UNITED NATIONS ECONOMIC COMMISSION FOR EUROPE

The United Nations Economic Commission for Europe (UNECE) is one of the five United Nations regional commissions, administered by the Economic and Social Council (ECOSOC). It was established in 1947 with the mandate to help rebuild post-war Europe, develop economic activity and strengthen economic relations among European countries, and between Europe and the rest of the world. During the Cold War, UNECE served as a unique forum for economic dialogue and cooperation between East and West. Despite the complexity of this period, significant achievements were made, with consensus reached on numerous harmonization and standardization agreements.

In the post-Cold War era, UNECE acquired not only many new member States, but also new functions. Since the early 1990s the organization has focused on analyses of the transition process, using its harmonization experience to facilitate the integration of Central and Eastern European countries into the global markets.

UNECE is the forum where the countries of western, central and eastern Europe, central Asia and North America — 56 countries in all – come together to forge the tools of their economic cooperation. That cooperation concerns economics, statistics, environment, transport, trade, sustainable energy, timber and habitat. The Commission offers a regional framework for the elaboration and harmonization of conventions, norms and standards. The Commission's experts provide technical assistance to the countries of South-East Europe and the Commonwealth of Independent States. This assistance takes the form of advisory services, training seminars and workshops where countries can share their experiences and best practices.

TRANSPORT IN UNECE

The UNECE Sustainable Transport Division is the secretariat of the Inland Transport Committee (ITC) and the ECOSOC Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonized System of Classification and Labelling of Chemicals. The ITC and its 17 working parties, as well as the ECOSOC Committee and its sub-committees are intergovernmental decision-making bodies that work to improve the daily lives of people and businesses around the world, in measurable ways and with concrete actions, to enhance traffic safety, environmental performance, energy efficiency and the competitiveness of the transport sector.

The *ECOSOC Committee* was set up in 1953 by the Secretary-General of the United Nations at the request of the Economic and Social Council to elaborate recommendations on the transport of dangerous goods. Its mandate was extended to the global (multi-sectoral) harmonization of systems of classification and labelling of chemicals in 1999. It is composed of experts from countries which possess the relevant expertise and experience in the international trade and transport of dangerous goods and chemicals. Its membership is restricted in order to reflect a proper geographical balance between all regions of the world and to ensure adequate participation of developing countries. Although the Committee is a subsidiary body of ECOSOC, the Secretary-General decided in 1963 that the secretariat services would be provided by the UNECE Sustainable Transport Division.

ITC is a unique intergovernmental forum that was set up in 1947 to support the reconstruction of transport connections in post-war Europe. Over the years, it has specialized in facilitating the harmonized and sustainable development of inland modes of transport. The main results of this persevering and ongoing work are reflected, among other things, (i) in 58 United Nations conventions and many more technical regulations, which are updated on a regular basis and provide an international legal framework for the sustainable development of national and international road, rail, inland water and intermodal transport, including the transport of dangerous goods, as well as the construction and inspection of road motor vehicles; (ii) in the Trans-European North-south Motorway, Trans-European Railway and the Euro-Asia Transport Links projects, that facilitate multi-country coordination of transport infrastructure investment programmes; (iii) in the TIR system, which is a global customs transit facilitation solution; (iv) in the tool called **For Future Inland Transport Systems (ForFITS)**, which can assist national and local governments to monitor carbon dioxide (CO₂) emissions coming from inland transport modes and to select and design climate change mitigation policies, based on their impact and adapted to local conditions; (v) in transport statistics — methods and data — that are internationally agreed on; (vi) in studies and reports that help transport policy development by addressing timely issues, based on cutting-edge research and analysis. ITC also devotes special attention to Intelligent Transport Services (ITS), sustainable urban mobility and city logistics, as well as to increasing the resilience of transport networks and services in response to climate change adaptation and security challenges.

In addition, the UNECE Sustainable Transport and Environment Divisions, together with the World Health Organization (WHO) — Europe, co-service the Transport Health and Environment Pan-European Programme (THE PEP).

