)</u>
<u>T7</u>	<u>thousand impression</u>
<u>T8</u>	<u>thousand linear inch</u>
<u>TA</u>	<u>tenth cubic foot</u>
<u>TAH</u>	<u>kiloampere hour (thousand ampere hour)</u>
<u>TC</u>	<u>truckload</u>
<u>TD</u>	<u>therm</u>
<u>TE</u>	<u>tote</u>
<u>TF</u>	<u>ten square yard</u>
<u>TI</u>	<u>thousand square inch</u>
<u>TIC</u>	<u>metric ton, including container</u> <u>A unit of mass defining the number of metric tons of a product, including its container.</u>
<u>TIP</u>	<u>metric ton, including inner packaging</u> <u>A unit of mass defining the number of metric tons of a product, including its inner packaging materials.</u>
<u>TJ</u>	<u>thousand square centimetre</u>
<u>TK</u>	<u>tank, rectangular</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>TL</u>	<u>thousand feet (linear)</u>
<u>TMS</u>	<u>kilogram of imported meat, less offal</u> <u>A unit of mass equal to one thousand grams of imported meat, disregarding less valuable by-products such as the entrails.</u>
<u>TN</u>	<u>tin</u> <u>Use UN/ECE Recommendation 21 (refer to Note 2 in the spreadsheet introduction, 1st sheet).</u>
<u>TNE</u>	<u>tonne (metric ton)</u> <u>Synonym: metric ton</u>
<u>TP</u>	<u>ten pack</u> <u>A unit of count defining the number of items in multiples of 10.</u>
<u>TPR</u>	<u>ten pair</u> <u>A unit of count defining the number of pairs in multiples of 100 (pair: item described by two's).</u>

Formatted Table

Formatted Table

3.2.8.27 CL99 - Error code

<b>CL99</b>	<b>Error code</b>
<b>12</b>	<b>Incorrect (code) value</b> Value of an element in a message is outside the predefined domain or not part of the applicable code list.
<b>13</b>	<b>Missing</b> A mandatory/required element is missing in the received data, e.g. a required element like the MRN for the Arrival Advice (C_ARR_ADV) is not present.
<b>14</b>	<b>Value not supported in this position (code value constraint)</b> Notification that a recipient does not support use of the specific value of an identified element in the position where it is used. This type of error refers to the use of an improper code value for a specific element.
<b>15</b>	<b>Not supported in this position</b> An element is not allowed to have a value due to the following two reasons: - The element is not allowed to be present according to the FMS message specification. - The element is not allowed to be present according to some additional condition, e.g. if type of packages has the value 'UNPACKED' then number of package can not have a value.
<b>19</b>	<b>Invalid decimal notation</b> The decimal notation is not according to the decimal formatting standards UCL, UCM, UCD.
<b>26</b>	<b>Duplicate detected</b> The same interchange is received again. Duplication is detected by reception of an interchange reference that has already been received.
<b>35</b>	<b>Too many repetitions</b> Too many occurrences of a segment or entity.
<b>37</b>	<b>Invalid type characters</b> Notification that one or more numeric characters were used in an alphabetic element or that one or more alphabetic characters were used in a numeric element.
<b>38</b>	<b>Missing digit in front of decimal sign</b> Notification that a decimal sign is not preceded by one or more digits.
<b>39</b>	<b>Element too long (length constraint)</b> Notification that the length of the element received exceeded the maximum length specified.
<b>40</b>	<b>Element too short (length constraint)</b> Notification that the length of an element received is shorter than the minimum length specified.
<b>92</b>	<b>Message out of sequence</b> The message can not be processed, because the receiver is not in a proper state.

## Annex I

### Requirements list

The requirements list provides an artefact for storing discrete, measurable business requirements and constraints. As requirements and constraints are discovered in performing the modelling steps they are added to this running list by the secretariat. Note: requirements shall be referenced in all modelling artefacts, and if necessary, each requirement should reference modelling artefact(s) that are based on it.

<i>Req. #</i>	<i>Statement</i>	<i>Source</i>	<i>Date</i>	<i>Status</i>
1	The international organization organizes and ensures the proper functioning of the guarantee chain for a TIR transport. A TIR transport can be associated to one and only one international organization. The international organization can represent the guarantee chain for an unlimited number of transports.	ExG Warsaw	28-29 June 2004	Used in 1.6
2	The international organization has member associations. The membership is associated to at least one country. An association has to be member of at least one international organization. An international organization can have any number of member associations. A membership can be associated to various countries (e.g. FEBETRA –IRU has a membership valid for Belgium but also for Luxembourg) and one country can be covered by various memberships.	ExG Warsaw	28-29 June 2004	Used in 1.6
3	An association has two roles represented by the subdivision of the association into its issuing role (issuing association), responsible for the issuance of TIR Carnets to the TIR Carnets holders, and its guaranteeing role (guaranteeing association), representing the guarantee chain in its national territory. The two roles cannot be disconnected	ExG Warsaw	28-29 June 2004	Used in 1.6
4	The issuing association issues TIR Carnets for TIR transports. One and only one issuing association is issuing the TIR Carnet for a TIR transport. The issuing association can issue TIR Carnets for numerous TIR transports.	ExG Warsaw	28-29 June 2004	Used in 1.6
5	Deleted			
6	A road vehicle can serve in numerous TIR transports. A TIR transport is performed by means of one or many road vehicles.	ExG Warsaw	28-29 June 2004	Used in 1.6
7	A road vehicle is composed of zero or many load compartments. A load compartment is part of a single road vehicle.	ExG Warsaw	28-29 June 2004	Used in 1.6

Formatted: Font: Bold

<i>Req. #</i>	<i>Statement</i>	<i>Source</i>	<i>Date</i>	<i>Status</i>
8	A sealed loading unit is a generalization of a container and a load compartment of a road vehicle.	ExG Warsaw	28-29 June 2004	Used in 1.6
9	A sealed loading unit can contain numerous loads, mentioned in the TIR Carnet as Goods Manifest Line Items. The goods described in the Goods Manifest Line Item are contained in one and only one sealed loading unit. In case of heavy and bulky goods (HBG), the goods described in the Goods Manifest Line Item may not be contained in a sealed loading unit.			Used in 1.6
10	A TIR transport is composed of TIR operations. The number of TIR operations within a TIR transport is at the moment limited to ten with the current paper system and has a minimum of two (these limitations should be extensible; therefore, two to many is more advisable). A TIR operation is part of one and only one TIR transport.	ExG Warsaw	28-29 June 2004	Used in 1.6
11	A Goods Manifest Line Item is associated to one and only one TIR transport. A TIR transport can have from one to many Goods Manifest Line Items.			Used in 1.6
12	A TIR transport is performed by one and only one TIR Carnet holder. A TIR Carnet holder can perform any number of TIR transports.	ExG Warsaw	28-29 June 2004	Used in 1.6
13	The TIR operation is started at one and only one Customs office and terminated at one and only one Customs office. A Customs office can start and terminate any number of TIR operations.	ExG Warsaw	28-29 June 2004	Used in 1.6
14	The goods described in one single Goods Manifest Line Item arrive at and have their termination certified by a one and only one Customs office of destination. A Customs office can "terminate" any number of goods described in Goods Manifest Line Items.			Used in 1.6
15	A Goods Manifest Line Item has one and only one intended Customs office of destination. A Customs office can be the intended destination of numerous Goods Manifest Line Items.			Used in 1.6
16	Deleted			
17	The goods described in a Goods Manifest Line Item are loaded at a single Customs office of departure. A Customs office can be the departure for any number of goods described in Goods Manifest Line Items.			Used in 1.6
18	A Customs office is located in one and only one Contracting Party. A Contracting Party can have	ExG Warsaw	28-29 June	Used in 1.6

