

Direct submission of declarations to all countries along the itinerary of a TIR transport

André Sceia

UNECE - Transport division - TIR Secretariat

**WP.30, 136th session, Geneva
4 February 2014**

Overview

- Background
- eTIR computerization status
- eTIR main principles
- Declaration mechanism
- Identified issues
- Alternative solution
- Consequences
- WP.30 recommendation

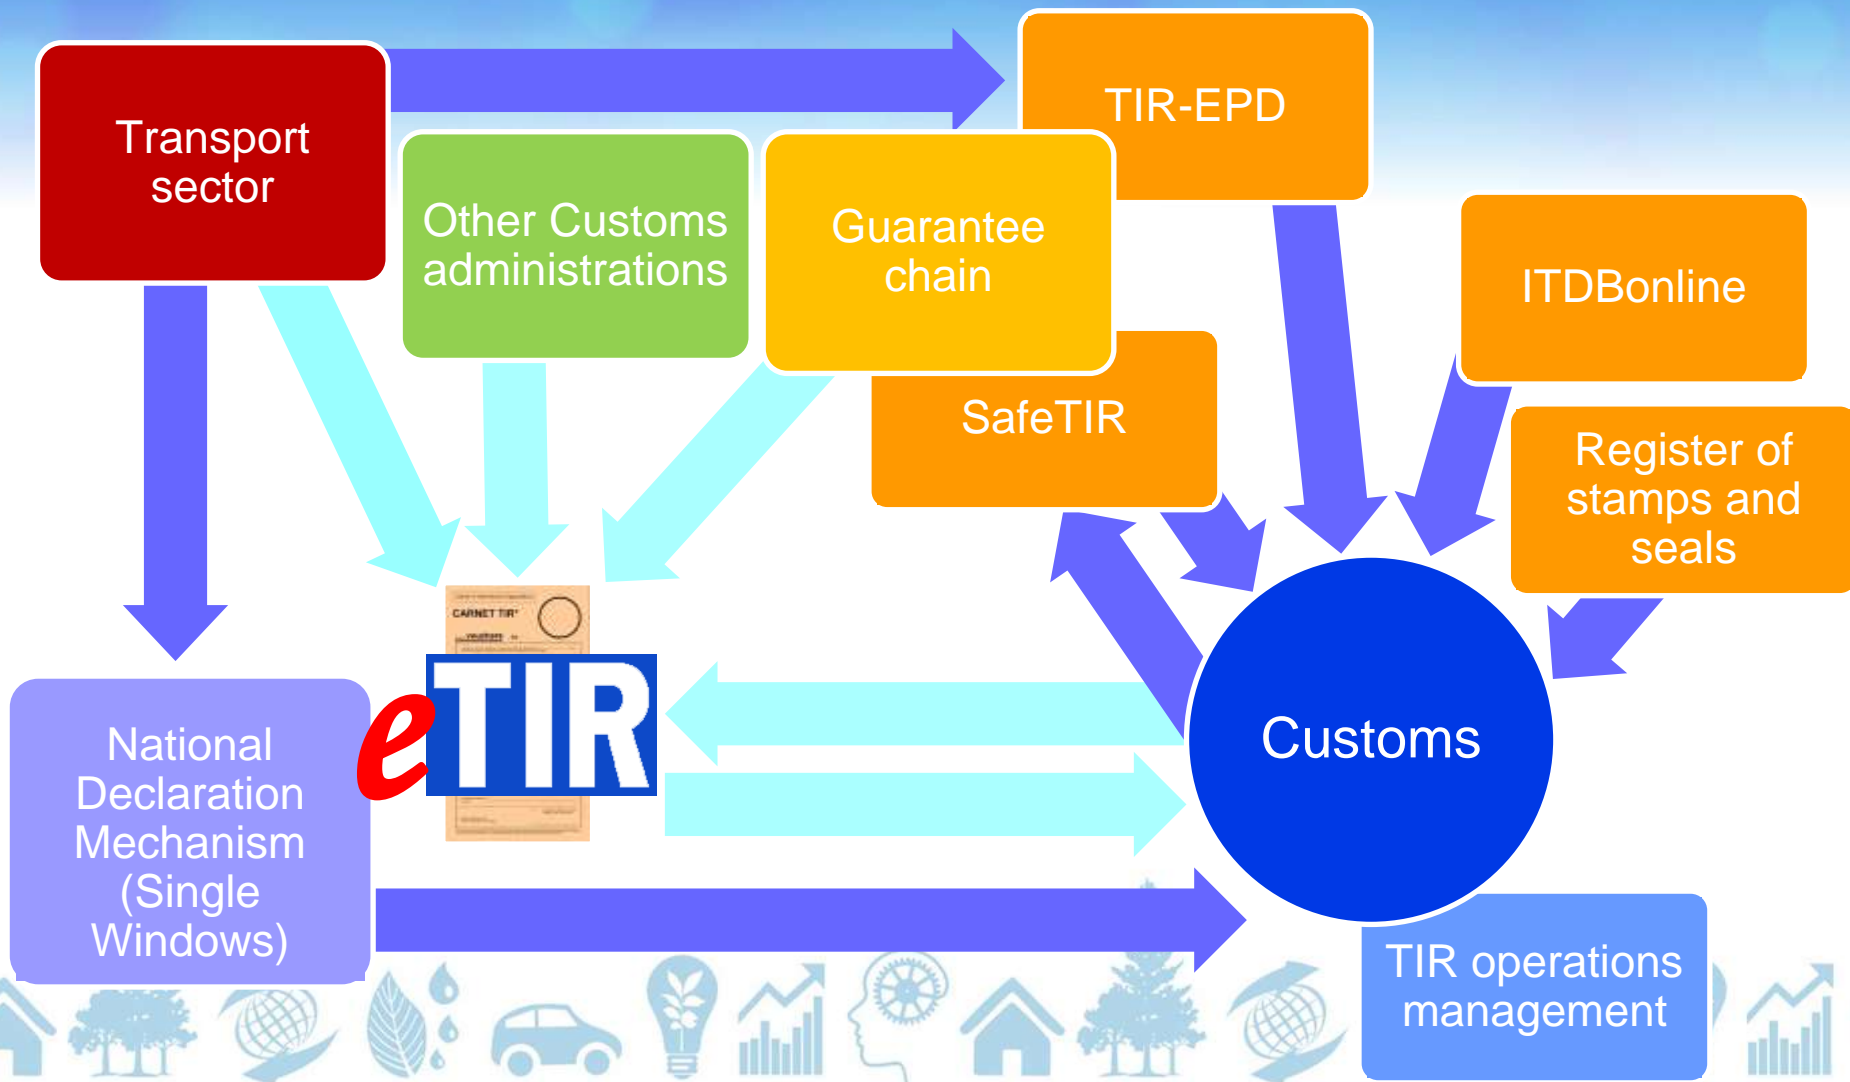

Background

- GE.1 23rd session - 2 potential issues:
 - Difficult to standardize safety and security data requirements
 - Integrity of the declaration (UNEDIFACT)
- **→ *Informal Document WP.30 (2014) No. 3***