Finally, as of 2015, the UNECE Sustainable Transport Division will be providing the secretariat services for the Secretary General's Special Envoy for Road Safety, Mr. Jean Todt.

INTRODUCTION

The fifty-fourth edition of the Statistics of Road Traffic Accidents in Europe and North America contains the basic statistics on road traffic accidents provided by the Governments of member States of the United Nations Economic Commission for Europe (UNECE). The publication is purely statistical in character. **The statistics in this document are limited to road traffic accidents involving personal injury, and exclude accidents where only damage to vehicles is reported.**

Issued simultaneously in English, French and Russian, this publication is used by government services and officials for the analysis of accidents, patterns of accidents and for planning improvements in road traffic safety. This is of particular relevance for the ECE region as in the decade 2005-2015, there were, on average, approximately 125,000 persons killed and 4.8 million persons injured annually in almost 3.5 million road accidents.

Statistics for Road Traffic Accidents in Europe and North America is divided into three basic parts with an annex. The first part sets out charts and summary tables on the overall situation and developments in road traffic accidents and casualties in ECE countries. The second part provides detailed statistics on road traffic accidents and includes the details of accidents such as location, time of occurrence, road condition, personal injuries and deaths. The third part shows background statistics on countries' vehicle fleets, estimates of vehicle-kilometres run and estimates of population by age group. The annex contains definitions.

Sources

The statistics appearing in this bulletin are compiled by the secretariat of the United Nations Economic Commission for Europe on the basis of replies to questionnaires submitted by member countries and from official national and international sources as of July 2017. Data for European Union and European Free Trade Agreement members are provided by CARE. For the primary indicators highlighted in the charts and summary tables, where data were missing, estimates were generated through interpolation/extrapolation in order to provide a full view of the progression of road safety in the ECE region over the past decade. These estimated values are clearly noted in the relevant tables.

Comparability of data

Data are given according to the commonly agreed upon definitions approved by the UNECE Inland Transport Committee (see annex). Footnotes in tables indicate where countries have provided explanations for departures from these definitions.

The comparability of data is also subject to differences in road accident reporting standards. Notably, the number of accidents and the number of injuries may be underreported in some countries due to administrative or practical limitations.¹

The data provided in this publication are also available on the Transport Division website at w3.unece.org/PXWeb/en. Website data are updated on a regular basis and thus may be more current than data in this publication.

Time period

Most of the statistics are presented in the form of time series. In general, the data for the latest year should be considered provisional while those of previous years are final.

¹ Derriks and Mak, *IRTAD Special Report: Underreporting of Road Traffic Casualties, 2007* (www.who.int/roadsafety/publications/irtad_underreporting.pdf).

Rounding

Where necessary, each figure has been rounded off to the nearest whole number. For this reason, there may occur in some series an apparent discrepancy between the sum of the constituent items and the totals shown.

ECE member countries and nomenclature

As of August 2017, the Economic Commission for Europe is composed of the following 56 member countries (organized into two regions for graphical comparisons in this report):

Europe/Asia — Albania, Andorra, Armenia, Austria, Azerbaijan, Belarus, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czechia, Denmark, Estonia, Finland, France, Georgia, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Kazakhstan, Kyrgyzstan, Latvia, Liechtenstein, Lithuania, Luxembourg, Malta, Monaco, Montenegro, Netherlands, Norway, Poland, Portugal, Republic of Moldova, Romania, Russian Federation, San Marino, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Tajikistan, The former Yugoslav Republic of Macedonia, Turkey, Turkmenistan, Ukraine, United Kingdom of Great Britain and Northern Ireland and Uzbekistan.

North America – Canada and United States of America

Data inquiries

The UNECE welcomes comments and suggestions on its statistical bulletins. Any comments or enquiries should be addressed to:

Road Safety in the ECE Region

Following the adoption of resolution 64/255 by the General Assembly in 2010, the period 2011-2020 was declared as the Decade of Action for Road Safety, with a goal to stabilize and then reduce the forecast level of road traffic fatalities around the world by increasing activities conducted at the national, regional and global levels. The data provided for the most recent decade where road safety data are available (2005-2015) show that in the ECE region progress has already been made in terms of the number of road accidents with injuries as well as the number of both fatalities and injuries in those accidents.