<i>Req. #</i>	<i>Statement</i>	<i>Source</i>	<i>Date</i>	<i>Status</i>
	any number of Customs offices.		2004	
19	A transport operator is established in one and only one Contracting Party. A Contracting Party can be the residence of numerous transport operators.	ExG Warsaw	28-29 June 2004	Used in 1.6
20	The printing and distribution of TIR Carnets can only be performed by an approved international organization.	ExG Geneva	26-27 October 2004	Used in 1.2.1
21	Only an approved association can issue TIR Carnets.	ExG Geneva	26-27 October 2004	Used in 1.2.1
22	TIR Carnets shall be issued only to authorized persons.	ExG Geneva	26-27 October 2004	Used in 1.2.1
23	A TIR transport can only be performed by means of road vehicles, combinations of vehicles or containers previously approved under the conditions set forth in Chapter III of the Convention.	ExG Geneva	26-27 October 2004	Used in 1.2.1
24	A TIR transport must be performed under cover of a TIR Carnet.	ExG Geneva	26-27 October 2004	Used in 1.2.1
25	A TIR transport must be guaranteed by associations approved in accordance with the provisions of Article 6 of the Convention.	ExG Geneva	26-27 October 2004	Used in 1.2.1
26	Customs authorities can use national and international risk analysis data to assess risk in relation to the TIR transport.	ExG Geneva	26-27 October 2004	Used in 1.2.1
27	When the TIR transport has ended, the TIR Carnet is returned to the holder, then to the association and finally to the international organization.	ExG Geneva	26-27 October 2004	Used in 1.2.1
28	The international organization and the associations uses the control system for TIR Carnets to check TIR Carnets.	ExG Geneva	26-27 October 2004	Used in 1.2.1
29	The international organization can perform risk analysis with data stored in the repository.	ExG Geneva	26-27 October 2004	Used in 1.2.1
30	Risk analysis can be performed with data from the control system for TIR Carnets.	ExG Geneva	26-27 October 2004	Used in 1.2.1
31	The control system for TIR Carnets stores data regarding the distribution of TIR Carnets.	ExG Geneva	26-27 October 2004	Used in 1.2.1
32	The control system for TIR Carnets stores data on the termination of TIR operation at Customs	ExG	26-27 October	Used in

	offices of destination as transmitted by Customs authorities.	Geneva	2004	1.2.1
33	The TIR procedure as laid down in the TIR Convention.	ExG Geneva	26-27 October 2004	Used in 1.2.1
34	All through the TIR transport, national Customs authorities need the information in the TIR Carnet to feed their national systems.	ExG Geneva	26-27 October 2004	Used in 1.2.1
35	All through the TIR transport, national Customs authorities need data from their national systems to feed the TIR Carnet.	ExG Geneva	26-27 October 2004	Used in 1.2.1

## Annex II

## TIR glossary

The TIR glossary captures any terms and acronyms the reader might need to understand about the TIR procedure domain. The glossary is maintained in a running list by the secretariat throughout the requirements gathering/modelling process. This document is used to define terminology associated with TIR procedure business process modelling as well as terminology specific to it, explaining terms (or groups of terms from a sub-business domain) that may be unfamiliar to the reader of the use-case descriptions or other project documents. Often, this document can be used as an informal data dictionary, capturing data definitions so that use-case descriptions and other project documents can focus on what the system shall do with the information. Reference may be made to external documents that give such details.

Load compartment	Compartment intended for containing goods	Secretariat	ExG 28-29 June 2004
National Association	An association approved by the Customs authorities of a Contracting Party to issue TIR Carnets and to act as surety for persons using the TIR procedure	Secretariat	ExG 28-29 June 2004
Road Vehicle	Not only any power-driven road vehicle but also any trailer or semi-trailer designed to be coupled thereto	Art. 1 (g)	ExG 28-29 June 2004
Sealed loading unit	Any part of a container or load compartment suited for sealing under the conditions stipulated by the TIR Convention	Secretariat	ExG 28-29 June 2004
Good Manifest Line Item	Goods Manifest Line Item expresses the way goods are described and listed in the TIR carnet according to the points B.10.a), d), e) of the "Rules regarding the use of the TIR carnet". Specifically, these rules state that goods must be clearly separated by the combination of vehicle or container, Customs office of departure and the intended customs office of destination.	ExG	ExG 26-27 May 2005
TIR operation	The part of a TIR transport that is carried out in a Contracting Party from a Customs office of departure or entry (en route) to a Customs office of destination (en route)	Art. 1 (b)	ExG 28-29 June 2004
TIR transport	The transport of goods from a Customs office of departure to a Customs office of destination under the procedure, called the TIR procedure, laid down in the TIR Convention	Art. 1 (a)	ExG 28-29 June 2004

<i>Term</i>	<i>Definition</i>	<i>Source</i>	<i>Date</i>
TIR Carnet holder	The person to whom a TIR Carnet has been issued in accordance with the relevant provisions of the TIR Convention and on whose behalf a Customs declaration has been made in the form of a TIR Carnet indicating a wish to place goods under the TIR procedure at the Customs office of departure. He shall be responsible for the presentation of the road vehicle, combination of vehicles or the container together with the load and the TIR Carnet relating thereto at the Customs office of departure, the Customs office en route and the Customs office of destination and for due observance of the other relevant provisions of the TIR Convention.	Art. 1 (e)	ExG 28-29 June 2004
Transport operator	Person actually transporting the goods or in charge of or responsible for the operation of the means of transport on behalf of the TIR Carnet holder	ExG Warsaw	ExG 28-29 June 2004
Driver	Natural person operating the means of transport on behalf of the TIR Carnet holder	ExG Warsaw	ExG 28-29 June 2004
Forwarder	Person performing services (such as receiving, transshipping or delivering), designed to assure and facilitate the passage of goods to their destination on behalf of the TIR Carnet holder	ExG Warsaw	ExG 28-29 June 2004
Consignor	Person consigning goods on behalf of the TIR Carnet holder	ExG Warsaw	ExG 28-29 June 2004
Consignee	Person receiving goods	ExG Warsaw	ExG 28-29 June 2004
Start of a TIR operation	The road vehicle, the combination of vehicles or the container have been presented for purposes of control to the Customs office of departure or entry (en route) together with the load and the TIR Carnet relating thereto and the TIR Carnet has been accepted by the Customs office	Art. 1 (c)	ExG 26-27 October 2004
Termination of a TIR operation	The road vehicle, the combination of vehicles or the container have been presented for purposes of control to the Customs office of destination or of exit (en route) together with the load and the TIR Carnet relating thereto.	Art. 1 (d)	ExG 26-27 October 2004

Formatted: Font: Bold

<i>Term</i>	<i>Definition</i>	<i>Source</i>	<i>Date</i>
Discharge of a TIR operation	The recognition by Customs authorities that the TIR operation has been terminated correctly in a Contracting Party. This is established by the Customs authorities on the basis of a comparison of the data or information available at the Customs office of destination or exit (en route) and that available at the Customs office of departure or entry (en route)	Art. 1 (e)	ExG 26-27 October 2004
Import or export duties and taxes	Customs duties and all other duties, taxes, fees and other charges which are collected on, or in connection with, the import or export of goods, but not including fees and charges limited in amount to the approximate cost of services rendered	Art. 1 (f)	ExG 26-27 October 2004
Person	Both natural and legal persons	Art. 1 (n)	ExG 26-27 October 2004
Heavy or bulky goods	Any heavy or bulky object which because of its weight, size or nature is not normally carried in a closed road vehicle or closed container	Art. 1 (p)	ExG 26-27 October 2004

## Annex III

### Current TIR Carnet data elements records

This annex contains the results of the survey on current TIR Carnet elements, which had been held by the secretariat among participants of the Expert Group in the course of 2002. In the survey, participants had been requested to supply information on each individual data element contained in the paper TIR Carnet.

This Annex presents the amended records, as discussed by and presented to the Expert Group at its second session in Prague. To understand the records correctly, certain premises should be taken into account:

- a) each actor, writing a specific piece of information, is assumed to read it as well;
- b) each actor, writing a specific piece of information, is assumed to validate it as well; in addition, the same information may also be validated by another actor;
- c) updating of information refers to the act of changing data as a result of a certain action or event occurring; after updating, the updated data will have to be validated<sup>18</sup> (ExG/COMP/2002/10, para. 14 and Annex 4).