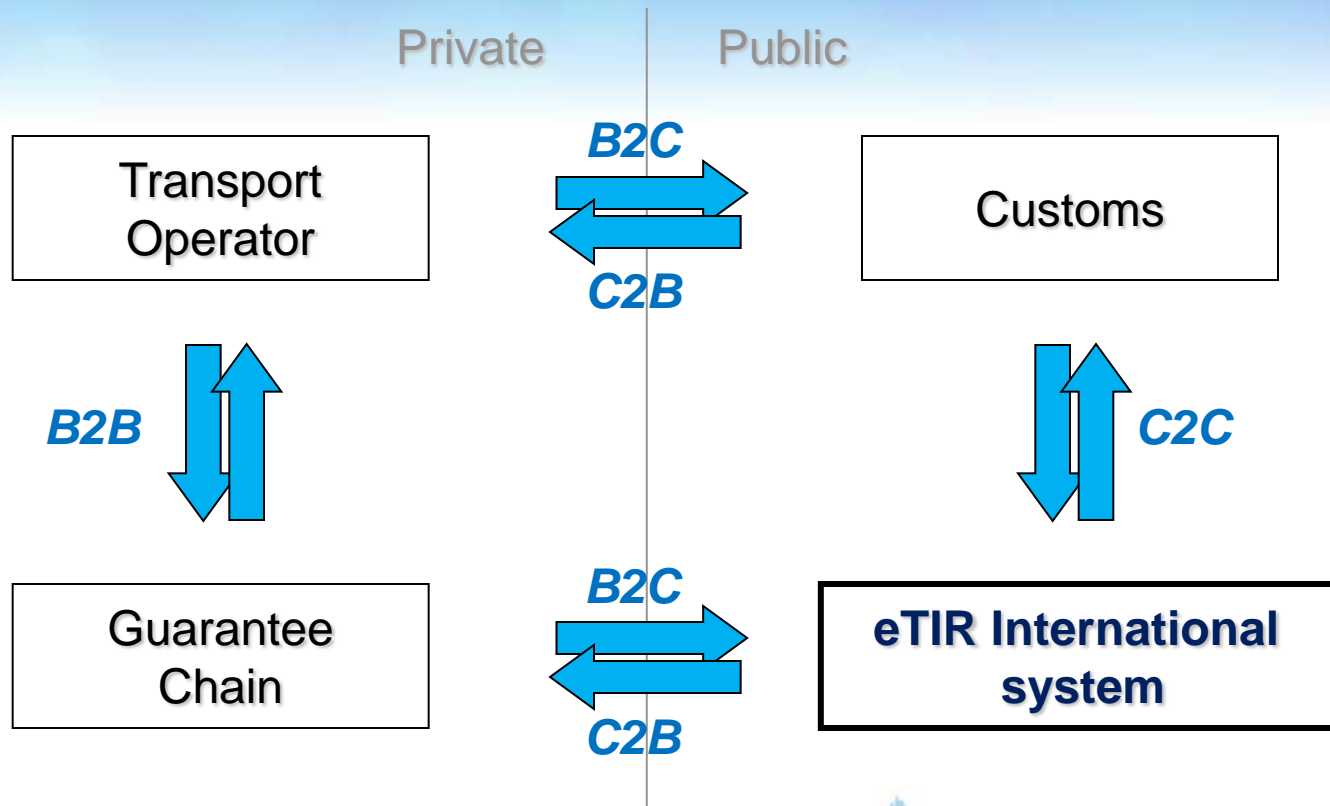

TIR computerization status

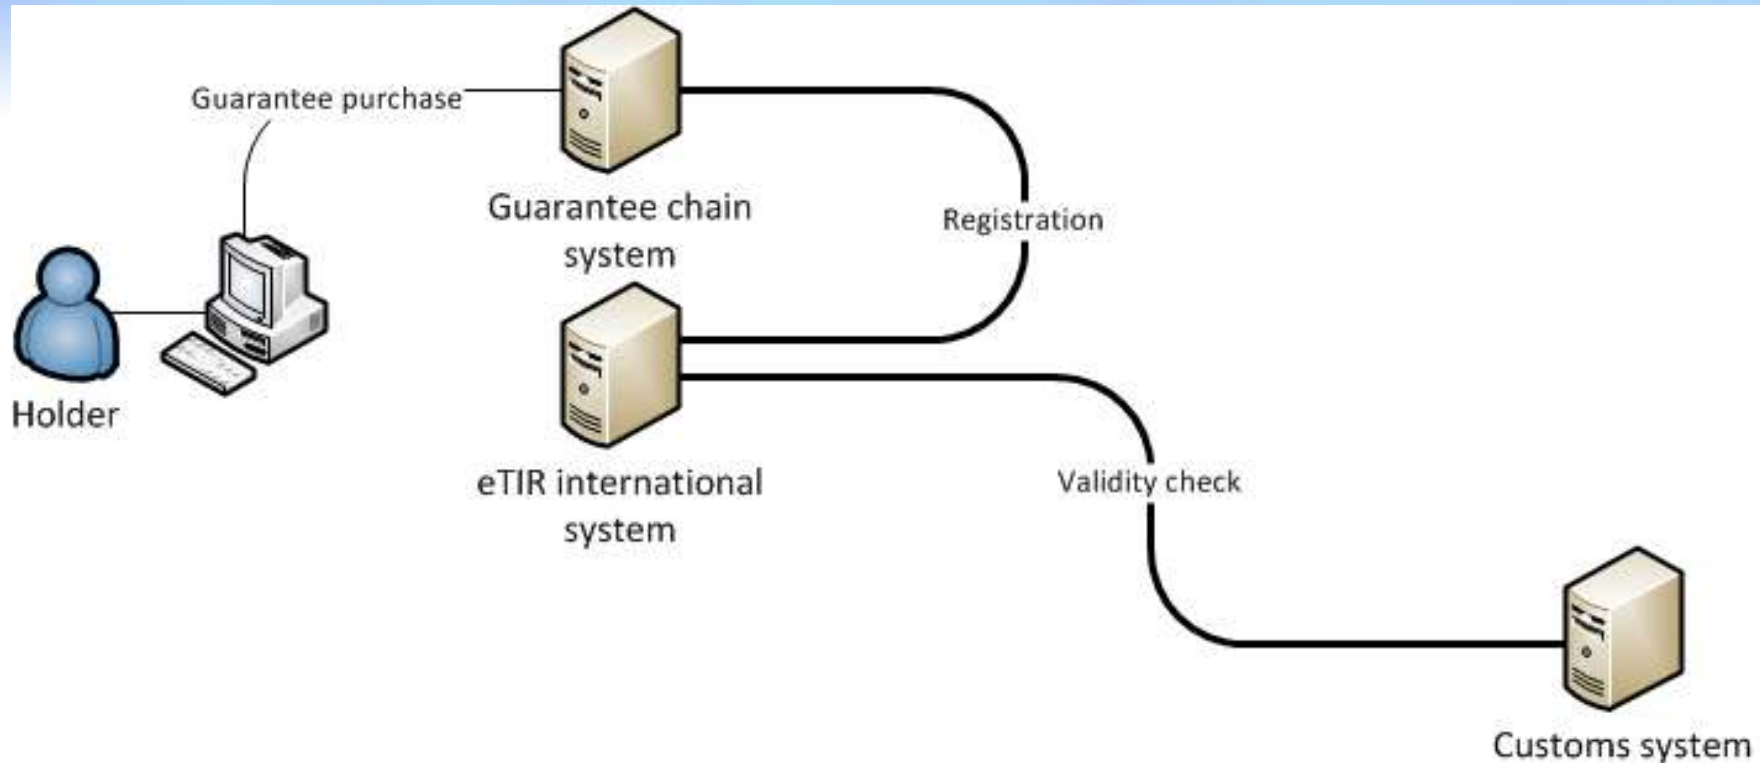

Objective: The eTIR system: a new public private partnership