Between 2005 and 2015, the total number of fatalities in road traffic accidents decreased by almost 24% in the ECE region (see Figure 1). The total number of fatalities was approximately 115,600 in 2015 (151,700 in 2005).² This trend was particularly pronounced between 2007 and 2010 where an average annual decrease of more than 8 percent was reported.

Figure 1
Road traffic fatalities by region, 2005-2015

Source: UNECE Transport Database.

Note: Andorra, Monaco, San Marino and Turkmenistan are not included due to insufficient data availability. EU+EFTA refers to European Union and European Free Trade Agreement members.

Despite this positive trend, data on road traffic fatalities per inhabitant show large disparities between countries (see Figure 2). In 2015, the member States with the highest fatality rates reported incident rates almost 10 times higher than those with the lowest fatality rates. The ECE region as a whole reported approximately 87 fatalities per one million inhabitants in 2015.

² Excluding Andorra, Monaco, San Marino and Turkmenistan where insufficient data were available.

Figure 2
Road traffic fatalities per million inhabitants, by UNECE member State, 2015

* UNECE estimate
** CARE Road safety evolution (November 2016)

Source: UNECE Transport Database.
Note: FYR Macedonia = Former Yugoslav Republic of Macedonia. EU+EFTA = European Union and European Free Trade Agreement members.

While data were more limited on road traffic fatalities per passenger car (due to a lack of data on total number of passenger cars in some member States), data provided also highlight the large disparities between member States (see Figure 3). In 2015, several member States reported incident rates more than 10 times higher than those with the lowest fatality rates.

Figure 3

Road traffic fatalities per 1 000 passenger cars by selected UNECE member States, 2015

* UNECE estimate

** CARE Road safety evolution (November 2016)

Source: UNECE Transport Database.

Note: The FYR Macedonia = The Former Yugoslav Republic of Macedonia

Gender is also a factor to consider when assessing road safety. Figure 4 shows the percentage of females in total road fatalities in 2015. For the countries reporting data, this percentage varies between 16% in Armenia and 37% in Cyprus, which indicates that in all countries males make up a significant majority of road fatalities.

Figure 4

Female victims as a percentage of road accident fatalities, 2015

Source: UNECE Transport Database.

Note: In some countries, gender is unknown for a small percentage of victims.

The reasons for this could be attributed to the longer distances males typically drive,³ an increased likelihood of male drivers to be under the influence of alcohol,⁴ or other less documented factors such as different driving patterns or different attitudes to risk.

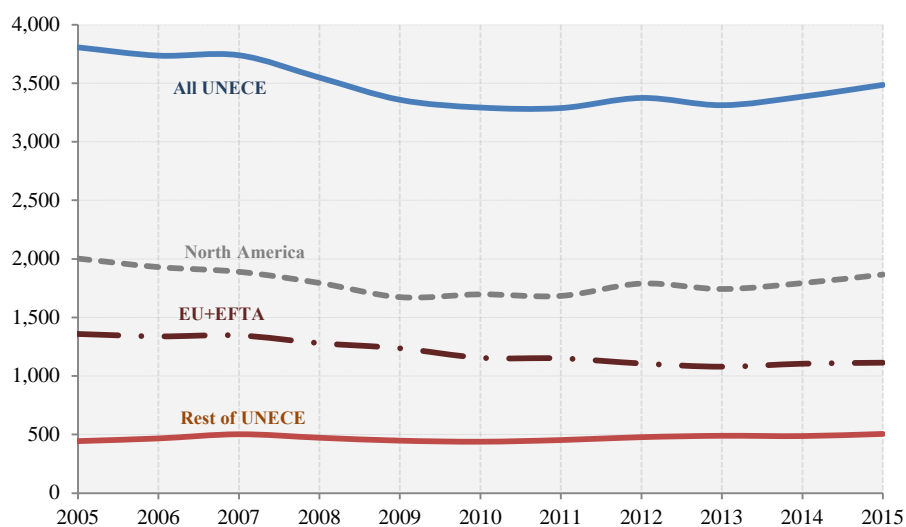

When looking at the limited number of countries reporting separately deaths of drivers, the gender imbalance is even more striking. For drivers, the percentage of female victims ranges from just 1% to 23%.