---

<sup>18</sup> In the course of the session, the issue of distinction between correcting and updating of data was raised, because in the current situation, where the TIR Carnet is filled-in by hand, it may not seem relevant to distinguish between the two actions. In an electronic environment, however, it is important to introduce such distinction because these two actions may take place at different times, which may require or lead to different procedures. Within the context of the data records of Annex 3, updating does NOT include corrections.

### Elaboration of a class diagram – TIR Operation example

On the basis of the requirements contained in Annex 1 of the Reference Model, we will construct the part of the class diagram depicting the TIR operation.

First, we draw the class:

In the list of Requirements, only two requirements deal with the TIR operation:

Req.10 A TIR transport is composed of TIR operations. The number of TIR operations within a TIR transport is at the moment limited to 10 with the current paper system and has a minimum of 2 (these limitations should be extensible; therefore a two to many is more advisable). A TIR operation is part of one and only one TIR transport.

Req. 13 The TIR operation is started at one and only one Customs office and terminated at one and only one Customs office. A Customs office can start and terminate any number of TIR operations.

Requirement 10 first stipulates that *a TIR transport is composed of TIR operations*. UML uses a line terminated by a black diamond to indicate the composition (◆—):

It also states that the number of TIR operations within a TIR transport is at the moment limited to 10 with the current paper system and has a minimum of 2 (these limitations should be extensible; therefore a two to many is more advisable). This is translated in UML by indicating on the TIR operation side of the line “2..\*” (multiplicity). The multiplicity indicates the number of objects participating in the relationship:

Finally, requirement 10 says that *a TIR operation is part of one and only one TIR transport*. This is translated by writing “1” on the TIR transport side of the relationship:

Requirement 13 contains information about two relationships between the classes *TIR Operation* and *Customs Office*. First, we will identify the two relationships, which are called “associations”. Requirement 13 stipulates that *the TIR operation is started at ... Customs office... Start* is therefore the first association between the classes *TIR Operation* and *Customs Office*:

In case the association itself contains information, UML uses a different symbol called “association class”. This is the case for the *Start* association which contains information, such as the starting date of the TIR operation:

The second association, *Termination*, can be identified in Requirement 13: *the TIR operation is... and terminated at ... Customs office*. Following the logic of the previous association, the association is depicted as an association class:

The multiplicities of these two associations are identical. The words *one and only one* indicate that a TIR operation has to start at a Customs office and can not start at more than one. This is translated in UML by inserting “1” on the *Customs Office* side of the association:

In addition, a *Customs office* can start and terminate any number of *TIR operations*. This is translated in UML by inserting “\*” (meaning from zero to any number) on the *TIR operation* side of the association:

Finally, in order to get the full picture of all relationships involving the *TIR operation* class, the sub part of the high level class diagram can be drawn:

When looking at the complete high level diagram, one should not forget the fact that, although all relationships are depicted in one, single diagram, this does not change the way in which each single relationship should be read.

## Annex V

### UMM/UML glossary

Term	Definition	Source
<b>abstract class</b>	A class that cannot be directly instantiated.	<i>Unified Modelling User Guide</i>
<b>abstraction</b>	The essential characteristics of an entity that distinguish it from all other kinds of entities. An abstraction defines a boundary relative to the perspective of the viewer.	<i>Unified Modelling User Guide</i>
<b>activity diagram</b>	Shows behaviour with control structure. Can show many objects over many uses, many objects in single use case, or implementation of method. Encourages parallel behaviour.	<i>UML Distilled</i>
<b>actor</b>	Someone or something, outside the system or business that interacts with the system or business.	<i>Rational Unified Process</i>
<b>aggregation</b>	A special form of association that specifies a whole-part relationship between the aggregate (the whole) and a component (the part).	<i>Unified Modelling User Guide</i>
<b>analysis classes</b>	An abstraction of a role played by a design element in the system, typically within the context of a use-case realization. Analysis classes may provide an abstraction for several role, representing the common behaviour of those roles. Analysis classes typically evolve into one or more design elements (e.g. design classes and/or capsules, or design subsystems).	<i>Rational Unified Process</i>
<b>analysis</b>	The part of the software development process whose primary purpose is to formulate a model of the problem domain. Analysis focuses on what to do, design focuses on how to do it. See design.	<i>Rational Unified Process</i>
<b>API</b>	Application Protocol Interface.	
<b>architecture</b>	The organizational structure of a system. An architecture can be recursively decomposed into parts that interact through interfaces, relationships that connect parts, and constraints for assembling parts. Parts that interact through interfaces include classes, components and subsystems.	<i>Rational Unified Process</i>
<b>artifact</b>	(1) A piece of information that (1) is produced, modified, or used by a process, (2) defines an area of responsibility, and (3) is subject to version control. An artefact can be a model, a model element, or a document. A document can enclose other documents.	<i>Rational Unified Process</i>
<b>association</b>	A structural relationship that describes a set of links, in which a link is a connection among objects; the semantic relationship between two or more classifiers that involves the connections among their instances.	<i>Unified Modelling User Guide</i>
<b>attributes</b>	An attribute defined by a class represents a named property of the class or its objects. An attribute has a type that defines the type of its instances.	<i>Rational Unified Process</i>
<b>binary association</b>	An association between two classes.	<i>Unified Modelling User Guide</i>

<i>Term</i>	<i>Definition</i>	<i>Source</i>
<b>BPAWG</b>	UN/CEFACT Business Process Analysis Working Group. Responsible for analysing and understanding the key elements of international transactions and working for the elimination of constraints.	<i>UN/CEFACT</i>
<b>Boolean</b>	An enumeration whose values are true and false.	<i>Unified Modelling User Guide</i>
<b>business domain model</b>	The first stage in UN/CEFACT unified process.	<i>UMM</i>
<b>business entity class</b>	Group of Items which are structured in the same way: that serves the fundamental missions of the company, that has legal and/or commercial basis, which may participate in exchanges with partners, which will be implemented into objects (object technology) through a modelling process. For example: order is a business entity class.	<i>UMM</i>
<b>business entity</b>	Something that is accessed, inspected, manipulated, produced, and son on in the business.	<i>UMM</i>
<b>business expert</b>	A person who is knowledgeable about the business area being modelled.	<i>UMM</i>
<b>Business Operational View (BOV)</b>	A perspective of business transactions limited to those aspects regarding the making of business decisions and commitments among organizations, which are needed for the description of a business transaction.	<i>(Open-edi Reference Model - ISO/IEC 14662).</i>
<b>business process</b>	The means by which one or more activities are accomplished in operating business practices.	<i>UMM</i>
<b>business rule</b>	Rules, regulations and practices for business.	<i>UMM</i>
<b>business</b>	a series of processes, each having a clearly understood purpose, involving more than one organization, realized through the exchange of information and directed towards some mutually agreed upon goal, extending over a period of time.	<i>(Open-edi Reference Model - ISO/IEC 14662). (MoU)</i>
<b>cardinality</b>	The number of elements in a set.	<i>Unified Modelling User Guide</i>
<b>class</b>	A description of a set of objects that share the same <i>attributes</i> , <i>operations</i> , <i>methods</i> , <i>relationships</i> , and semantics. A class may use a set of interfaces to specify collections of operations it provides to its environment. See: <i>interface</i> .	<i>Rational Unified Process</i>
<b>class diagram</b>	shows static structure of concepts, types, and classes. Concepts show how users think about the world; types show interfaces of software components; classes show implementation of software components. (UML Distilled) A diagram that shows a collection of declarative (static) <i>model elements</i> , such as <i>classes</i> , <i>types</i> , and their contents and <i>relationships</i> . (Rational Unified Process).	<i>UML Distilled/ Rational Unified Process</i>
<b>collaboration</b>	(1) A collaboration diagram describes a pattern of interaction among	<i>Rational Unified</i>