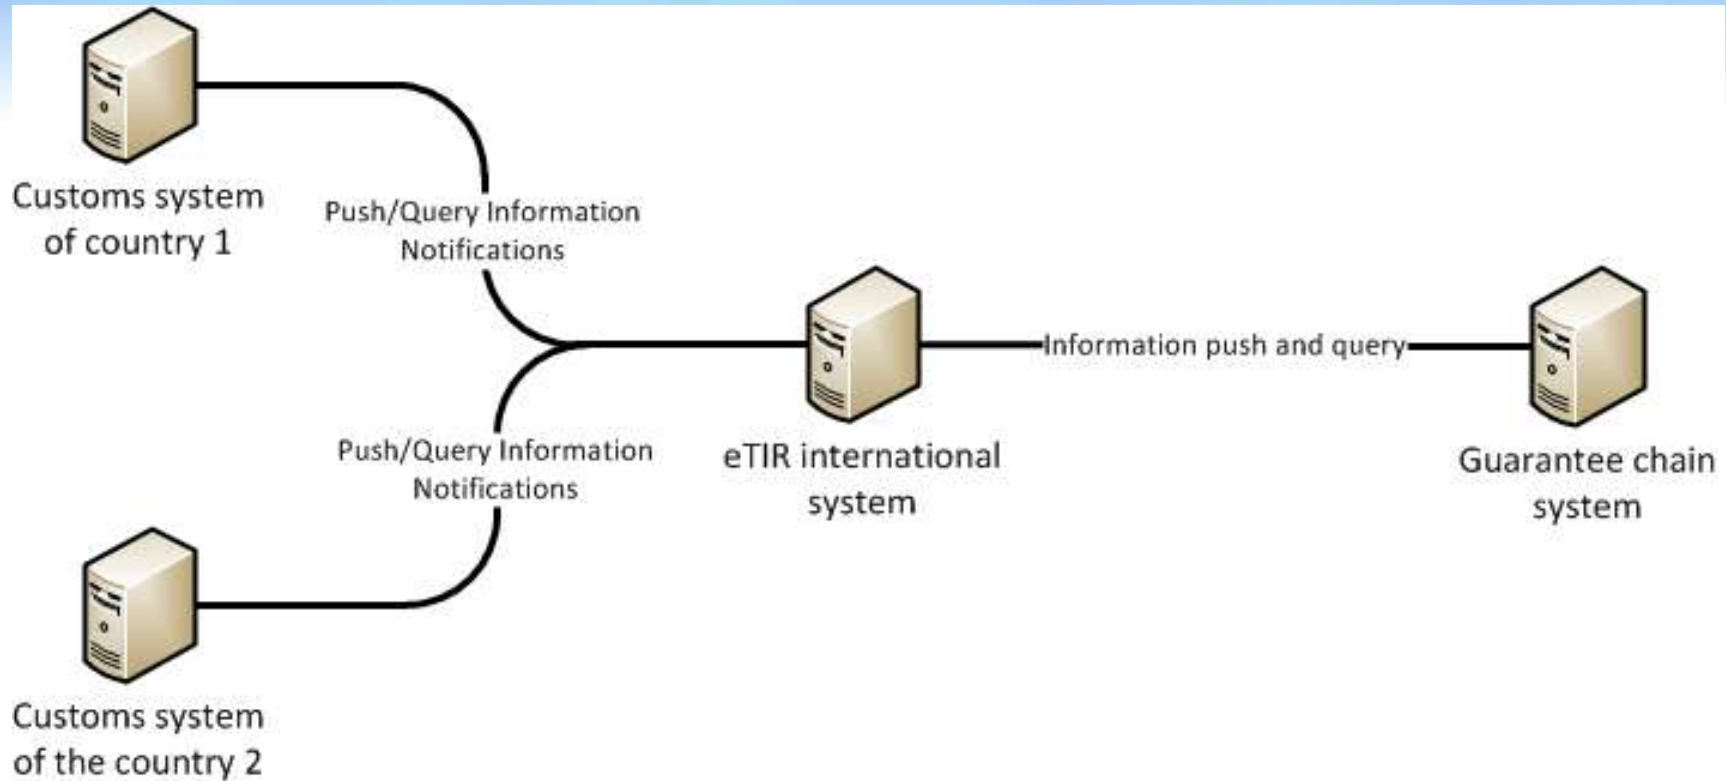

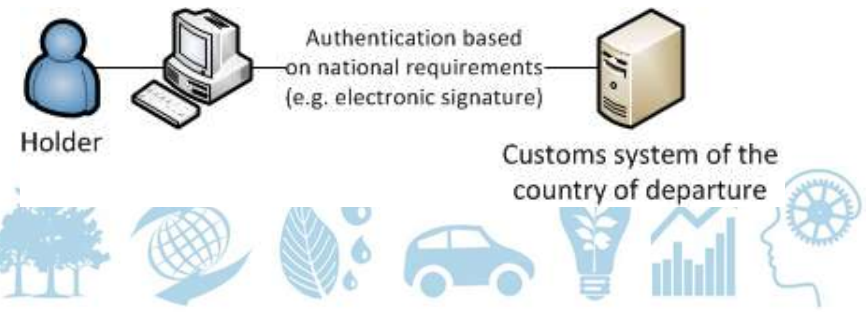

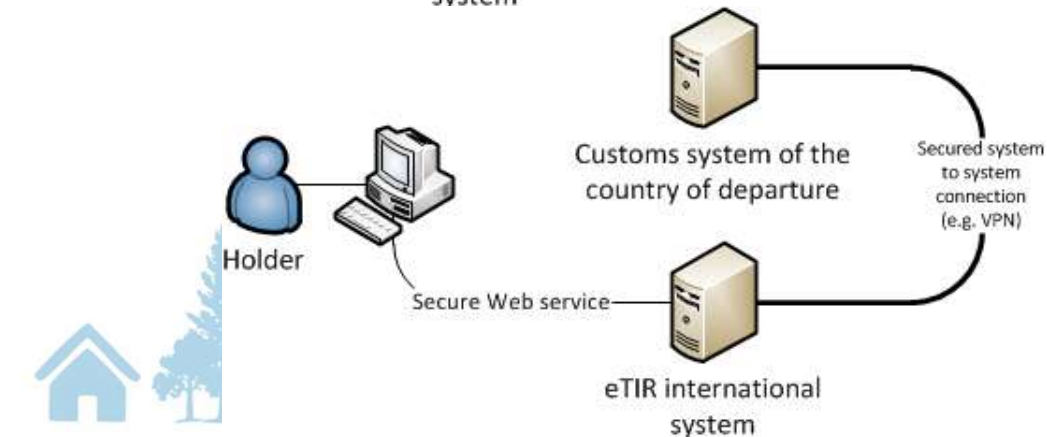

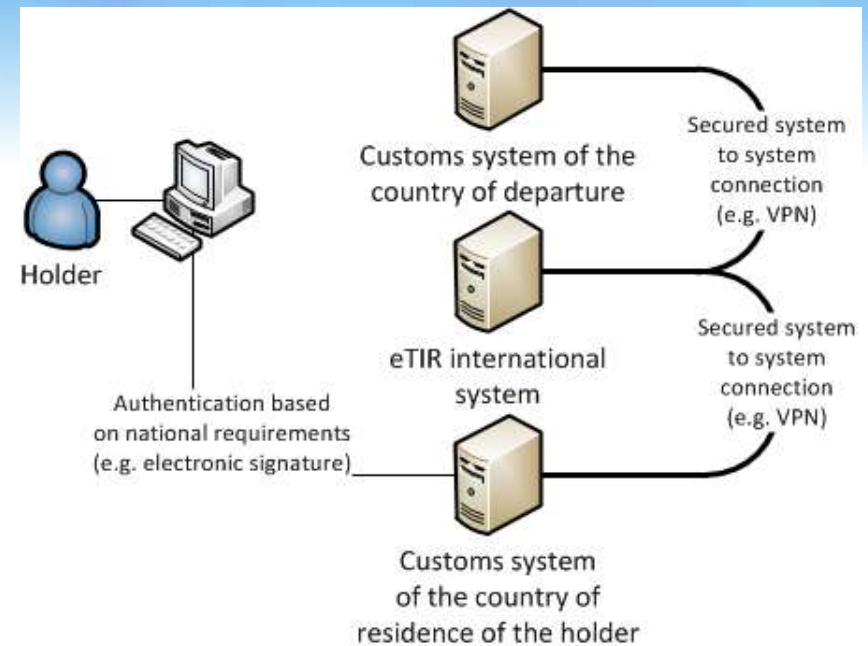

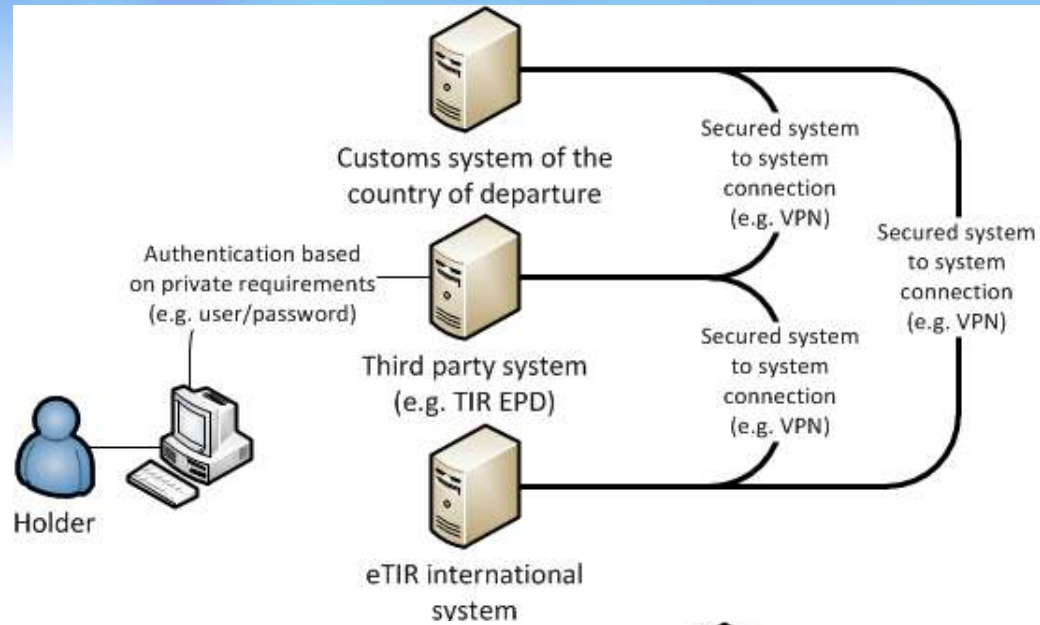