Figure 5 shows the number of road accidents with injuries. For the ECE region, a similar decrease to that of fatalities was reported between 2005 and 2015 with road accidents decreasing by almost 16 percent.

Figure 5

Road traffic accidents involving injury by region, 2005-2015

Thousands

Source: UNECE Transport Database.

Note: Andorra, Monaco, San Marino and Turkmenistan are not included due to insufficient data availability. EU+EFTA = European Union and European Free Trade Agreement members.

Notably, the number of road accidents with injuries reported in the *Rest of UNECE* group of countries is substantially less than those figures reported in North America and by European Union (EU) and European Free Trade Agreement (EFTA) members despite having more fatalities. This implies that the severity of road traffic accidents is lower in North America and EU/EFTA member countries than in the *Rest of UNECE* group of countries. Accordingly, in 2015 member States reported a wide range of numbers of persons killed per road traffic accident with injuries (see Figure 6). As measured by this ratio, the severity of accidents in the *Rest of UNECE* was more than four times as high as in North America and EU/EFTA. This partly reflects the potential gains still to be made in improving emergency medical response as well as differing passive vehicle safety measures in some member States. However, potential differences in the reporting of accidents between member States should also be considered.

³ See average annual distance per driver by gender in the United States in 2015 (www.fhwa.dot.gov/ohim/oh00/bar8.htm) and in New Zealand between 2010 and 2013 (www.transport.govt.nz/assets/Uploads/Research/Documents/Drivers-2014-y911-Final-v3.pdf)

⁴ See male proportion of alcohol-impaired driving episodes in the United States in 2012 (www.cdc.gov/mmwr/preview/mmwrhtml/mm6430a2.htm) and the comparison by gender of the percentage of male drivers in road traffic accidents involving injury who failed breath tests in Great Britain in 2015 (www.gov.uk/government/statistical-data-sets/ras51-reported-drinking-and-driving — see Table RAS51015).

Figure 6

Number of road traffic fatalities per 100 traffic accidents (severity), 2015

* UNECE estimate.

** CARE Road safety evolution (November 2016).

Source: UNECE Transport Database.

Note: The FYR Macedonia = The Former Yugoslav Republic of Macedonia

The UNECE, in cooperation with Eurostat and the International Transport Forum (ITF) has made efforts to minimize the differences in reporting between countries through the Glossary for Transport Statistics, the fourth edition of which is available at www.unece.org/fileadmin/DAM/trans/main/wp6/pdfdocs/glossen4.pdf. However, reporting in member States may remain unaligned in some cases and data should be analyzed carefully to avoid drawing misguided conclusions. In particular, studies have shown that non-fatal accidents and injuries resulting from such accidents may be underreported in some countries.⁵

⁵ Derriks and Mak, *IRTAD Special Report: Underreporting of Road Traffic Casualties*, 2007 (http://www.who.int/roadsafety/publications/irtad_underreporting.pdf)

** National statistics offices or CARE Road safety evolution (November 2016)

NOTES TO TABLE B**Country notes**

- 1) Persons are recorded as killed who die within 3 days as a result of the accident; persons who die later are recorded as injured
- 2) Persons are recorded as killed who die at the scene of the accident or within 7 days; persons who die later are recorded as injured
- 3) Data refer to continent only. Persons are recorded as killed who die at the scene of the accident or during or immediately after transport from the scene of the accident; persons who die later are recorded as injured
- 4) Persons are recorded as killed who die within 24 hours as a result of the accident; persons who die later are recorded as injured
- 5) Until 2015 figures on persons killed include the deaths only at the accident scene. Since 2015 figures on persons killed also include the deaths within 30 days after the traffic accidents due to related accident and its impacts for people injured and sent to health facilities
- 6) Great Britain only