<i>Term</i>	<i>Definition</i>	<i>Source</i>
<b>diagram</b>	objects; it shows the objects participating in the interaction by their links to each other and the <i>messages</i> they send to each other. Unlike a sequence diagram, a collaboration diagram shows the relationships among the instances. Sequence diagrams and collaboration diagrams express similar information, but show it in different ways. See: <i>sequence diagram</i> .	<i>Process</i>
<b>component</b>	A physical, replaceable part of a system that packages implementation and conforms to and provides the realization of a set of interfaces. A component represents a physical piece of implementation of a system, including software code (source, binary or executable) or equivalents such as scripts or command files.	<i>Rational Unified Process</i>
<b>component diagram</b>	A diagram that shows the organizations and dependencies among <i>components</i> .	<i>Rational Unified Process</i>
<b>component interface</b>	A named set of operations that characterize the behaviour of a component.	<i>OMG</i>
<b>composition</b>	A form of aggregation with strong ownership and coincident lifetime of the parts by the whole; parts with nonfixed multiplicity may be created after composite itself, but once created they live and die with it; such parts can also be explicitly removed before the death of a composite.	<i>Unified Modelling User Guide</i>
<b>constraint</b>	A semantic condition or restriction. Certain constraints are predefined in the UML, others may be user defined. Constraints are one of three extensibility mechanisms in UML. See: <i>tagged value</i> , <i>stereotype</i> .	<i>Rational Unified Process</i>
<b>construction</b>	The third phase of the software development life cycle, in which the software is brought from an executable architectural baseline to the point at which it is ready to be transitioned to the user community.	<i>Unified Modelling User Guide</i>
<b>control classes</b>	A class used to model behaviour specific to one, or a several use cases.	<i>Rational Unified Process</i>
<b>datatype</b>	A descriptor of a set of values that lack identity and whose operations do not have side effects. Data types include primitive pre-defined types and user-definable types. Pre-defined types include numbers, string and time. User-definable types include enumerations.	<i>Rational Unified Process</i>
<b>delegation</b>	The ability of an object to issue a message to another object in response to a message.	<i>Unified Modelling User Guide</i>
<b>deliverables</b>	An output from a process that has a value, material or otherwise, to a customer or other stakeholder.	<i>Rational Unified Process</i>
<b>dependency</b>	A semantic relationship between two things in which a change to one thing (the independent thing) may affect the semantics of the other thing (the dependent thing).	<i>Unified Modelling User Guide</i>
<b>deployment diagram</b>	A diagram that shows the configuration of run-time processing nodes and the <i>components</i> , <i>processes</i> , and <i>objects</i> that live on them. Components represent run-time manifestations of code units. See: <i>component diagram</i> .	<i>Rational Unified Process</i>
<b>design</b>	The part of the software development process whose primary purpose is to decide how the system will be implemented. During design, strategic and tactical decisions are made to meet the required functional and quality <i>requirements</i> of a system. See <i>analysis</i> .	<i>Rational Unified Process</i>
<b>design patterns</b>	A specific solution to a particular problem in software design. Design patterns capture solutions that have developed and evolved over time.	<i>Rational Unified Process</i>

<i>Term</i>	<i>Definition</i>	<i>Source</i>
	expressed in a succinct and easily applied form.	<i>Process</i>
<b>design view</b>	The view of a system's architecture that encompasses the classes, interfaces and collaborations that form the vocabulary of the problem and its solution; a design view addresses the functional requirements of a system.	<i>Unified Modelling User Guide</i>
<b>diagram</b>	A graphical depiction of all or part of a <i>model</i> .	<i>Rational Unified Process</i>
<b>Document type definition</b>	See DTD.	
<b>domain</b>	An area of knowledge or activity characterized by a family of related systems.  An area of knowledge or activity characterized by a set of concepts and terminology understood by practitioners in that area.	<i>Rational Unified Process</i>
<b>DTD</b>	Document Type Definition.	
<b>EDI message</b>	An approved, published, and maintained formal description of how to structure the data required to perform a specific business function, in such a way as to allow for the transfer and handling of this data by electronic means.	<i>(MoU)</i>
<b>EDIFACT messages</b>	A electronic message formats based on UN/EDIFACT standard set developed and maintained by the UN/EDIFACT Working Group which are in UN/TDID directories.	<i>UN/CEFACT</i>
<b>edifact working group</b>	To develop and maintain UN/EDIFACT, the support of harmonised implementations and the use of multi-lingual terminology.	
<b>elaboration phase</b>	The second <i>phase</i> of the process where the product <i>vision</i> and its <i>architecture</i> are defined.	<i>Rational Unified Process</i>
<b>electronic business</b>	a generic term covering information definition and exchange requirements within and between enterprises, including customers.	<i>(MoU)</i>
<b>electronic commerce</b>	Electronic Commerce is doing business electronically. This includes the sharing of standardised unstructured or structured business information by any electronic means (such as electronic mail or messaging, World Wide Web technology, electronic bulletin boards, smart cards, electronic funds transfers, electronic data interchange, and automatic data capture technology) among suppliers, customers, governmental bodies and other partners in order to conduct and execute transactions in business, administrative and consumer activities.	<i>UN/CEFACT SIMAC</i>
<b>Electronic Data Interchange (EDI)</b>	The automated exchange of any predefined and structured data for business among information systems of two or more organizations.	<i>(Open-edi Reference Model Standard - ISO/IEC 14662). (MoU)</i>
<b>entity classes</b>	A <i>class</i> used to model information that has been stored by the system, and the associated behaviour. A generic class, reused in many use cases, often with persistent characteristics. An entity class defines a set of entity objects, which participate in several use cases and typically survive those use cases.	<i>Rational Unified Process</i>
<b>enumerations</b>	A list of named values used as the range of a particular <i>attribute</i> type. For example, RGBColor = { red, green, blue }. Boolean is a predefined	<i>Rational Unified Process</i>

<i>Term</i>	<i>Definition</i>	<i>Source</i>
	enumeration with values from the set {false, true}.	<i>Process</i>
<b>EWG</b>	UN/EDIFACT Working Group. To develop and maintain UN/EDIFACT, the support of harmonised implementations and the use of multi-lingual terminology.	
<b>eXtensible Markup Language</b>	See XML.	
<b>Functional Service View (FSV)</b>	A perspective of business transactions limited to those information technology interoperability aspects of IT Systems needed to support the execution of Open-edi transactions.	<i>(MoU)</i>
<b>generalization</b>	A taxonomic relationship between a more general element and a more specific element. The more specific element is fully consistent with the more general element and contains additional information. An instance of the more specific element may be used where the more general element is allowed. See: <i>inheritance</i> .	<i>Rational Unified Process</i>
<b>implementation</b>	A concrete realization of the contract declared by an interface; a definition of how something is constructed or computed.	
<b>inception phase</b>	The first <i>phase</i> of the Unified Process, in which the seed idea, request for proposal, for the previous generation is brought to the point of being (at least internally) funded to enter the <i>elaboration</i> phase.	<i>Rational Unified Process</i>
<b>inheritance</b>	The mechanism by which more specific elements incorporate structure and behaviour of more general elements related by behaviour. See <i>generalization</i> .	<i>Rational Unified Process</i>
<b>instance</b>	An individual entity satisfying the description of a <i>class</i> or <i>type</i> .	<i>Rational Unified Process</i>
<b>interaction diagram</b>	A diagram that shows an interaction, consisting of a set of objects and their relationships, including the messages that may be dispatched among them; interaction diagrams address the dynamic view of a system; a generic term that applies to several types of diagrams that emphasize object interactions, including collaboration diagrams, sequence diagrams and activity diagrams.	<i>Unified Modelling User Guide</i>
<b>interface</b>	A collection of <i>operations</i> that are used to specify a service of a <i>class</i> or a <i>component</i> . A named set of operations that characterize the behaviour of an element.	<i>Rational Unified Process</i>
<b>ISO</b>	The International Organization for Standardization.	
<b>Messages</b>	A specification of the conveyance of information from one instance to another, with the expectation that activity will ensue. A message may specify the raising of a signal or the call of an operation.	<i>Rational Unified Process</i>
<b>messaging protocols</b>	See Messages and Protocol.	
<b>Metaclass</b>	A class whose instances are classes. Metaclasses are typically used to construct <i>metamodels</i> .	
<b>Metamodel</b>	A model that defines the language for expressing a <i>model</i> .	<i>Rational Unified Process</i>
<b>metaobjects</b>	A generic term for all metaentities in a metamodeling language. For example, metatypes, metaclasses, metaattributes, and metaassociations.	<i>Rational Unified Process</i>