Main principles - Guarantee registration

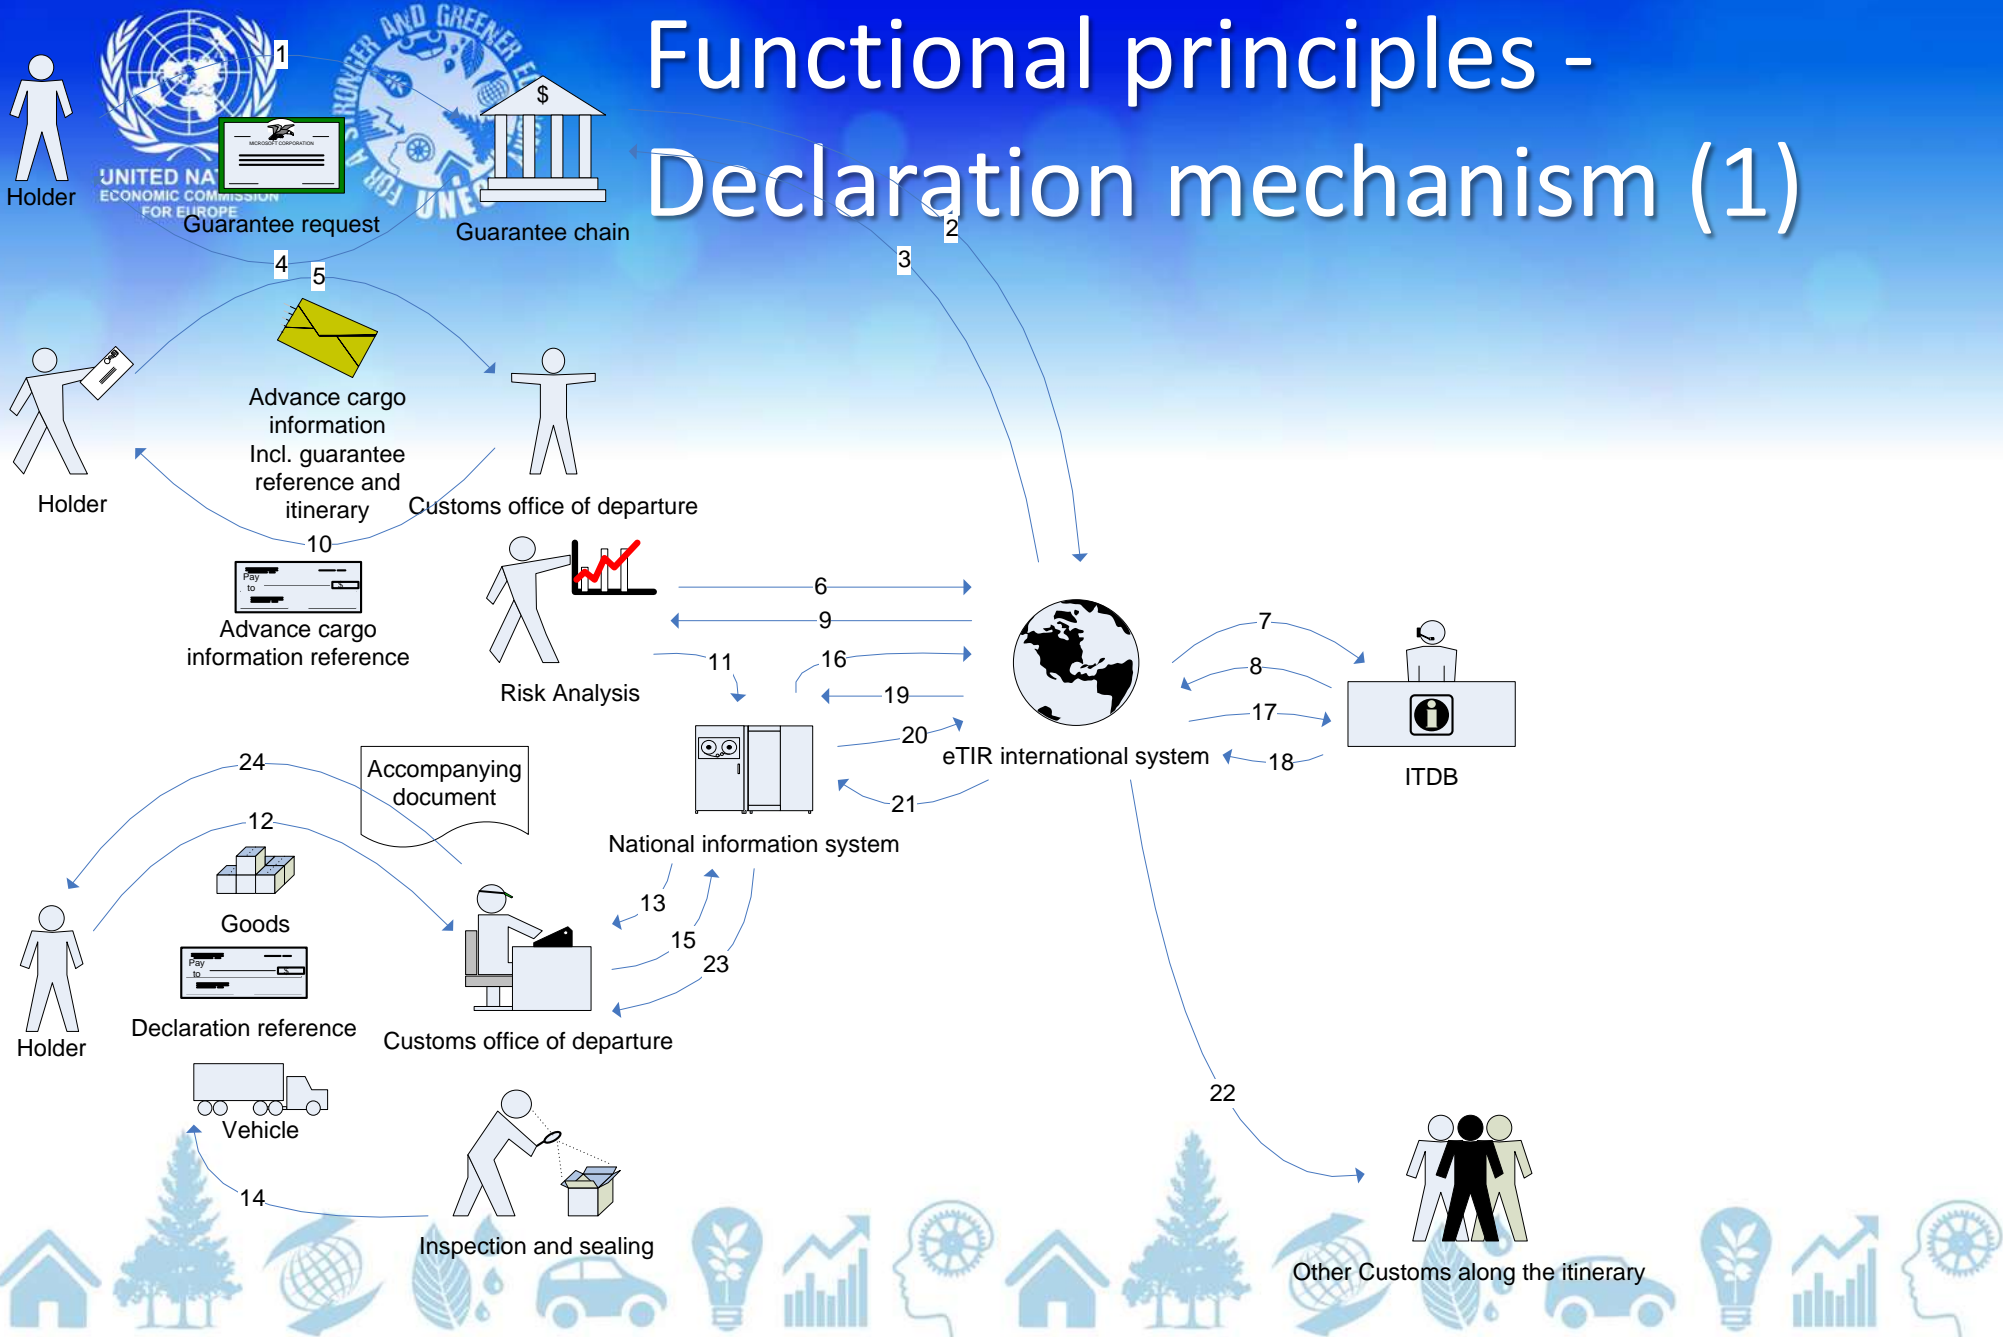

Main principles – C2C info exchange

Main principles - Declaration options

