16 September 2022

With the review of the amended Protocol Acidification, Eutrophication and Ground-Ozone (Gothenburg Protocol) about to be round, expert groups under the UNECE Air Convention are now discussing latest findings to assess the effectiveness of measures.

The amended Protocol establishes legally binding emissions reduction commitments for 2020 beyond for major air pollutants: sulphur dioxide (SO₂), nitrogen oxides (NO_x), ammonia (NH₃) and Particulate Matter (PM_{2.5}). With 26 Parties, the Convention is the only international agreement for clean air in a number of countries.

Study confirms ecosystems more sensitive to nitrogen pollution than previously assumed

27 October 2022

Ecosystems such as forests, heaths and surface waters are more sensitive to atmospheric nitrogen pollution than previously thought, according to a new report published by the Coordination Centre for Effects under the UNECE Convention on Long-range Transboundary Air Pollution (Air Convention).

The report *Review and revision of empirical critical loads of nitrogen for Europe* provides revised and