<i>Term</i>	<i>Definition</i>	<i>Source</i>
<b>method</b>	(1) A regular and systematic way of accomplishing something; the detailed, logically ordered plans or procedures followed to accomplish a task or attain a goal. (2) UML 1.1: The implementation of an operation, the algorithm or procedure that effects the results of an operation.  The implementation of an operation. It specifies the algorithm or procedure associated with an operation.	<i>Rational Unified Process</i>
<b>methodology</b>	the science of method. A body of methods used in a particular branch of activity.	<i>COD</i>
<b>model</b>	A semantically closed abstraction of a system. In the Unified Process, a complete description of a system from a particular perspective ('complete' meaning you don't need any additional information to understand the system from that perspective); a set of model elements. Two models cannot overlap.  A semantically closed abstraction of a subject system. See: <i>system</i> .  Usage note: In the context of the MOF specification, which describes a <i>meta-metamodel</i> , for brevity the meta-metamodel is frequently referred to as simply the model.	<i>Rational Unified Process</i>
<b>modelling tools</b>	any device or implement used to carry out modeling whether manually or by a machine.	<i>COD</i>
<b>naming</b>	to give a string used to identify a <i>model element</i> .	<i>Rational Unified Process</i>
<b>n-ary association</b>	An association among three or more classes.	<i>Unified Modelling User Guide</i>
<b>note</b>	One of model elements which is a figure symbol to express an element in a diagram.	<i>UML Toolkit</i>
<b>object diagram</b>	A diagram that encompasses <i>objects</i> and their relationships at a point in time. An object diagram may be considered a special case of a class diagram or a collaboration diagram. See: <i>class diagram</i> , <i>collaboration diagram</i> .	<i>Rational Unified Process</i>
<b>Object Oriented Approach</b>	The development of classes of business objects may support and have an impact on the developments in the area of simplification of EDI and its standards. A business object is a true representation of a tangible concept stemming from real business usage.	
<b>objects</b>	An entity with a well-defined boundary and identity that encapsulates <i>state</i> and <i>behaviour</i> . State is represented by <i>attributes</i> and <i>relationships</i> , behavior is represented by <i>operations</i> , <i>methods</i> , and <i>state machines</i> . An object is an instance of a class. See: <i>class</i> , <i>instance</i> .	<i>Rational Unified Process</i>
<b>OCL</b>	Object Constraints Language; a formal language used to express side effect-free constraints.	<i>Unified Modelling User Guide</i>
<b>OO-edi</b>	Object Oriented edi.	
<b>Open-edi</b>	electronic data interchange among multiple autonomous organizations to accomplish an explicit shared business goal according to Open-edi standards (i.e. that complies with the Open-edi Reference Model Standard -	<i>(MoU)</i>

<i>Term</i>	<i>Definition</i>	<i>Source</i>
	ISO/IEC 14662).	
<b>operation signature</b>	See Operation and Signature.	
<b>operation</b>	A service that can be requested from an object to effect behaviour. An operation has a <i>signature</i> , which may restrict the actual parameters that are possible.	<i>Rational Unified Process</i>
<b>package</b>	A general purpose mechanism for organizing elements into groups. Packages may be nested within other packages.	<i>Rational Unified Process</i>
<b>package diagram</b>	shows groups of classes and dependencies among them.	<i>UML Distilled</i>
<b>parameter</b>	The specification of a variable that can be changed, passed, or returned.	<i>Unified Modelling User Guide</i>
<b>patterns</b>	offers useful bits of analysis, design, and coding techniques. Good examples to learn from; starting point for designs.	<i>UML Distilled</i>
<b>phases</b>	The time between two major project milestones, during which a well-defined set of objectives is met, artefacts are completed, and decisions are made to move or not move into the next phase.	<i>Rational Unified Process</i>
<b>process view</b>	The view of a system's architecture that encompasses the threads and processes that form the system's concurrency and synchronization mechanisms; a process view addresses the performance, scalability and throughput of the system.	<i>Unified Modelling User Guide</i>
<b>projects</b>	a plan; a scheme. A planned undertaking. A long-term task undertaken by a student to be submitted for assessment.	<i>COD</i>
<b>protocol</b>	A specification of a compatible set of messages used to communicate between <i>capsules</i> . The protocol defines a set of incoming and outgoing messages types (e.g. operations, signals), and optionally a set of sequence diagrams which define the required ordering of messages and a state machine which specifies the abstract behaviour that the participants in a protocol must provide.	<i>Rational Unified Process</i>
<b>prototype</b>	A release that is not necessarily subject to <i>change management</i> and <i>configuration control</i> .	<i>Rational Unified Process</i>
<b>register</b>	an official list in which items are recorded for reference (list of elementary data in which the meaning –i.e. semantics- of these data is defined).	
<b>Registry</b>	a place where registers are kept.	
<b>Relationship</b>	A semantic connection among model elements. Examples of relationships include <i>associations</i> and <i>generalizations</i> .	<i>Rational Unified Process</i>
<b>repository</b>	Electronic store of structured information (such as EDIFACT messages, X12 messages, XML messages).	
<b>requirement</b>	A desired feature, property or behaviour of a system.	<i>Unified Modelling User Guide</i>
<b>re-use</b>	Further use or repeated use of an <i>artefact</i> .	<i>Rational Unified Process</i>

<i>Term</i>	<i>Definition</i>	<i>Source</i>	
<b>scenario</b>	A formal specification of a class of business activities having the same business goal.	<i>(ISO 19735 part I)</i>	
<b>schema</b>	In the context of the MOF (Metadata Object Facility), a schema is analogous to a <i>package</i> which is a container of <i>model elements</i> . Schema corresponds to an MOF package. Contrast: <i>metamodel</i> , package corresponds to an MOF package.	<i>Rational Unified Process</i>	Formatted: Default Paragraph Font
<b>scope</b>	the extent to which it is possible to range; the opportunity for action etc.	<i>COD</i>	Formatted: Default Paragraph Font
<b>semantics</b>	relating to meaning in language; relating to the connotations of words.	<i>COD</i>	
<b>sequence diagram</b>	A diagram that shows object interactions arranged in time sequence. In particular, it shows the objects participating in the interaction and the sequence of messages exchanged. Unlike a collaboration diagram, a sequence diagram includes time sequences but does not include object relationships. A sequence diagram can exist in a generic form (describes all possible <i>scenarios</i> ) and in an instance form (describes one actual scenario). Sequence diagrams and collaboration diagrams express similar information, but show it in different ways. See: <i>collaboration diagram</i> .	<i>Rational Unified Process</i>	Formatted: Default Paragraph Font
<b>signature</b>	The name and parameters of a behavioural feature. A signature may include an optional returned parameter.	<i>Rational Unified Process</i>	Formatted: Default Paragraph Font
<b>Simpl-EDI</b>	Subsets of UN/EDIFACT messages especially designed for SMEs. Simpl-EDI (Simple Electronic Business) defines simplest processes and their required core data allowing the exchange of the minimum data to effect a business transaction electronically.	<i>UN/CEFACT SIMAC</i>	
<b>software developer</b>	A person responsible for developing a software in accordance with project-adopted standards and procedures. This can include performing activities in any of the <i>requirements, analysis &amp; design, implementation, and test</i> workflows.	<i>Rational Unified Process</i>	Formatted: Default Paragraph Font
<b>software solution</b>	the act or a means of solving a problem or difficulty using a software.	<i>COD</i>	Formatted: Default Paragraph Font
<b>specification</b>	A declarative description of what something is or does. Contrast: <i>implementation</i> .	<i>Rational Unified Process</i>	Formatted: Default Paragraph Font
<b>stakeholder</b>	An individual who is materially affected by the outcome of the system.	<i>Rational Unified Process</i>	Formatted: Default Paragraph Font
<b>state diagram</b>	shows how single object behaves across many use cases.	<i>UML Distilled</i>	
<b>state machine</b>	A state machine specifies the behaviour of a <i>model element</i> , defining its response to events and the life cycle of the object.  A behaviour that specifies the sequences of <i>states</i> that an object or an interaction goes through during its life in response to events, together with its responses and actions.	<i>Rational Unified Process</i>	Formatted: Default Paragraph Font
<b>statechart (state machine) diagram</b>	A diagram that shows a state machine. See: <i>state machine</i> .	<i>Rational Unified Process</i>	Formatted: Default Paragraph Font
<b>states</b>	A condition or situation during the life of an object during which it satisfies some condition, performs some activity, or waits for some event. Contrast: state [OMA].	<i>Rational Unified Process</i>	