NOTES TO TABLE C**Country notes**

- 1) Persons are recorded as killed who die within 3 days as a result of the accident; persons who die later are recorded as injured
- 2) Persons are recorded as killed who die at the scene of the accident or within 7 days; persons who die later are recorded as injured
- 3) Time series data may not be comparable. Injured persons refer to persons who were hospitalized
- 4) Data refer to continent only. Persons are recorded as killed who die at the scene of the accident or during or immediately after transport from the scene of the accident; persons who die later are recorded as injured
- 5) Persons are recorded as killed who die within 24 hours as a result of the accident; persons who die later are recorded as injured
- 6) Until 2015 figures on persons killed include the deaths only at the accident scene. Since 2015 figures on persons killed also include the deaths within 30 days after the traffic accidents due to related accident and its impacts for people injured and sent to health facilities
- 7) Great Britain only

6 By road condition:									
61 - Dry road surface
62 - Other (wet, icy, etc.)
63 - Unknown

For notes and code see end of table.

NOTES TO TABLE 1**Country notes**

- 1) Persons are recorded as killed who die within 3 days as a result of the accident; persons who die later are recorded as injured
- 2) Includes motorways
- 3) Includes data for *Twilight or unknown*
- 4) Persons are recorded as killed who die at the scene of the accident or within 7 days; persons who die later are recorded as injured
- 5) *Injured persons* refer to persons who were hospitalized
- 6) Data refer to continent only. Persons are recorded as killed who die at the scene of the accident or during or immediately after transport from the scene of the accident; persons who die later are recorded as injured
- 7) Persons are recorded as killed who die within 24 hours as a result of the accident; persons who die later are recorded as injured
- 8) Until 2015 figures on persons killed include the deaths only at the accident scene. Since 2015 figures on persons killed also include the deaths within 30 days after the traffic accidents due to related accident impacts for people injured and sent to health facilities
- 9) Great Britain only

2. Road traffic accidents involving personal injury by nature of accident

NOTES TO TABLE 2**Country notes**

- 1) Includes motorways
- 2) Persons are recorded as killed who die within 3 days as a result of the accident; persons who die later are recorded as injured
- 3) Persons are recorded as killed who die at the scene of the accident or within 7 days; persons who die later are recorded as injured
- 4) *Injured persons* refer to persons who were hospitalized
- 5) Data refer to continent only. Persons are recorded as killed who die at the scene of the accident or during or immediately after transport from the scene of the accident; persons who die later are recorded as injured
- 6) Breakdown does not sum to total as data from accidents on motorways within built-up areas are included
- 7) Persons are recorded as killed who die within 24 hours as a result of the accident; persons who die later are recorded as injured
- 8) Until year 2015 figures on persons killed include the deaths only at the accident scene; however since year 2015 figures on persons killed also include the deaths within 30 days after the traffic accidents due to related accident and its impacts for people injured and sent to health facilities
- 9) Great Britain only

NOTES TO TABLE 3 (a)**General notes**

Areas are shaded where data do not apply

The sum of subtotals may not be equal to the total where certain subtotals are missing

Country notes

- 1) 18-19 years old
- 2) 20-24 years old
- 3) 0-7 years old
- 4) 8-16 years old
- 5) 17-25 years old
- 6) 26-60 years old
- 7) More than 60 years old
- 8) 0-16 years old
- 9) Persons are recorded as killed who die within 3 days as a result of the accident; persons who die later are recorded as injured
- 10) Persons are recorded as killed who die at the scene of the accident or within 7 days; persons who die later are recorded as injured
- 11) Injured persons refer to persons who were hospitalized
- 12) Data refer to continent only. Persons are recorded as killed who die at the scene of the accident or during or immediately after transport
- 13) Persons are recorded as killed who die within 24 hours as a result of the accident; persons who die later are recorded as injured
- 14) Until year 2015 figures on persons killed include the deaths only at the accident scene; however since year 2015 figures on persons killed also include the deaths within 30 days after the traffic accidents due to related accident and its impacts for people injured and sent to health facilities
- 15) Great Britain only