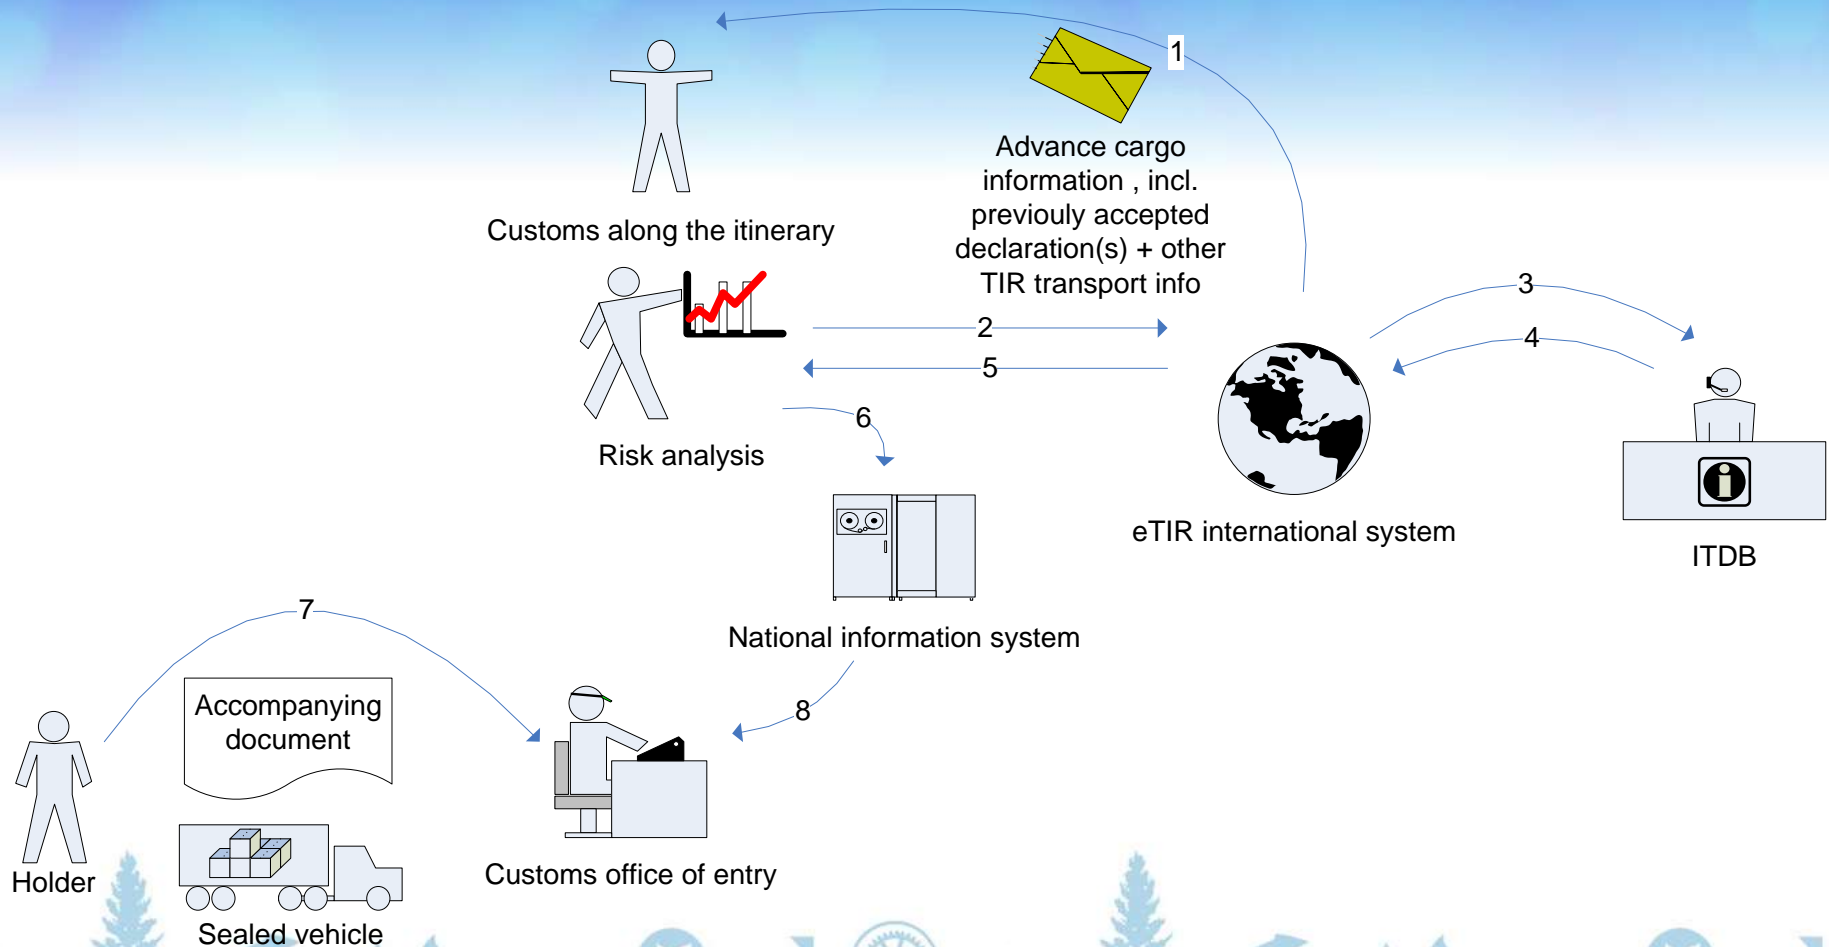

Functional principles - Declaration mechanism (1)

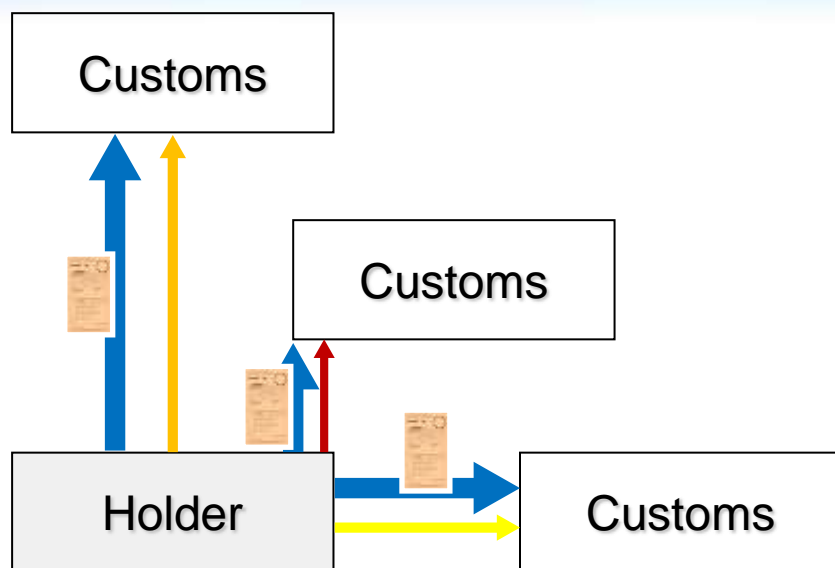

Functional principles - Declaration mechanism (2)