<i>Term</i>	<i>Definition</i>	<i>Source</i>
<b>stereotype</b>	A new type of modelling element that extends the semantics of the metamodel. Stereotypes must be based on certain existing types or classes in the metamodel. Stereotypes may extend the semantics, but not the structure of pre-existing types and classes. Certain stereotypes are predefined in the UML, others may be user defined. Stereotypes are one of three extensibility mechanisms in UML. See: constraint, tagged value.	<i>OMG</i>
<b>sub-domain</b>	An lower area of knowledge or activity characterized by a family of related systems contained by a domain.	
<b>swimlane</b>	A partition on an interaction diagram for organizing responsibilities for actions.	<i>Unified Modelling User Guide</i>
<b>syntax rules</b>	rules governing the structure of an interchange and its functional groups, messages, segments and data elements.	<i>(ISO 9735)</i>
<b>system</b>	As an instance, an executable configuration of a software application or software application family; the execution is done on a hardware platform. As a class, a particular software application or software application family that can be configured and installed on a hardware platform. In a general sense, an arbitrary system instance.  1. A collection of connected units that are organized to accomplish a specific purpose. A system can be described by one or more models, possibly from different viewpoints. Synonym: physical system. 2. A top-level subsystem.	<i>Rational Unified Process</i>
<b>templates</b>	A pre-defined structure for an <i>artefact</i> . Synonym: <i>parameterized element</i> .	<i>Rational Unified Process</i>
<b>test</b>	A <i>core process workflow</i> in the software-engineering process whose purpose is to integrate and test the system.	<i>Rational Unified Process</i>
<b>TMWG</b>	UN/CEFACT Techniques and Methodologies Group. To research and identify techniques and methodologies which could be utilised by CEFACT and its working groups to enhance the process by which its deliverables are produced and integrated.	
<b>traceability</b>	The ability to trace a project element to other related project elements, especially those related to <i>requirements</i> .	<i>Rational Unified Process</i>
<b>transition phase</b>	The fourth <i>phase</i> of the process in which the software is turned over to the user community; a relationship between two states indicating that an object in the first state will perform certain actions and enter the second state when a specified event occurs and conditions are satisfied.	<i>Unified Modelling User Guide</i>
<b>type</b>	Description of a set of entities which share common characteristics, relations, attributes, and semantics.  A stereotype of class that is used to specify a domain of instances (objects) together with the operations applicable to the objects. A type may not contain any methods. See: <i>class</i> , <i>instance</i> . Contrast: <i>interface</i> .	<i>Rational Unified Process</i>
<b>UML</b>	See Unified Modelling Language.	
<b>UN/EDIFACT</b>	(United Nations Electronic Data Interchange for Administration, Commerce and transport): "User application protocol, for use within user application systems for data to be interchanged, compatible with the OSI model."	<i>(UN/EDIFACT syntax implementation guidelines,</i>

<i>Term</i>	<i>Definition</i>	<i>Source</i>
		UNTDID 1990). (MoU)
<b>Unified Modeling Language (UML)</b>	a set of diagrams that communicate requirements regarding a business process.	
<b>use case</b>	The specification of a sequence of actions, including variants, that a system (or other entity) can perform, interacting with <i>actors</i> of the system. See: <i>use-case instances</i> . A use-case class contains all main, alternate flows of events related to producing the 'observable result of value'. Technically, a use-case is a class whose instances are <i>scenarios</i> .	Rational Unified Process
<b>use-case analysis</b>	The part of the software development process using use case methodology whose primary purpose is to formulate a model of the problem <i>domain</i> . Analysis focuses on what to do, design focuses on how to do it.	
<b>use-case diagram</b>	A diagram that shows the relationships among <i>actors</i> and <i>use cases</i> within a system.	Rational Unified Process
<b>use-case instance</b>	A sequence of actions performed by a system that yields an observable result of value to a particular actor.	Rational Unified Process
<b>use-case model</b>	A model that describes a system's functional <i>requirements</i> in terms of <i>use cases</i> .	
<b>use-case realization</b>	A use-case realization describes how a particular use case is realized within the <i>design model</i> , in terms of collaborating objects.	Rational Unified Process
<b>use-case view</b>	An <i>architectural view</i> that describes how critical use cases are performed in the system, focusing mostly on architecturally significant components (objects, tasks, nodes). In the Unified Process, it is a view of the <i>use-case model</i> .	Rational Unified Process
<b>view elements</b>	A view element is a textual and/or graphical projection of a collection of <i>model elements</i> .	Rational Unified Process
<b>view</b>	A simplified description (an abstraction) of a model, which is seen from a given perspective or vantage point and omits entities that are not relevant to this perspective. See also <i>architectural view</i> .	Rational Unified Process
<b>workflow</b>	A sequence of activities in the Rational Unified Modelling Methodology.	
<b>XML (eXtensible Markup Language)</b>	XML is designed to enable the exchange of information (data) between different applications and data sources on the World Wide Web. XML is a simplified subset of the Standard Generalized Markup Language (SGML). XML allows construction of structured data (trees) which rely on composition relationships. XML schemas are used to define data models.	UN/CEFACT SIMAC

## Annex VI

### eTIR declaration mechanism DECLARATION MECHANISM

Chapter 2.1.2.4.2, stipulates “that the holder submits the declaration by electronic means to the Customs office of departure, making reference to a guarantee issued by a guarantee chain, using authentication mechanisms. The declaration shall be submitted prior to the presentation of the goods at the Customs office of departure. Customs authorities shall, if satisfied, validate and accept the declaration and transmit it to the eTIR international system. The eTIR international system forwards this information to the following Customs authorities involved in the transport.”<sup>19/</sup>

The declaration mechanism envisages that the holder sends his advance cargo information<sup>20/</sup> only to the Customs office of departure of the TIR transport. The Customs office of departure uses this information when the holder lodges his Customs declaration. The holder actually lodges the Customs declaration by presenting Customs with the reference to the guarantee which he has obtained from the guarantee chain and which he has included in the advance cargo information. The Customs office of departure after having accepted the Customs declaration, registers the information contained in the declaration together with other TIR transport information (e.g. the information on seals) as advance cargo information in the eTIR international system. The eTIR international system forwards the advance cargo information to all Customs authorities declared by the holder as part of his itinerary. This mechanism is devised to facilitate the submission procedure by the holder, without further complicating the procedure for Customs authorities that would in any case have to exchange information concerning TIR transports. This mechanism is similar to the current paper based procedure, where the TIR Carnet becomes a Customs document from the moment the first Customs office of departure stamps each and every page of the TIR carnet. The difference lies in the transportation of the information, which is performed by the truck driver today and will be performed by the eTIR international system tomorrow.

The fact that the holder is obliged to provide Customs with advance cargo information does not relieve him from his responsibility to lodge his declaration by presenting himself, together with the goods vehicle and the reference to the guarantee, in accordance with Article 21 of the TIR Convention. It is then the responsibility of Customs to accept the declaration.

#### **1. The eTIR declaration at the first Customs office of departure**

Figure 1 describes all steps related to the declaration submission process at the first Customs office of departure. Steps are numbered and described in the text following the figure.

<sup>19/</sup> The eTIR system maintains the principle that a TIR transport consists of a set of TIR operations. See Annex 1 of the eTIR Reference Model, Requirement 10.

<sup>20/</sup> The holder, at any time, can verify the integrity of the advance cargo information by means of a ‘key’ which has been generated on the basis of these data.