NOTES TO TABLE 4**Explanation of code**

- A** = Mopeds
- B** = Motorcycles
- C** = Passenger cars, including taxis
- D** = Buses, coaches and trolleybuses
- E** = Lorries
- F** = Road tractors

Country notes

- 1) *Lorries* includes road tractors
- 2) *Mopeds* includes mopeds with engines 50 cc or less
- 3) *Motor coaches, buses, etc.* excludes trolleybuses
- 4) *Motor coaches, buses, etc.* include trolleybuses only
- 5) Data from 2010 onward reflect changes in rules regarding the removal of vehicles from the register. As a result, data before this year are not comparable with more recent data
- 6) The state enterprise Regitra of the Republic of Lithuania deregistered vehicles whose compulsory technical inspection or vehicle owner's compulsory civil liability insurance expired by 1 July 2014
- 7) *Motorcycles* includes 3-wheelers and quadricycles
- 8) *Mopeds* refer only to class 1 mopeds
- 9) *Motor coaches, buses, etc.* include trolleybuses only in 2012
- 10) Great Britain only
- 11) Passenger vehicle data and lorry data from 2006 onward may not be comparable with earlier data due to changes in categorization of vehicles

5. Estimated vehicle-kilometres run

NOTES TO TABLE 5**Explanation of code**

- A = Mopeds
- B = Motorcycles
- C = Passenger cars, including taxis
- D = Buses, coaches and trolleybuses
- E = Lorries and road tractors

Country notes

- 1) Vehicle-kilometres for *Lorries and road tractors* refer to lorries. Passenger-kilometres for "passenger cars" refer to taxis
- 2) Vehicle-kilometres refers to only vehicles with national registration. *Vehicles-kilometres* for *Lorries and road tractors* refers to only vehicles above 6 tonnes
- 3) *Vehicle-kilometres* include exempt and other vehicles
- 4) *Vehicle-kilometres* refers to transport on roads outside built-up areas
- 5) *Vehicle kilometres* includes agricultural tractors. *Vehicle kilometres* for *Motorcycles* and *Motor coaches, Buses, etc.* exclude foreign vehicles
- 6) *Motorcycles* includes mopeds
- 7) *Vehicle-kilometres* for *Passenger cars* and *Motor coaches, Buses, etc.* do not include travel on urban roads
- 8) Great Britain only. *Vehicle-kilometres* for *Passenger cars* refers to cars and taxis only
- 9) Passenger vehicle data and lorry data in 2010 may not be comparable with 2005 due to changes in categorization of vehicles

ANNEX

DEFINITIONS¹ AND GENERAL NOTES

A. Definitions relevant to the tables of this Bulletin

Injury accident: Any accident involving at least one road vehicle in motion on a public road or private road to which the public has right of access, resulting in at least one injured or killed person.

A suicide or an attempted suicide is not an accident but an incident caused by a deliberate act to injure oneself fatally. However, if a suicide or an attempted suicide causes injury to another road user, then the incident is regarded as an injury accident.

Included are: collisions between road vehicles; between road vehicles and pedestrians; between road vehicles and animals or fixed obstacles and with one road vehicle alone. Included are collisions between road and rail vehicles. Multi-vehicle collisions are counted as only one accident provided that any successive collisions happen at very short intervals. Injury accident excludes accidents incurring only material damage.

Excluded are terrorist acts.

Fatal accident: Any injury accident resulting in a person killed.

Non-fatal accident: Any injury accident other than a fatal accident.

Casualty: Any person killed or injured as a result of an injury accident.

Person killed: Any person killed immediately or dying within 30 days as a result of an injury accident, excluding suicides.