Diverging data requirements

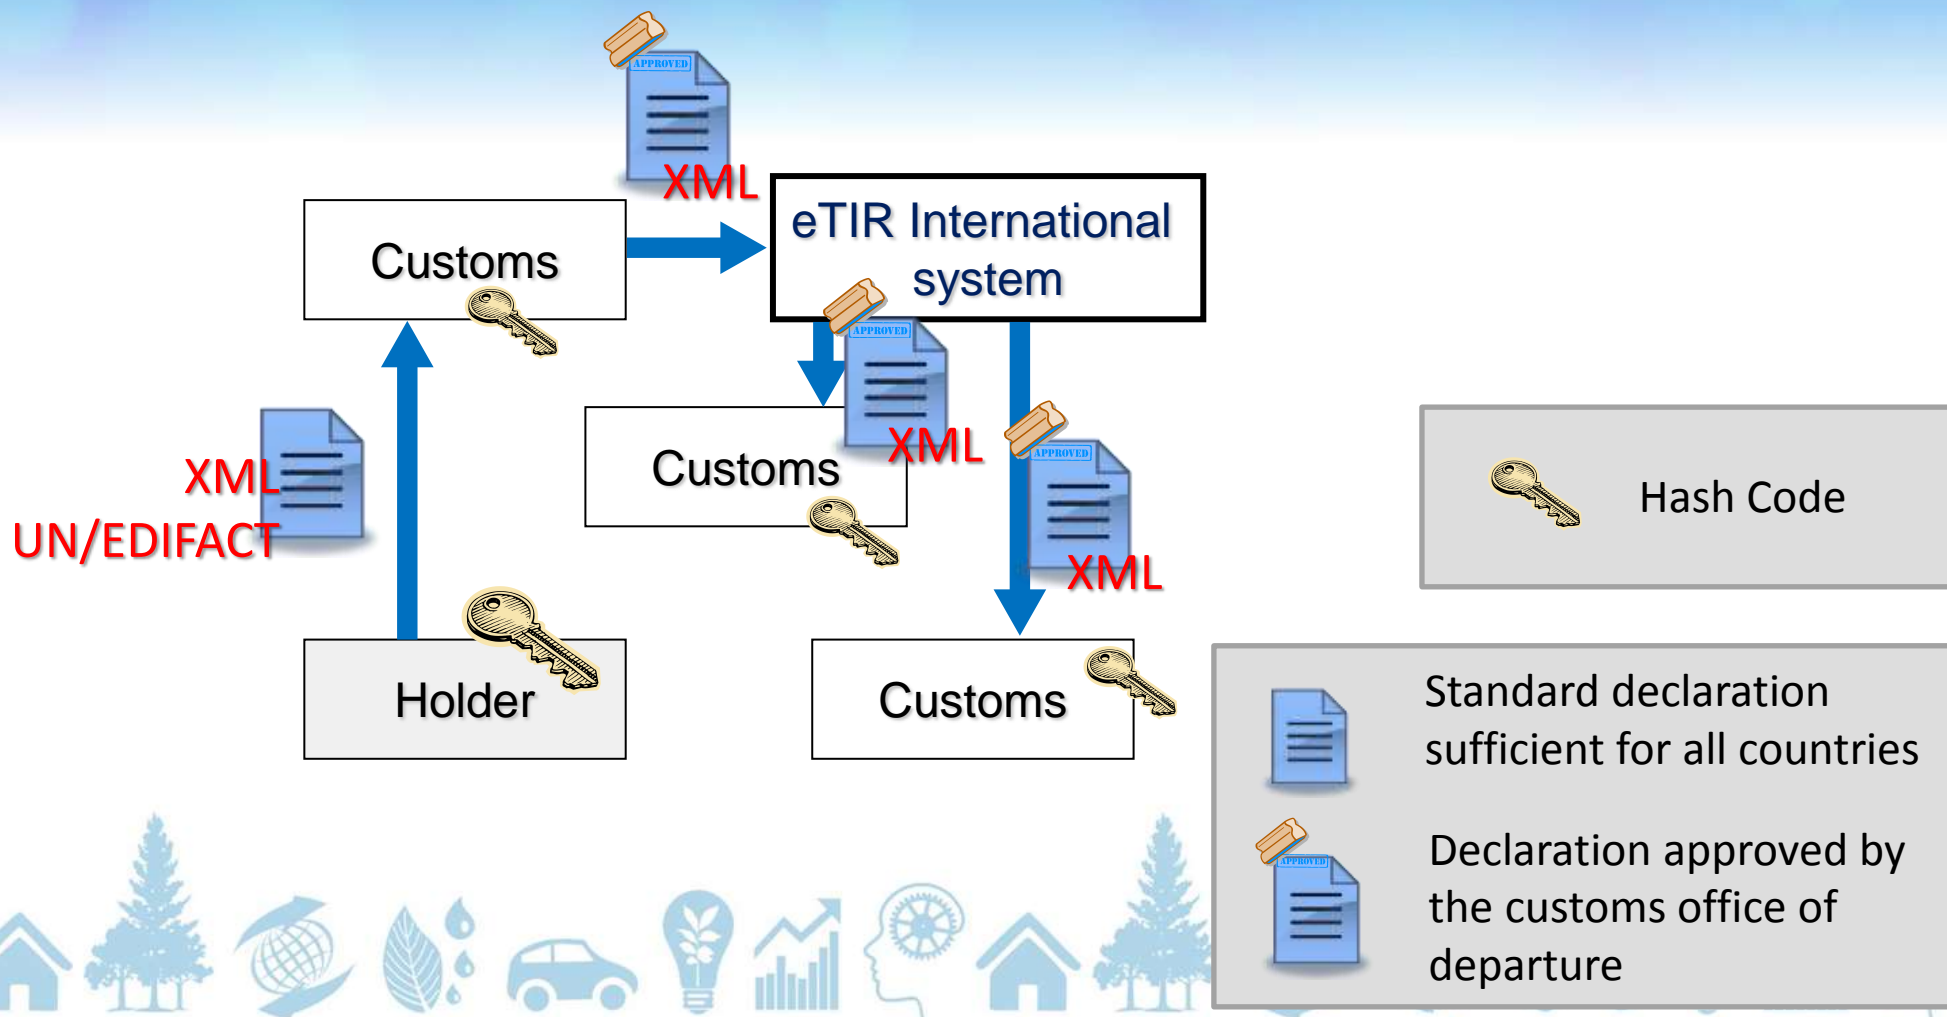

- Diverging additional requirement:
- - **electronic** safety and security data
- - additional **paper** documents

A group has been created at the WCO to possibly establish a new standard safety and security electronic message (i.e. a message that will contain more than the data elements recommended by the SAFE framework of standards)