Figure VI.1

**Declaration at the first Customs office of departure**

1. The holder requests a guarantee from the guarantee chain;
2. The guarantee chain accepts the request and registers the guarantee with the eTIR international system;
3. The eTIR international system acknowledges registration of the guarantee;
4. The guarantee chain provides the holder with a unique reference to the guarantee;
5. After having generated the “key” to ensure the integrity of the advance cargo information, the holder sends the advance cargo information to the Customs office of departure or to a central Customs system in the country of departure, using a national declaration mechanism (outside scope of the eTIR project);<sup>21/</sup>
6. As part of their risk analysis, Customs authorities check the validity of the guarantee in the eTIR international system;
7. The eTIR international system queries the ITDB to check that the holder is authorized;
8. The ITDB provides information on the holder to the eTIR international system;
9. The eTIR international system provides the information on holder and guarantee to Customs;

<sup>21/</sup> A standardized set of data, constituting the advance cargo information, will be defined as part of the eTIR Project.

Formatted: Left, Indent: Left: 2 cm

Formatted: \_ Single Txt\_G, Left, Indent: Left: 0 cm, First line: 0 cm, Space After: 0 pt

10. Customs confirm the reception and the validity of the advance cargo information to the holder and provide him with a unique reference;
11. Customs store the advance cargo information in their internal system, possibly together with the results of their risk assessment;
12. The holder presents the vehicle, the goods and the reference to the guarantee (or the reference provided by Customs) to the Customs office of departure to lodge the declaration;
13. The Customs office of departure retrieves from the national Customs system the data contained in the advance cargo information message to become the Customs declaration, allowing the holder to verify the integrity of the data by comparing the “key” of the declaration with the one originally generated. Then, Customs check the vehicle and goods against the Customs declaration in accordance with the appropriate risk assessment information;
14. The Customs office of departure inspects and seals the vehicle;
15. The results of the checks and the seals numbers are stored in the Customs system;
16. The Customs office of departure (national system) informs the eTIR international system that it accepts the guarantee;
17. The eTIR international system queries the ITDB on the status <sup>22/</sup> of the holder to whom the guarantee has been issued;
18. The ITDB returns the status of the holder to the eTIR international system;
19. The eTIR international system confirms the acceptance of the guarantee to the national Customs system;
20. After having accepted the declaration, the national system forwards the relevant TIR transport data (Customs declaration and the seals numbers) to the eTIR international system by means of the “Record Consignment” message; <sup>23/</sup>
21. The eTIR international system confirms the reception of the information;
22. The eTIR international system provides all Customs administrations involved in the TIR transport with the TIR transport information. This information, exchanged in a Customs secure environment, will serve as the advance cargo information for the subsequent Customs authorities;
23. The Customs officer sees the results on his/her screen and prints the accompanying document;
24. The Customs officer hands out the paper accompanying document to the holder.

## **2. The eTIR declaration at the Customs office of entry**

Figure 2 describes all steps related to the declaration submission process at the Customs office of entry. Steps are numbered and described in the text following the figure.

<sup>22/</sup> The status of the holder refers to his status as contained in the ITDB, i.e. authorized, withdrawn, excluded (art. 38), end of activity.

<sup>23/</sup> Customs perform other activities in line with national or international requirements, such as sending a “Start TIR operation” message (which triggers a checking of the guarantee before the TIR operation can be started). However, as this is not part of the declaration submission mechanism but rather follows the acceptance of the declaration by Customs, it is not further described in this document.

Formatted: \_ H\_1\_G, Space After: 0 pt

Formatted: \_ Single Txt\_G, Left, Space After: 0 pt

Formatted: Font: Bold

Figure VI.2

**Declaration at the Customs office of entry**

1. Customs authorities along the itinerary receive the advance cargo information from the eTIR international system, indicating that a holder is performing a TIR transport which will enter their territory (see step 22 of the Customs office of departure: such information might be just a message, inviting Customs to query the eTIR international system or the TIR transport information);

2. As part of their risk analysis, Customs authorities check the validity of the guarantee with the eTIR international system;

3. The eTIR international system queries the ITDB to check that the holder is authorized;

4. The ITDB provides information on the holder to the eTIR international system;

5. The eTIR international system provides the information on holder and guarantee to Customs;

6. Customs store the advance cargo information in their national system, possibly together with the results of their risk assessment;

7. The holder presents the sealed vehicle (containing the goods) together with the accompanying document and the guarantee reference at the Customs office of entry en route;

8. The Customs office of entry en route retrieves from the national Customs system the data contained in the advance cargo information message to become the Customs declaration, allowing the holder to verify the integrity of the data by comparing the "key" of the declaration with the one originally generated.<sup>24/</sup>

<sup>24/</sup> After accepting the declaration, Customs perform other activities in line with national or international requirements, such as sending a "Start TIR operation" message (which triggers a checking of the guarantee before the TIR operation can be started). However, as this is not part of the declaration submission mechanism but rather follows the acceptance of the declaration by Customs, it is not further described in this document.

Formatted: Font: Bold

Formatted: Left, Indent: Left: 2 cm

Formatted: \_ Single Txt\_G, Left, Indent: Left: 0 cm, First line: 0 cm, Space After: 0 pt

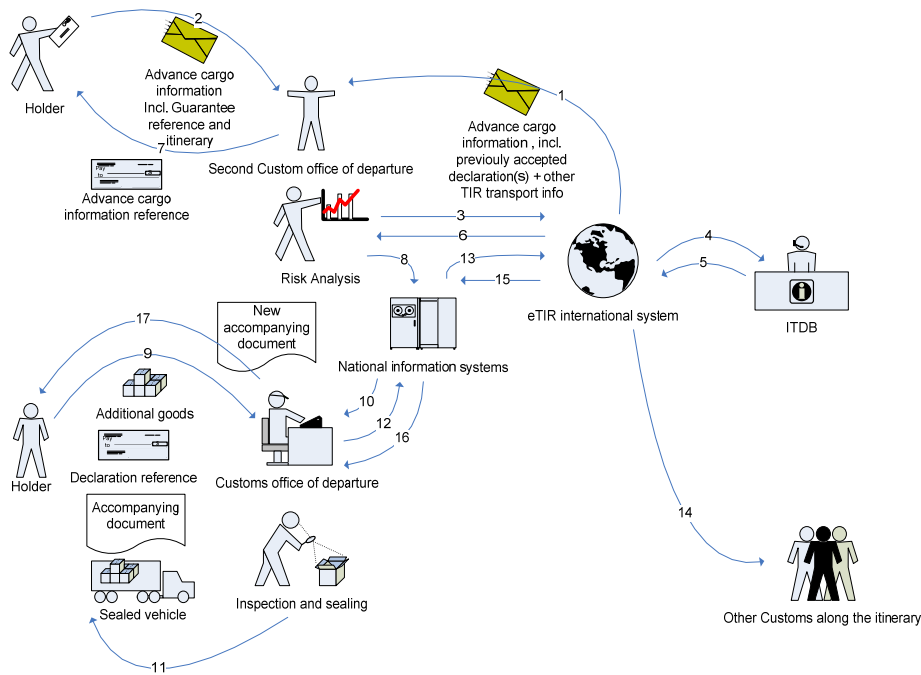

12. In case the geographical distance between the Customs office of departure and the Customs office of entry en route is too close to meet deadlines<sup>25/</sup> for the submission of advance cargo information, Customs authorities at the Customs office of entry en route should accept the advance cargo information forwarded through the eTIR international system. In a computerized environment, even short time lags are sufficient to perform automatic risk assessment and should allow for adequate channelling of the holder upon his arrival at the border. This does not release the holder from his obligation to submit advance cargo information to any Customs authorities when specific national legislation requires him to do so.

### 3. The eTIR declaration at the following Customs offices of departure

Figure 3 describes all steps related to of the declaration submission process at a Customs office of departure, other than the first Customs office of departure, in case of multiple loading places. Steps are numbered and described in the text following the figure.

Figure VI.32

#### Declaration at the following Customs offices of departure

1. The eTIR international system sends the advance cargo information to the Customs authorities along the itinerary (see step 22 at the first Customs office of departure);

<sup>25/</sup> Specific deadlines regarding the arrival of advance information will be defined in the legal provisions allowing for the implementation of the eTIR system.