A killed person is excluded if the competent authority declares the cause of death to be suicide, i.e. a deliberate act to injure oneself resulting in death. For countries that do not apply the threshold of 30 days, conversion coefficients are estimated so that comparisons on the basis of the 30 day-definition can be made.

Person injured: Any person who as result of an injury accident was not killed immediately or not dying within 30 days, but who sustained an injury, normally needing medical treatment, excluding attempted suicides.

Person seriously injured: Any person injured who was hospitalized for a period of more than 24 hours.

Person slightly injured: Any person injured excluding persons seriously injured.

Persons with lesser wounds, such as minor cuts and bruises are not normally recorded as injured.

Driver involved in an injury accident: Any person involved in an injury accident who was driving a road vehicle at the time of the accident.

Passenger involved in an injury accident: Any person involved in an injury accident, other than a driver, who was in or on a road vehicle, or in the process of getting in or out of a road vehicle.

¹ UNECE, Intersecretariat Working Group on Transport Statistics (IWG), *Illustrated Glossary for Transport Statistics*, Fourth Edition (2009), (www.unece.org/trans/main/wp6/transstatglossmain.html).

Pedestrian involved in an injury accident: Any person involved in an injury accident other than a passenger or driver as defined above.

Included are occupants or persons pushing or pulling a child's carriage, an invalid chair, or any other small vehicle without an engine. Also included are persons pushing a cycle, moped, roller-skating, skateboarding, skiing or using similar devices.

Accident between road vehicle and pedestrian: Any injury accident involving one or more road vehicle and one or more pedestrian.

Included are accidents irrespective of whether a pedestrian was involved in the first or a later phase of the accident and whether a pedestrian was injured or killed on or off the road.

Single road vehicle accident: Any injury accident in which only one road vehicle is involved.

Included are accidents of vehicles trying to avoid collision and veering off the road, or accidents caused by collision with obstruction or animals on the road. Excluded are collisions with pedestrians and parked vehicles.

Multi-vehicle road accident: Any injury accident involving two or more road vehicles only.

The following types of injury accidents involving two or more road vehicles are:

a) Rear-end collision: collision with another vehicle using the same lane of a carriageway and moving in the same direction, slowing or temporarily halted.

Excluded are collisions with parked vehicles.

b) Head-on collision: collision with another vehicle using the same lane of a carriageway and moving in the opposite direction, slowing or temporarily halted.

Excluded are collisions with parked vehicles.

c) Collision due to crossing or turning: collision with another vehicle moving in a lateral direction due to crossing, leaving or entering a road.

Excluded are collisions with vehicles halted and waiting to turn which should be classified under (a) or (b).

d) Other collisions, including collisions with parked vehicles: collision occurring when driving side by side, overtaking or when changing lanes; or collision with a vehicle which has parked or stopped at the edge of a carriageway, on shoulders, marked parking spaces, footpaths or parking sites, etc.

Included in (d) are all collisions not covered by (a), (b) and (c). The constituent element for classification of accidents between vehicles is the first collision on the carriageway, or the first mechanical impact on the vehicle.

B. Other definitions

Road outside built-up areas: Road outside the boundaries of a built-up area, which is an area with entries and exits sign-posted as such.

Daylight: As reported by the police or other authorities.

Darkness: As reported by the police or other authorities.

Twilight (or unknown): As reported by the police or other authorities.

A residual category covering cases where daylight conditions were very poor or where no information on light conditions was available.

Dry road surface: A road surface not covered by water, snow, ice or other substances.

Other road surface: Any other road surface other than a dry road surface.

Motorway/freeway: Road, specially designed and built for motor traffic, which does not serve properties bordering on it, and which:

(a) Is provided, except at special points or temporarily, with separate carriageways for traffic in two directions, separated from each other, either by a dividing strip not intended for traffic, or exceptionally by other means;

(b) Has no crossings at the same level with any road, railway or tramway track, or footpath;

(c) Is specially sign-posted as a motorway and is reserved for specific categories of road motor vehicles.

Entry and exit lanes of motorways are included irrespective of the location of the sign-posts.

Urban motorways are also included.