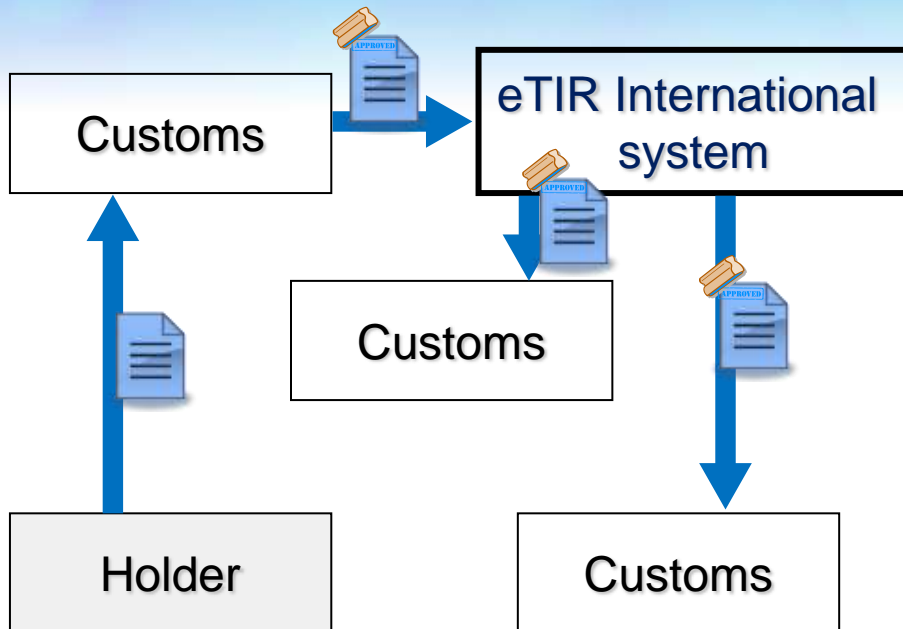

Declaration integrity

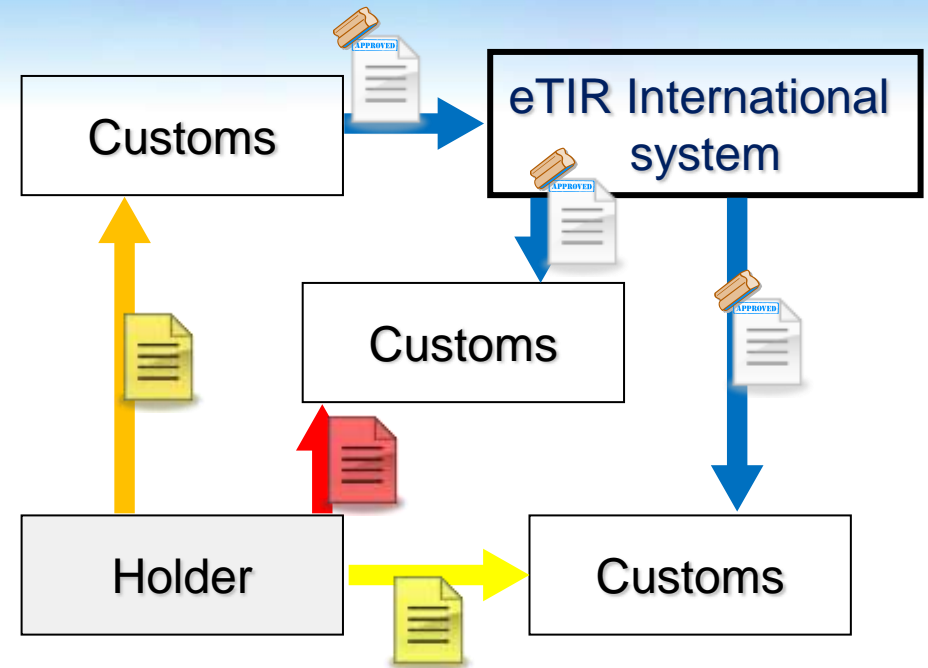

Alternative solution

Current solution

-  Standard declaration sufficient for all countries
-  Declaration approved by the customs office of departure