Formatted: \_ Single Txt\_G, Left, Space After: 0 pt

Formatted: Left, Indent: Left: 2 cm

Formatted: \_ Single Txt\_G, Left, Indent: Left: 0 cm, First line: 0 cm, Space After: 0 pt

Formatted: Font: Bold

2. After having generated the “key” to ensure the integrity of the advance cargo information, the holder sends the advance cargo information, regarding the totality of the goods, to the Customs office of departure or to a central Customs system in the country of departure, using a national declaration mechanism (outside scope of the eTIR project);
3. As part of their risk analysis, Customs authorities check the validity of the guarantee with the eTIR international system;
4. The eTIR international system queries the ITDB to check that the holder is authorized;
5. The ITDB provides information on the holder to the eTIR international system;
6. The eTIR international system provides the information on holder and guarantee to Customs;
7. Customs confirm the reception and the validity<sup>26/</sup> of the advance cargo information regarding the additional goods to be loaded to the holder and provide him with a unique reference;
8. Customs store the advance cargo information in their internal system, possibly together with the results of their risk assessment;
9. The holder presents the sealed vehicle (containing goods loaded at previous loading points), together with the accompanying document. Moreover, he presents the additional goods to be loaded, together with the reference to the guarantee (or the reference provided by Customs) to the Customs office of departure to lodge the declaration;
10. The Customs office of departure retrieves from the national Customs system the data contained in the advance cargo information message to become the Customs declaration, allowing the holder to verify the integrity of the data by comparing the “key” of the declaration with the one originally generated. Then, Customs check the vehicle and goods against the Customs declaration in accordance with the appropriate risk assessment information;
11. Customs retrieves the advance cargo information from the Customs system, possibly together with the results of their risk assessment;
12. Customs remove the seals, inspect the goods and the vehicle according to the results of the risk analysis and, after the additional good are loaded, seal the vehicle;
13. The results of the checks and the seals numbers are stored in the Customs system;
14. After having accepted the declaration, the national system forwards the relevant TIR transport data (Customs declaration and the seals numbers) to the eTIR international system by means of the “Update Consignment” message;<sup>27/</sup>
15. The eTIR international system confirms the reception of the information;
16. The eTIR international system provides all Customs administrations involved in the TIR transport with the TIR transport information. This information, exchanged in a

---

<sup>26/</sup> As part of the verification procedure, Customs also verify that the information provided at the first loading point (received through the eTIR international system) is contained in the new advance cargo information message.

<sup>27/</sup> Customs perform other activities in line with national or international requirements, such as sending a “Start TIR operation” message (which triggers a checking of the guarantee before the TIR operation can be started). However, as this is not part of the declaration submission mechanism but rather follows the acceptance of the declaration by Customs, it is not further described in this document.

Customs secure environment, will serve as the advance cargo information for the subsequent Customs authorities;

17. The Customs officer sees the results on his/her screen and prints the accompanying document;

18. The Customs officer hands out the paper accompanying document to the holder.

In case the geographical distance between the first and the second Customs office of departure is too close to meet deadlines<sup>28/</sup> for the submission of advance cargo information, Customs authorities at the second Customs office of departure should accept the advance cargo information forwarded through the eTIR international system. In a computerized environment, even short time lags are sufficient to perform automatic risk assessment and should allow for adequate channelling of the holder upon his arrival at the border. This does not release the holder from his obligation to submit advance cargo information to any Customs authorities when specific national legislation requires him to so.

#### **4. REMARKS**

In addition to the procedural aspects explained above, the Working Party may also wish to consider the following remarks related to the eTIR declaration mechanism.

##### **A. Submission of the declaration in foreign countries**

A major issue with regard to the declaration submission procedure as contained in the eTIR Project seems to be the requirement for the holder to send advance cargo information to Customs administrations in other countries than the holder's country of residence. The responsibility to provide an adequate submission procedure lies at the national level and is a matter between the holder and the Customs authorities, falling outside the scope of the eTIR Project. The eTIR project only provides for a standard set of elements to be contained in the advance cargo information message, since these elements are also part of the TIR transport information to be exchanged internationally through the eTIR international system.

Although there is general agreement that the requirement of a national electronic declaration system does not pose a problem in the relationship between holder and Customs authorities of the country in which he is established or resident, there seems, however, to be confusion as to how the holder can establish secure electronic communications with Customs authorities in other countries where the beginning of the TIR transport could take place, without having to call upon the paid services of a Customs broker or any other third party. In order to achieve this, Customs administrations will have to ensure not only that their national declaration submission system is accessible by all holders, but that it is also available in, at least, one of the three official languages of the TIR Convention (English, French or Russian). A generalized use of standard codes will further simplify this issue.

##### **B. Comparison with the current paper environment**

The declaration mechanism contained in the eTIR Project only differs slightly from the current paper-based procedure. The declaration continues to be formally lodged by the holder at the time he presents himself at the Customs office of departure or entry en route, together with the vehicle and the goods. However, the eTIR system introduces, as new

<sup>28/</sup> Specific deadlines regarding the arrival of advance information will be defined in the legal provisions allowing for the implementation of the eTIR system.

Formatted: Font: Bold

requirement, that Customs should receive advance cargo information prior to the physical presentation of the vehicle and goods at the Customs office of departure or entry en route. In line with the objectives of the eTIR Project, the purpose of this is to allow Customs to perform certain checks (including the validity of the guarantee) and to determine the risk profile of the TIR transport prior to its arrival at the Customs office concerned. In continuation, the eTIR system is designed in such a way that the holder only needs to submit his advance cargo information once, thus avoiding the multiple, unsolicited and, possibly even erroneous, submission to various national Customs systems. The Customs office of departure, by registering all relevant TIR transport information in the eTIR international system, ensures that the data required for lodging the declaration, as well as other TIR transport information (e.g. seals), are provided to all consecutive countries involved in the TIR transport prior to the arrival of the vehicle so that Customs can perform advance risk assessment. As it is the case today, the holder remains responsible for the presentation of the vehicle, load and guarantee reference in accordance with the principles set out in Article 21 of the TIR Convention at each Customs office. The change in the procedure regards only the information required to lodge the declaration, which is currently provided by means of the TIR Carnet and which will be provided electronically in the future by means of the mechanisms described above.

### **C. Legal implications of the eTIR declaration submission mechanism**

In the course of the discussions of the WP.30 at its 119th session, issues have been raised of a legal nature, which go beyond the scope of the mandate of the GE.1, but which deserve the Working Party's full attention. In the following paragraphs, the secretariat provides its preliminary assessment of the issues at stake for consideration by WP.30.

#### **a. Legal basis for Customs to receive/send/use advance declaration data through the eTIR international system**

It goes without saying that the introduction of the eTIR system will require a revision of the legal provisions of the TIR Convention. In the framework of this revision, it will be necessary to include provisions ensuring that the eTIR international system is adequately defined as the cornerstone of the information exchange between Customs authorities and providing a legal basis for a secure electronic exchange of TIR data, which would replace the current exchange of information based on the paper TIR Carnet.

#### **b. Liability of the holder if an error occurs in the course of the transmission of data from Customs to Customs through the eTIR international system**

First of all, it should be stressed that the holder is and will remain responsible, and thus liable, for the accuracy and the completeness of the information he provides. The eTIR system nevertheless provides the holder with means to ensure the authenticity of the information. The eTIR system foresees that the holder generates a "key" using his advance cargo information.<sup>29/</sup> The Customs authorities will also calculate the "key", from the information they received directly from the holder or through the eTIR international system, and therefore provide the holder with a quick mean to ensuring that the correct information has been considered. With that in mind, it is the responsibility of the holder to ensure there is no divergence between data he submitted, data transmitted via the eTIR

<sup>29/</sup> In more technical terms this key is also known as hash code. A "hash" function takes information as an input and provides the hash code as an output. Whenever the information, e.g. the advance cargo information, is changed the resulting hash code will also change. Therefore, the hash code can ensure that the information provided by the holder is not changed in the course of the TIR transport.