Road inside a built-up area: urban road: A road within the boundaries of a built-up area, with entries and exits sign-posted as such.

Roads inside a built-up area often have a maximum speed limit of around 50 km/h.

Excluded are motorways, express roads and other roads of higher speed traversing the built-up area, if not signposted as built-up roads. Streets are included.

E road: The international "E" network consists of a system of reference roads as laid down in the European Agreement on Main International Arteries, Geneva, 15 November 1975 and its amendments.

Reference roads and intermediate roads (Class-A roads) have two-digit numbers; branch, link and connecting roads (Class-B roads) have three-digit numbers.

Road vehicle: A vehicle running on wheels and intended for use on roads.

Road motor vehicle: A road vehicle fitted with an engine whence it derives its sole means of propulsion, which is normally used for carrying persons or goods or for drawing, on the road, vehicles used for the carriage of persons or goods.

The statistics exclude motor vehicles running on rails.

(Bi)cycle: Any road vehicle which has at least two wheels and is propelled solely by the muscular energy of the persons on that vehicle, in particular by means of a pedal system, lever or handle (e.g. bicycles, tricycles, quadricycles and invalid carriages).

Included are cycles with supportive power unit.

Moped: Two, three or four-wheeled road vehicle which is fitted with an engine having a cylinder capacity not exceeding 50 cc. (3.05 cu. in.) and a maximum authorized design speed in accordance with national regulations.

Registered and non-registered mopeds in use are included, whether or not they have a number plate. Some countries do not register all mopeds.

Motor cycle: Two-, three- or four-wheeled road motor vehicle not exceeding 400 kg (900 lb.) of unladen weight. All such vehicles with a cylinder capacity of 50 cc or over are included, as are those under 50 cc which do not meet the definition of moped..

Passenger car: Road motor vehicle, other than a moped or a motor cycle, intended for the carriage of passengers and designed to seat no more than nine persons (including the driver).

Included are:

- (a) *Passenger cars;*
- (b) *Vans designed and used primarily for transport of passengers;*
- (c) *Taxis;*
- (d) *Hire cars;*
- (e) *Ambulances;*
- (f) *Motor homes.*

Excluded are light goods road vehicles as well as motor-coaches and buses and mini-buses/mini-coaches.

“Passenger car” includes microcars (needing no permit to be driven), taxis and passenger hire cars, provided that they have fewer than ten seats.

Motor coach, mini-coach, bus or mini-bus: Passenger road motor vehicle designed to seat more than nine persons (including the driver).

Included are mini-buses and mini-coaches designed to seat more than 9 persons (including the driver).

Trolleybus: Passenger road vehicle designed to seat more than nine persons (including the driver), which is connected to electric conductors and which is not rail-borne.

This term covers vehicles which may be used either as trolleybuses or as buses, if they have a motor independent of the main electric power supply.

Tram (street-car): Passenger or freight road vehicle designed to seat more than nine persons (including the driver), which is rail borne and connected to electric conductors or powered by diesel engine. The tramway is generally integrated into the urban road system.

Goods road vehicle: Road vehicle designed, exclusively or primarily, to carry goods.

Included are:

- a) *Light goods road vehicles with a gross vehicle weight of not more than 3 500 kg, designed exclusively or primarily, to carry goods, e.g. vans and pick-ups;*
- b) *Heavy goods road vehicles with a gross vehicle weight above 3 500 kg, designed, exclusively or primarily, to carry goods;*
- c) *Road tractors;*
- d) *Agricultural tractors permitted to use roads open to public traffic.*

Road Tractor: Road vehicle designed, exclusively or primarily, to haul other road vehicles which are not power-driven (mainly semi-trailers).

Agricultural tractors are excluded.

Articulated vehicle: Road tractor coupled to a semi-trailer.

Gross vehicle weight (Legally permissible maximum weight): Total of the weight of the vehicle (or combination of vehicles) including its load when stationary and ready for the road declared permissible by the competent authority of the country of registration.

This includes the weight of the driver and the maximum number of persons permitted to be carried.