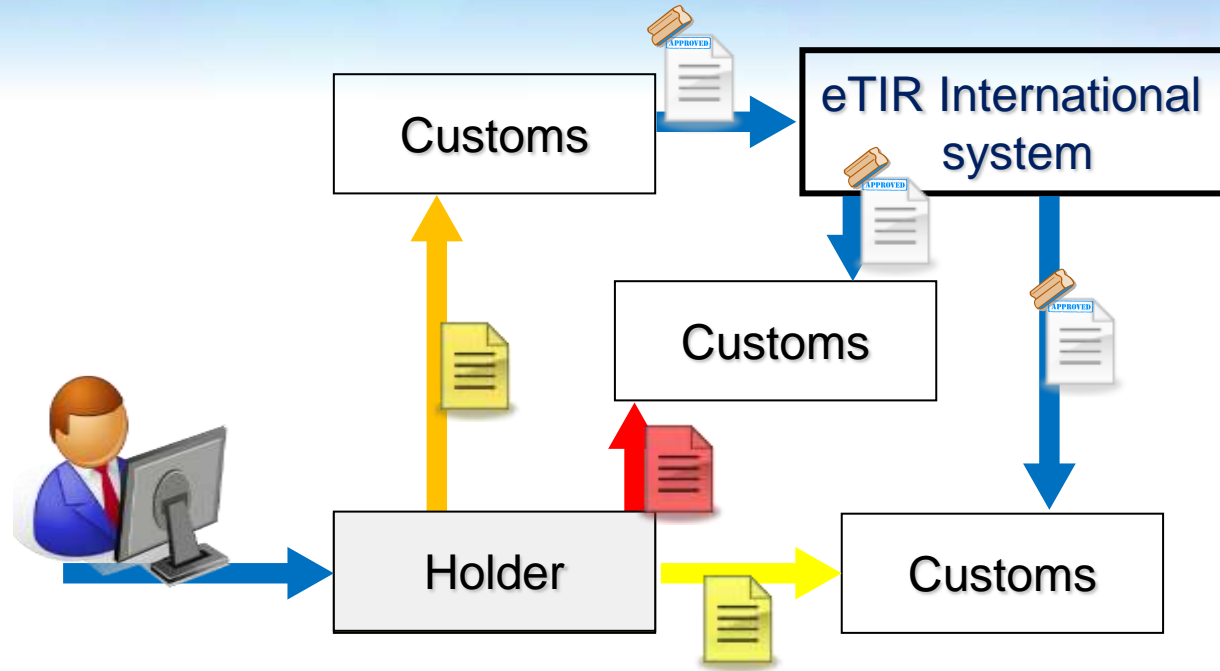

Alternative solution

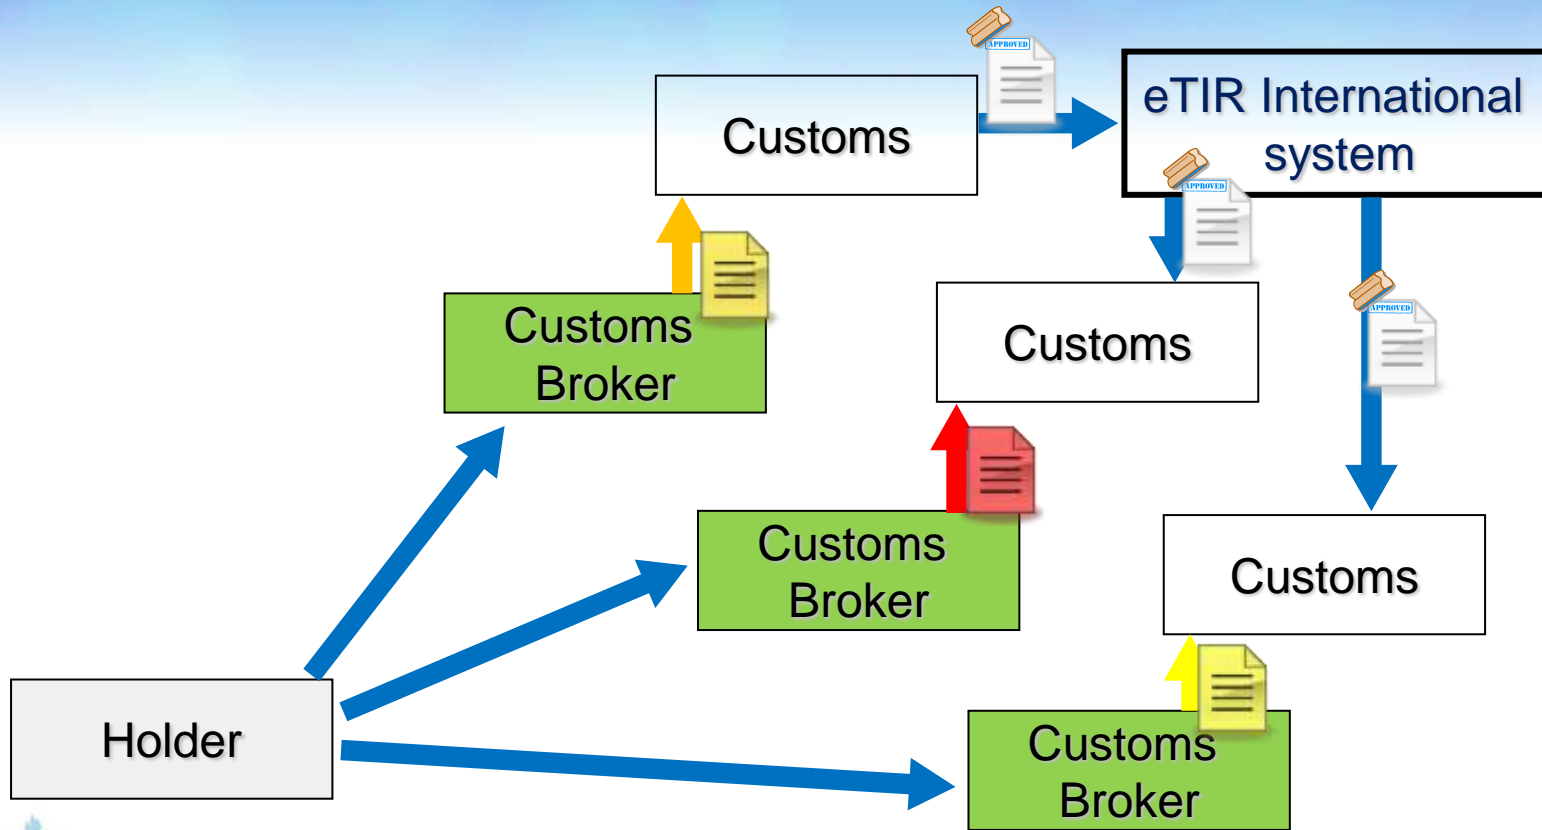

-  Differentiated
-  declaration data
-  and mechanisms

-  Approved minimum data set of common declaration data

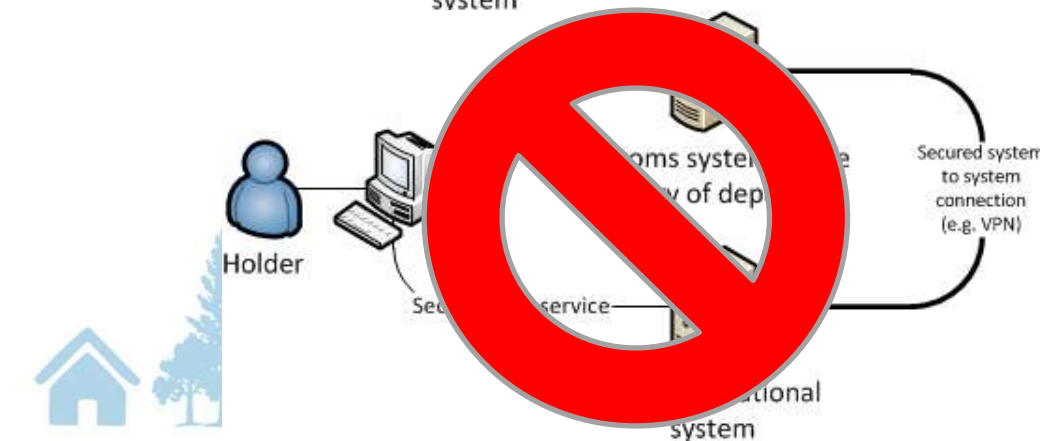

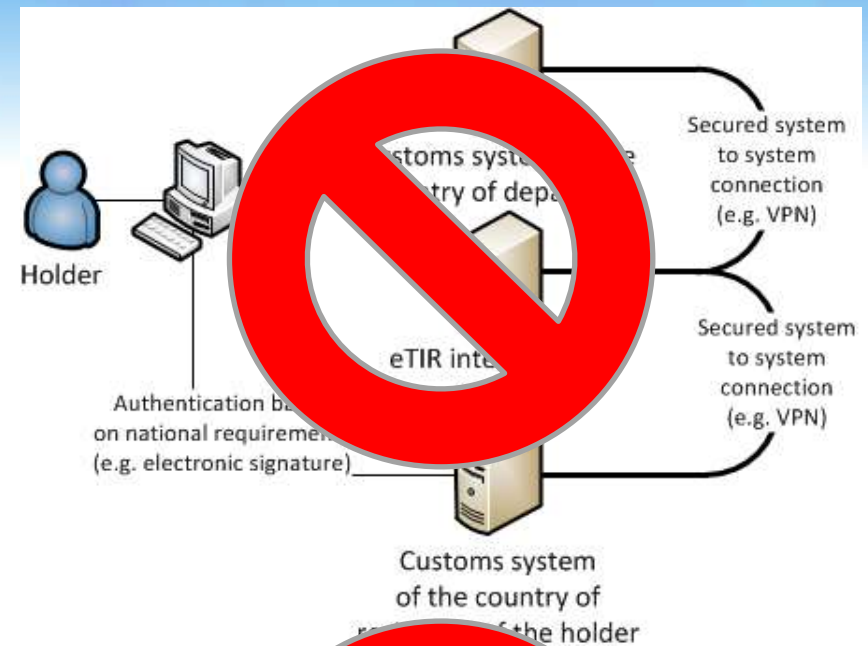

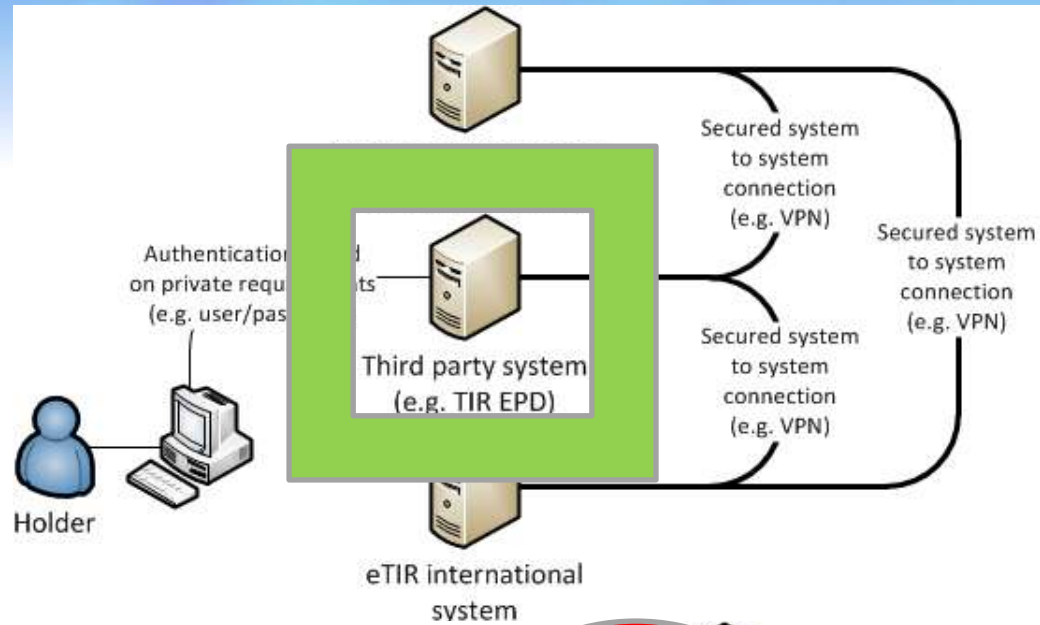

Consequences for TTF

Consequences for TTF

Consequences for TTF

Consequences on the GE.1 and the eTIR RM

- Prolong the GE.1 mandate to
 - Re-describe the declaration mechanisms (chap. 2 and annex VI)
 - Agree on a minimum data set for eTIR declaration
 - Check the eTIR RM for integrity

WP.30 recommendation

1. Introduce a direct submission of electronic declarations to customs (or via third parties) leaving countries the flexibility to ask different data set

- or -

2. Maintain the current declaration mechanisms and agree on a complete list of data elements for TIR
